

Contents

1	Introduction to Environmental and Engineering Geology	1
	1.1 Definitions and scope of Chapter	1
	1.2 Soil and rock in environmental and engineering geology	3
	1.3 Introduction to site investigation	3
	1.4 Book layout	4
2	Geology and Geochemistry	6
	2.1 Introduction	5
	2.2 Underpinning paradigms	5
	2.2.1 Plate tectonics	9
	2.2.2 Rock cycle	13
	2.3 Geological time	14
	2.3.1 Rock and time units	14
	2.3.2 Correlation and the role of palaeontology	14
	2.3.3 Geochronology	16
	2.4 Igneous rocks	18
	2.4.1 Igneous intrusions	18
	2.4.2 Volcanic activity and extrusive rocks	21
	2.4.3 Texture of igneous rocks	24
	2.4.4 Igneous rock types	25
	2.5 Metamorphism and metamorphic rocks	27
	2.5.1 Thermal and contact metamorphism	27
	2.5.2 Dynamic metamorphism	28
	2.5.3 Regional metamorphism	29
	2.5.4 Metamorphic textures and structures	30
	2.5.5 Metasomatism	31
	2.5.6 Mineralisation	32
	2.6 Sedimentary rocks	33
	2.6.1 Bedding and sedimentary structures	35
	2.6.2 Sedimentary rock types	37
	2.6.3 Stratigraphy and stratification	41
	2.6.4 Unconformities	42
	2.7 Geological structures	43
	2.7.1 Folds	43
	2.7.2 Faults	45
	2.7.3 Discontinuities	47
	2.8 Conclusion	48

3	Geomorphology	53
3.1	Introduction	49
3.2	Underpinning paradigms	50
3.2.1	Diastrophism	50
3.2.2	Earth system processes, the rock cycle and geomorphological systems..	50
3.2.3	Terrain evaluation and landsystems	59
3.2.4	Models of landscape evolution	60
3.2.5	Climatically controlled landforms	62
3.2.6	Landforms controlled by tectonics, lithology and structure	62
3.2.7	Rate of landscape change	65
3.2.8	The Cenozoic Era and geomorphology	66
3.2.9	The palimpsest concept	68
3.3	Geomorphological processes and landforms	70
3.3.1	Weathering	70
3.3.2	Hillslopes	76
3.3.3	Rivers	86
3.3.4	Coasts and nearshore	97
3.3.5	Offshore	112
3.3.6	Aeolian	119
3.3.7	Glacial	126
3.3.8	Periglacial landscapes	138
3.4	Conclusions	145
4	Engineering Soils and Rocks	152
4.1	Introduction	146
4.2	Engineering properties of soils	146
4.2.1	Void ratio, grading and Atterberg limits	146
4.2.2	Soil classification and description	149
4.2.3	Shear strength of soil	153
4.2.4	Consolidation of fine-grained soils	156
4.2.5	Coarse-grained soils	159
4.2.6	Fine-grained sands, silts and loess	161
4.2.7	Clay deposits	162
4.2.8	Duricrusts	164
4.2.9	Salt pans, salinas, playas and sabkha	166
4.2.10	Dispersive soils	168
4.2.11	Glacial soils	169
4.2.12	Quick clay	177
4.2.13	Peat	178
4.3	Engineering properties of rocks	179
4.3.1	Description of rocks and rock masses	179
4.3.2	Engineering aspects of igneous and metamorphic rocks	179
4.3.3	Engineering aspects of sedimentary rocks	182

4.3.4	Discontinuity surveys	189
4.4	Conclusions	195
5	Pedological Soils	202
5.1	Introduction	196
5.2	Soil origin and importance	197
5.2.1	Origin	197
5.2.2	Fertility	199
5.3	Soil horizons	200
5.4	Soil types	202
5.5	Pedology and its use in environmental and engineering geology	208
6	Hydrology and Hydrogeology	216
6.1	Introduction	210
6.2	Basic hydrology	210
6.2.1	The hydrological cycle	210
6.2.2	Water flow	211
6.2.3	Sediment load	214
6.2.4	Channel form	216
6.3	Basic hydrogeology	220
6.3.1	Hydrogeological concepts	220
6.3.2	Water tables and aquifers	222
6.3.3	Porosity, permeability and specific yield	225
6.3.4	Groundwater and engineering	226
6.4	Conclusions	228
7	Site Investigation: Initial Stage (Desk studies, field mapping, remote sensing, GIS, ground models)	235
7.1	Introduction	229
7.2	Desk studies	229
7.3	Field mapping	230
7.3.1	Geomorphological mapping	230
7.3.2	Engineering geological field mapping	239
7.4	Remote sensing	242
7.4.1	Stereo aerial photographs	242
7.4.2	Multi- and hyperspectral imagery (airborne and satellite)	246
7.4.3	Satellite synthetic aperture radar interferometry (InSAR)	249
7.4.4	Light Direction and Ranging (LiDAR)	250
7.5	Geographical information systems (GIS)	252
7.6	Ground models	254
7.7	Output from the initial stage of the SI	259
8	Site Investigation Main Stage (Geophysics, Exploratory Holes, Testing and Reporting)	265
8.1	Introduction	261

8.2 Geophysics	262
8.2.1 Seismic methods	262
8.2.2 Electrical resistivity (ER)	267
8.2.3 Electromagnetic (EM) methods	269
8.2.4 Magnetic methods	270
8.2.5 Gravity methods	270
8.2.6 Reporting from a geophysical survey	272
8.3 Exploratory holes	272
8.3.1 Trenches and trial pits	272
8.3.2 Hand and power augers	274
8.3.3 Probes (including cone penetration testing)	274
8.3.4 Boreholes	276
8.3.5 Reporting on exploratory holes	280
8.4 In situ testing and instrumentation	281
8.4.1 In situ testing for soils and rocks	281
8.4.2 Instrumentation	287
8.5 Sampling and laboratory testing	291
8.5.1 Sampling	291
8.5.2 Soil sample testing	294
8.5.3 Rock sample testing	295
8.6 Reporting on the site investigation	296
9 Land-Use Planning, Hazards and Risk Management	301
9.1 Introduction	301
9.2 Land-use planning	301
9.2.1 Definition	301
9.2.2 Environmental geological maps for planning purposes	302
9.2.3 Environmental impact assessment (EIA)	306
9.3 Geological hazards and planning	307
9.3.1 Risk and natural hazards	308
9.3.2 Risk assessment	309
9.3.3 Risk management	310
9.3.4 The recurrence interval concept for planning development on river floodplains	313
9.3.5 Hazard and risk maps	315
9.4 Conclusions	317
10 Land Capability, Agriculture and Soil Erosion	319
10.1 Introduction	314
10.2 Soil surveys	314
10.3 Land capability studies	316
10.4 Soil erosion	320
10.4.1 Soil erosion by water	321
10.4.2 Soil erosion by wind	322

10.4.3	Role of vegetation in limiting soil erosion	323
10.4.4	Erosion control and conservation practices	324
10.4.5	Hazard assessment and erosion surveys	326
10.5	Desertification	328
10.6	Irrigation	331
10.7	Conclusions	332
11	Catastrophic Geohazards and Disasters	338
11.1	Introduction	333
11.2	Flooding (rivers and glaciers)	334
11.2.1	River floods	334
11.2.2	River control and flood warning systems	335
11.2.3	Glacial lake outbursts/floods (GLOBs/GLOFs)	338
11.3	Earthquakes	341
11.3.1	Earthquake magnitude, frequency and duration	341
11.3.2	Ground behaviour during earthquakes	343
11.3.3	Earthquake forecasting	345
11.3.4	Seismic hazards and zoning	348
11.4	Volcanic activity	350
11.4.1	Hazard frequency	350
11.4.2	Types of volcanic hazard	351
11.4.3	Hazard zoning	355
11.4.4	Prediction and protection	356
11.5	Mass movement	358
11.5.1	Landslides	358
11.5.2	Snow avalanches	262
11.5.3	Monitoring mass movement phenomena	262
11.5.4	Landslide hazard maps	363
11.5.5	Mass movement prevention and remediation	365
11.6	Coastal hazards	368
11.6.1	Storm surges	368
11.6.2	Tsunamis	370
11.6.3	Coastal protection	372
11.7	Conclusions	375
12	Pernicious Non-catastrophic Geohazards	383
12.1	Introduction	377
12.2	Wind action	377
12.2.1	The hazard	377
12.2.2	Dealing with the problem	379
12.3	Salt weathering	380
12.4	Dissolution of rocks	381
12.4.1	Carbonate rocks	381
12.4.2	Evaporitic rocks	384

12.5	Soil creep	386
12.6	Swell and shrinkage	387
12.7	Toxic gases	387
12.7.1	Radon	388
12.7.2	Volcanic gases	389
12.7.3	Methane and carbon dioxide	390
12.8	Conclusions	391
13	Mining and the Environment	398
13.1	Introduction	392
13.2	Mining operations	393
13.2.1	Surface mining	393
13.2.2	Subsurface mining	395
13.2.3	Dredge mining	398
13.3	Environmental consequences of mining	399
13.3.1	Subsidence	399
13.3.2	Waste materials from mining	407
13.3.3	Spontaneous combustion	415
13.3.4	Heap leaching	415
13.4	Contaminated land and mining	416
13.5	Dereliction and restoration	418
13.6	Conclusions	419
14	Waste, Contamination and Brownfield Sites	427
14.1	Introduction	420
14.2	Waste disposal	420
14.2.1	Scale of the problem	420
14.2.2	Domestic refuse and sanitary landfills	421
14.2.3	Hazardous waste	429
14.2.4	Radioactive waste	431
14.3	Contamination	435
14.3.1	Brownfield sites and contamination	435
14.3.2	Investigation	437
14.3.3	Managing land contamination and remediation	440
14.3.4	Derelict land/brownfield site restoration	443
14.3.5	Remediation of contaminated groundwater	444
14.3.6	Contamination in estuaries	445
14.4	Conclusions	446
15	Water Resources	454
15.1	Introduction	447
15.2	Groundwater	448
15.2.1	Wells	448
15.2.2	Safe yield	450
15.2.3	Artificial recharge	451

15.3	Surface water	452
15.3.1	Reservoirs	452
15.3.2	Dam sites	458
15.4	Conjunctive use	463
15.5	Water quality	464
15.5.1	Chemical characteristics	465
15.5.2	Physical characteristics	466
15.5.3	Biological characteristics	469
15.5.4	Industrial requirements	469
15.6	Groundwater pollution	470
15.6.1	Causes	470
15.6.2	Landfill and groundwater pollution	471
15.6.3	Saline intrusion	472
15.6.4	Nitrate pollution	473
15.6.5	Other causes of groundwater pollution	473
15.6.6	Monitoring groundwater quality	474
15.7	Surface water pollution	475
15.8	Conclusions	477
16	Geomaterials	485
16.1	Introduction	478
16.2	Aggregates	479
16.2.1	Unconsolidated sands and gravels	479
16.2.2	Crushed rock for concrete	481
16.2.3	Crushed rock for road aggregate	484
16.2.4	Armourstone	486
16.3	Mudrocks and brick manufacture	487
16.3.1	Raw material	487
16.3.2	Bricks	489
16.4	Special types of clay deposits	490
16.5	Building or dimension stone	491
16.5.1	Properties of stone	492
16.5.2	Working stone	493
16.5.3	Types of stone	494
16.6	Roofing and cladding	497
16.7	Cement, lime and plaster	498
16.8	Bulk fill	499
16.9	Earthen architecture	500
16.10	Conclusions	500
17	Construction	509
17.1	Introduction	501
17.2	Open excavations	501
17.2.1	Methods of excavation	503

17.2.2	Stability of excavations	506
17.2.3	Slope stabilisation and treatment	509
17.2.4	Treatment of groundwater	512
17.3	Tunnels and tunnelling	514
17.3.1	Problematic ground	515
17.3.2	Ground stress	517
17.3.3	Discontinuities and faults	518
17.3.4	Groundwater and gas	519
17.3.5	Ground temperatures	520
17.3.6	Tunnelling methods	521
17.3.7	Tunnel support	523
17.4	Shafts and raises	527
17.5	Underground caverns	528
17.6	Linear structures	529
17.6.1	Highways	530
17.6.2	Embankments	533
17.6.3	Railways	538
17.6.4	Bridges	539
17.6.5	Pipeline and cable trenches	541
17.6.6	Airfields	541
17.7	Building foundations	542
17.7.1	Foundation structures	542
17.7.2	Foundation design	545
17.7.3	Treatment of foundations	546
17.8	Coastal, nearshore and offshore construction	548
17.9	Conclusions	550
18	Emerging Issues and Professionalism	559
18.1	Introduction	551
18.2	Climate change	551
18.2.1	The role of the environmental and engineering geologist	551
18.2.2	Carbon sequestration	553
18.2.3	Rising sea levels	553
18.2.4	Melting of terrestrial ice	554
18.2.5	Increased storminess	555
18.2.6	Lessons from geological history	556
18.3	Renewable energy	557
18.3.1	Geothermal energy	558
18.3.2	Ground source heat pumps	558
18.3.3	Wave energy	560
18.3.4	Tidal energy	561
18.3.5	Hydroelectric power (HEP)	562
18.3.6	Wind farms	563

18.4 Geoconservation	564
18.4.1 Parks, monuments and World Heritage sites	564
18.4.2 Geoparks	566
18.4.3 Historic buildings	566
18.4.4 Geotourism	567
18.5 Geoforensics	571
18.6 Military geology	572
18.7 Professionalism	573
18.7.1 Professional recognition	573
18.7.2 Health and safety	576
18.7.3 Geoethics	577
18.7.4 Project management	578
18.8 Final observations	581
Suggestions for Further Reading	591
Books, papers and reports	583
Some journals of interest	597
