

Contents

1	A brief history of studies on biological membranes	5
2	Structure and function of the biological membrane	9
2.1	Overview of membrane functions	9
2.2	Molecular composition of the membranes	10
2.2.1	Membrane lipids	11
2.2.2	Membrane proteins	13
2.3	Membrane fluidity a motion of lipid components	14
2.3.1	Motion of phospholipid molecules	15
2.3.2	Factors influencing membrane fluidity	17
2.3.3	Lipid rafts	20
3	Self-assembly of lipids in biological membranes	22
3.1	Aqueous environment of living systems	22
3.1.1	Water form hydrogen bonds	23
3.1.2	Surface tension of water	23
3.1.3	Hydrophilic molecules in water – water as solvent	24
3.1.4	Hydrophobic molecules in water – hydrophobic effect	25
3.2	Self-assembly of amphiphilic molecules	27
4	Polymorphism of membrane lipids	29
4.1	Nomenclature of phospholipidic phases	29
4.2	Size of the lipid molecule	30
4.3	Packing parameter	30
4.3.1	Spherical micelle (L_I phase)	31
4.3.2	Cylindrical micelle (H_I phase)	31
4.3.3	Bilayers (L_α phase)	32
4.3.4	Inverted micelles (H_{II})	32
4.4	Factors influencing phase change	32
4.5	Biological relevance of lipid polymorphism	34
4.6	Aditivity of packing parameters	34
4.7	Closed structures – vesicles	35
5	Lateral pressure profile of phospholipidic bilayer	36
6	Mechanics of planar phospholipidic layer	39
6.1	Energetics of phospholipidic bilayer deformation	39
6.2	Elasticity of lipid bilayer	41

6.3	Stretching the bilayer	42
6.4	Bilayer bending	44
6.4.1	Strain of elastic plate in bending	44
6.4.2	Strain energy density in bending	45
6.4.3	Global and local bending	47
6.5	Combined membrane bending	49
6.5.1	Curvature of lipid bilayer	49
6.5.2	Notes on differential geometry	50
6.5.3	Helfrich curvature free energy	51
6.6	Shear	52
7	Mechanics of vesicles	53
7.1	Vesicle versus planar bilayer.	53
7.2	Energetic of vesicles	54
7.3	Energetics of axisymmetric vesicles	55
7.3.1	Constraints on area and volume	57
7.3.2	Calculation of the optimal shapes of axisymmetric vesicles.	58
8	Shape analysis	60
8.1	Sphere	60
8.2	Spherocylinder	61
8.3	Pancake shape	63
8.4	Double vesicle (budding)	65
8.5	Extreme stomatocyte (cup shape)	66
