Preface	v
Acknowledgements	ix
1 Introduction, Definitions, Goal	1
1.1 History of Chromatography	3
1.2 Definitions	12
1.3 Goal of the Book	15
References	17
2 The Mass Balance Equation of Chromatography and Its General Properties	19
2.1 Mass and Heat Balance Equations in Chromatography	21
2.2 Solution of the System of Mass Balance Equations	42
2.3 Important Definitions	57
References	63
3 Single-Component Equilibrium Isotherms	67
3.1 Fundamentals of Adsorption Equilibria	70
3.2 Models of Adsorption Isotherms in Liquid–Solid Equilibria	80
3.3 Adsorption and Affinity Energy Distribution	109
3.4 Influence of Experimental Conditions on Equilibrium Isotherms	117
3.5 Determination of Single-Component Isotherms	122
3.6 Data Processing and Assessment	135
References	144
4 Competitive Equilibrium Isotherms	151
4.1 Models of Multicomponent Competitive Adsorption Isotherms	153
4.2 Determination of Competitive Isotherms	191
References	216
5 Transfer Phenomena in Chromatography	221
5.1 Diffusion	222
5.2 Axial Dispersion and Mass Transfer Resistance in Porous Media	240
5.3 The Viscosity of Liquids	257
References	275
6 Linear Chromatography	281
6.1 The Plate Models	283
6.2 The Solution of the Mass Balance Equation	290
6.3 The General Rate Model of Chromatography	301
6.4 Moment Analysis and Plate Height Equations	310
6.5 The Statistic Approach	328
6.6 Sources of Band Asymmetry and Tailing in Linear Chromatography	335
6.7 Extension of Linear to Nonlinear Chromatography Models	341
References	342

7	Band Profiles of Single-Components with the Ideal Model	347
7.1	Retrospective of the Solution of the Ideal Model of Chromatography	349
7.2	Migration and Evolution of the Band Profile	351
7.3	Analytical Solutions of the Ideal Model	363
7.4	The Ideal Model in Gas Chromatography	377
7.5	Practical Relevance of Results of the Ideal Model	379
8	Band Profiles of Two Components with the Ideal Model	387
8.1	General Principle of the Solution	390
8.2	Elution of a Wide Band With Competitive Langmuir Isotherms . .	395
8.3	Elution of a Narrow Band with Competitive Langmuir Isotherms .	401
8.4	Method of Calculation of the Ideal Model Solution in a Specific Case	407
8.5	Dimensionless Plot of a Two-component Band System	414
8.6	The Displacement Effect	416
8.7	The Tag-Along Effect	419
8.8	The Ideal Model in Gas Chromatography	421
8.9	Practical Relevance of the Ideal Model	423
	References	436
9	Band Profiles in Displacement Chromatography with the Ideal Model	437
9.1	Steady State in the Displacement Mode. The Isotachic Train	439
9.2	The Theory of Characteristics	450
9.3	Coherence Theory	461
9.4	Practical Relevance of the Results of the Ideal Model	467
	References	468
10	Single-Component Profiles with the Equilibrium Dispersive Model	471
10.1	Fundamental Basis of the Equilibrium Dispersive Model	473
10.2	Approximate Analytical Solutions	476
10.3	Numerical Solutions of the Equilibrium-Dispersive Model	492
10.4	Results Obtained with the Equilibrium Dispersive Model	509
	References	527
11	Two-Component Band Profiles with the Equilibrium-Dispersive Model	531
11.1	Numerical Analysis of the Equilibrium-Dispersive Model	532
11.2	Applications of the Equilibrium-Dispersive Model	542
	References	567
12	Frontal Analysis, Displacement and the Equilibrium-Dispersive Model	569
12.1	Displacement Chromatography with a Nonideal Column	570
12.2	Applications of Displacement Chromatography	587
12.3	Comparison of Calculated and Experimental Results	599
	References	603

13 System Peaks with the Equilibrium–Dispersive Model	605
13.1 System Peaks in Linear Chromatography	606
13.2 High-Concentration System Peaks	626
References	647
14 Kinetic Models and Single-Component Problems	651
14.1 Solution of the Breakthrough Curve under Constant Pattern Con- dition	653
14.2 Analytical and Numerical Solutions of the Kinetic Models	669
14.3 Comparison Between the Various Kinetic Models	680
14.4 Results of Computer Experiments	687
14.5 Numerical Solution of the Lumped Pore Diffusion Model	689
14.6 The Monte Carlo Model of Nonlinear Chromatography	693
References	695
15 Gradient Elution Chromatography under Nonlinear Conditions	699
15.1 Retention Times and Band Profiles in Linear Chromatography	701
15.2 Retention of the Organic Modifier or Modulator	705
15.3 Numerical Solutions of Nonlinear Gradient Elution	711
15.4 Gradient Elution in Ion-Exchange Chromatography	726
References	731
16 Kinetic Models and Multicomponent Problems	735
16.1 Analytical Solution for Binary Mixture; Constant Pattern Behavior .	736
16.2 Linear Driving Force Model Approach	747
16.3 Numerical Solution of The General Rate Model of Chromatography	754
References	775
17 Simulated Moving Bed Chromatography	779
17.1 Introduction	780
17.2 Modeling of Simulated Moving Bed (SMB) Separations	783
17.3 Analytical Solution of the Linear, Ideal Model of SMB	785
17.4 Analytical Solution of the Linear, Nonideal Model of SMB	806
17.5 McCabe–Thiele Analysis	808
17.6 Optimization of the SMB Process	809
17.7 Nonlinear, Ideal Model of SMB	816
17.8 Recent Improvements in SMB Performance with New Operating Modes	826
17.9 Numerical Solutions for Nonlinear, Nonideal SMB	836
References	845
18 Optimization of the Experimental Conditions	849
18.1 Definitions	851
18.2 The Economics of Chromatographic Separations	857
18.3 Optimization Based on Theoretical Considerations	867
18.4 Optimization Using Numerical Solutions	883
18.5 Recycling Procedures	915

18.6 Practical Rules	920
18.7 Optimization of the SMB Process	924
References	935
Glossary of Symbols	939
Glossary of Terms	949
Index	969
