

CONTENTS IN BRIEF

1	THE SCIENCE OF CHEMISTRY, 1
2	THE ATOMIC NATURE OF MATTER, 36
3	THE COMPOSITION OF MOLECULES, 76
4	CHEMICAL REACTIONS AND STOICHIOMETRY, 136
5	THE BEHAVIOR OF GASES, 188
6	ATOMS AND LIGHT, 236
7	ATOMIC STRUCTURE AND PERIODICITY, 272
8	FUNDAMENTALS OF CHEMICAL BONDING, 320
9	CHEMICAL BONDING: MULTIPLE BONDS, 374
10	EFFECTS OF INTERMOLECULAR FORCES, 428
11	MACROMOLECULES, 490
12	CHEMICAL ENERGETICS, 550
13	SPONTANEITY OF CHEMICAL PROCESSES, 596
14	MECHANISMS OF CHEMICAL REACTIONS, 646
15	PRINCIPLES OF CHEMICAL EQUILIBRIUM, 710
16	AQUEOUS EQUILIBRIA, 758
17	ELECTRON TRANSFER REACTIONS: REDOX AND ELECTROCHEMISTRY, 816
18	THE CHEMISTRY OF LEWIS ACIDS AND BASES, 882
19	NUCLEAR CHEMISTRY AND RADIOCHEMISTRY, 924
A	SCIENTIFIC NOTATION, A-1
B	QUANTITATIVE OBSERVATIONS, A-5
C	SAMPLE CHAPTER SUMMARY, A-10
D	IONIZATION ENERGIES AND ELECTRON AFFINITIES OF THE FIRST 36 ELEMENTS, A-12
E	STANDARD THERMODYNAMIC FUNCTIONS, A-13
F	THE MATHEMATICS DESCRIBING CHANGE, A-21
G	EQUILIBRIUM CONSTANTS, A-27
H	STANDARD REDUCTION POTENTIALS (E°), A-29
I	THE TOP 50 INDUSTRIAL CHEMICALS, A-33
	SOLUTIONS TO SELECTED PROBLEMS, S-1
	GLOSSARY, G-1

CONTENTS

1 THE SCIENCE OF CHEMISTRY, 1

1.1 What is Chemistry? 1

Chemistry is an Experimental Science, 3

1.2 The Molecular Nature of Chemistry, 5

Molecules, 5

Symbols of the Elements, 6

Chemical Formulas, 7

1.3 The Periodic Table of the Elements, 9

Arrangement, 9

Metals, Nonmetals, and Metalloids, 9

Periodic Properties, 11

1.4 Characteristics of Matter, 12

Phases of Matter, 15

Transformations of Matter, 15

1.5 Measurements in Chemistry, 16

Physical Properties, 16

Magnitude, 17

Units, 18

Unit Conversions, 19

Precision, 21

1.6 Calculations in Chemistry, 23

Density, 24

Precision of Calculations, 25

1.7 Chemical Problem Solving, 28

Chapter Summary, 30

2 THE ATOMIC NATURE OF MATTER, 36

2.1 Atomic Theory, 37

Atoms Combine to Make Compounds, 40

Atoms are Constantly in Motion, 42

Dynamic Equilibrium, 44

2.2 Atomic Architecture: Electrons and Nuclei, 46

Gravitational Force, 46

Electrical Force, 46

Magnetism, 47

Electrons, 48

The Nucleus, 51

2.3 Atomic Diversity: The Elements, 54

Isotopes, 54

Mass Spectrometry, 57

2.4 Charged Atoms: Ions, 60

Ionic Compounds, 60

Ionic Solutions, 62

2.5 Conservation Laws, 63

Conservation of Atoms, 64

Conservation of Electrons, 64

Conservation of Mass, 65

Conservation of Energy, 66

Forms of Energy, 67

Chapter Summary, 70

3 THE COMPOSITION OF MOLECULES, 76

3.1 Representing Molecules, 77

Chemical Formulas, 78

Structural Formulas, 79

Three-Dimensional Models, 80

Line Structures, 81

3.2 Naming Chemical Compounds, 85

Common Names, 85

Naming Binary Compounds, 86

Binary Compounds of Hydrogen, 86

Carbon-Based Compounds, 87

3.3 Ionic Compounds, 88

Atomic Cations and Anions, 89

Polyatomic Ions, 89

Ionic Compounds, 90

Cations of Variable Charge, 91

Recognizing Ionic Compounds, 93

3.4 The Mole, 95

The Mole and Avogadro's Number, 95

Molar Mass, 97

Mass-Mole-Atom Conversions, 99

Chemical Compounds, 100

3.5 Mass-Mole-Number Conversions, 104

3.6 Determining Chemical Formulas, 107

Mass Percent Composition, 107

Analysis by Decomposition, 112

Combustion Analysis, 113

3.7 Aqueous Solutions, 117

Molarity, 117

Ionic Solutions, 118

Dilutions, 121

Precipitation Analysis, 124

Chapter Summary, 127

4 CHEMICAL REACTIONS AND STOICHIOMETRY, 136

Introduction: Synthesis in Chemistry, 137

Synthesis of Prostaglandins, 138

"Fixed" Nitrogen, 138

4.1 Writing Chemical Equations, 139

Balanced Equations, 139

Balancing Equations, 141

- 4.2 The Stoichiometry of Chemical Reactions, 144**
- 4.3 Yields of Chemical Reactions, 148**
- 4.4 The Limiting Reagent, 152**
 - Tables of Amounts, 154
- 4.5 Precipitation Reactions, 158**
 - Species in Solution, 158
 - Net Ionic Reactions, 159
 - Solubility Guidelines, 160
 - Precipitation Stoichiometry, 161
 - Synthesis Via Precipitation, 163
- 4.6 Acid-Base Reactions, 164**
 - Proton Transfer, 165
 - Weak Acids, 167
 - Acid Nomenclature, 168
 - Bases, 168
 - Acid-Base Stoichiometry, 169
 - Titration, 170
 - Titration of Bases, 173
- 4.7 Reduction-Oxidation Reactions, 173**
 - Metal Displacement, 175
 - Oxidation by Oxygen, 177
- Chapter Summary, 178**
- 5 THE BEHAVIOR OF GASES, 188**
 - 5.1 Molecules in Motion, 189**
 - Velocity and Energy, 191
 - Average Kinetic Energy, 192
 - Rates of Diffusion, 194
 - 5.2 The Ideal Gas Equation, 196**
 - The Ideal Gas, 196
 - 5.3 Pressure, 199**
 - Atmospheric Pressure, 199
 - Units of Pressure, 200
 - Pressure and the Ideal Gas Equation, 200
 - 5.4 Applying the Ideal Gas Equation, 202**
 - Pressure-Volume Variations, 202
 - Temperature-Volume Variations, 205
 - Variations on the Gas Equation, 206
 - Determination of Molar Mass, 208
 - 5.5 Gas Mixtures, 212**
 - Dalton's Law of Partial Pressures, 212
 - Describing Gas Mixtures, 213
 - 5.6 Gas Stoichiometry, 215**
 - Summary of Mole Conversions, 218
 - 5.7 The Earth's Atmosphere, 220**
 - Composition of the Lower Atmosphere, 220
 - Vapor Pressure, 220
 - Chemistry in the Troposphere, 223
 - Oxides of Nitrogen, 224
 - Oxides of Sulfur, 225
 - 5.8 Vacuum and Its Uses, 226**
 - Chapter Summary, 229**
- 6 ATOMS AND LIGHT, 236**
 - 6.1 Characteristics of Atoms, 237**
 - 6.2 Characteristics of Light, 239**
 - The Photoelectric Effect, 241
 - Light Behaves like Particles, 244
 - Light and Atoms, 244
 - 6.3 Absorption and Emission Spectra, 246**
 - Quantization of Energy, 248
 - Energy Level Diagrams, 249
 - The Electromagnetic Spectrum, 254
 - 6.4 Sunlight and the Earth, 255**
 - Atmospheric Temperature Variations, 255
 - The Ozone Layer, 256
 - 6.5 Properties of Electrons, 260**
 - Properties Shared by all Electrons, 260
 - Heisenberg's Uncertainty Principle, 264
 - Properties of Bound Electrons, 265
 - 6.6 The Schrödinger Equation, 266**
 - Properties of the Schrödinger Equation, 267
 - Chapter Summary, 268**
- 7 ATOMIC STRUCTURE AND PERIODICITY, 272**
 - 7.1 Quantum Numbers, 273**
 - Energy Quantum Number, 274
 - Azimuthal Quantum Number, 274
 - Magnetic Quantum Number, 275
 - Spin Quantum Number, 276
 - 7.2 Shapes of Atomic Orbitals, 278**
 - Orbital Depictions, 279
 - Orbital Size, 279
 - Details of Orbital Shapes, 280
 - 7.3 Orbital Energies, 282**
 - The Effect of Nuclear Charge, 282
 - Effect of Other Electrons, 283
 - Screening, 284
 - 7.4 Electron Configurations, 287**
 - Pauli Exclusion Principle, 288
 - Aufbau Principle, 288
 - Electron-Electron Repulsion, 291
 - Order of Orbital Stability, 292
 - Near-Degenerate Orbitals, 293
 - Ionic Configurations, 294
 - Excited States, 295
 - Atomic Magnetism, 295
 - 7.5 The Periodic Table, 297**
 - Valence Electrons, 298
 - 7.6 Periodicity of Atomic Properties, 299**
 - Underlying Patterns, 300
 - Atomic Radii, 300
 - Ionization Energy, 302
 - Higher Ionizations, 303
 - Electron Affinity, 303

Irregularities in Orbital Stability, 304
 Isoelectronic Series, 305

7.7 Energetics of Ionic Compounds, 306

Why Not $\text{Na}^{2+}\text{Cl}^{2-}$?, 308
 Cation Stability, 308
 Anion Stability, 309

7.8 Ions and Chemical Periodicity, 309

Metals and Nonmetals, 310
 s-Block Elements, 312

Chapter Summary, 314

8 FUNDAMENTALS OF CHEMICAL BONDING, 320

8.1 Overview of Bonding, 321

The Hydrogen Molecule, 322
 Orbital Overlap, 322
 Bond Length and Bond Energy, 323
 Other Diatomic Molecules: HF and F_2 , 324
 Approaches to Bonding, 324

8.2 Unequal Electron Sharing, 326

Electronegativity, 327

8.3 Lewis Structures, 329

The Conventions, 329
 Writing Lewis Structures, 330
 Formal Charge, 336
 Equivalent Lewis Structures, 340

8.4 Tetrahedral Molecules: Carbon, 345

The Shape of Methane, 345
 Why a Tetrahedron? 345
 Hybridization: sp^3 Orbitals, 347
 Outer Atoms, 347
 Alkanes, 348

8.5 Other Tetrahedral Molecules, 350

Tetrahedral Nitrogen and Oxygen, 350
 Silicon, 352

8.6 Other Hybridizations, 355

The Shape of Boron Trifluoride:
 sp^2 Hybridization, 355
 The Shape of Dimethyl Mercury:
 sp Hybridization, 358
 Participation of d Orbitals:
 Trigonal Bipyramidal Geometry, 358
 Octahedral Geometry, 361

8.7 Confirmation of Molecular Shapes, 362

Bond Angles, 363
 Dipole Moments, 364
 Summary of Geometries and
 Hybridization, 366

Chapter Summary, 367

9 CHEMICAL BONDING: MULTIPLE BONDS, 374

9.1 Multiple Bonds in Carbon Compounds, 375

Bonding in Ethylene, 375
 σ Bonds and π Bonds, 376
 Acetylene: Formation of a Triple Bond, 378

9.2 Bond Lengths and Energies, 381

Bond Length, 381
 To π Bond or Not to π Bond:
 Carbon vs. Silicon, 383
 Bond Energy, 384
 Factors Affecting Bond Energy, 386
 Reaction Energy, 387

9.3 Second-Row Diatomic Molecules, 393

Bonding in N_2 , 393
 Antibonding Orbitals, 393
 Bond Order, 395
 Heteronuclear Diatomic Molecules, 397

9.4 Delocalized π Orbitals, 398

Bonding in 1,3-Butadiene, 398
 Conjugated π Systems, 399
 Ozone, 401
 Carbon Dioxide, 403
 Other Triatomic Molecules, 404
 Procedure to Describe Bonding, 405

9.5 π Bonding in Polyatomic Anions, 407

Nitrate and Carbonate Anions, 408
 Inner Oxygen Atoms, 409
 π Bonding Beyond the Second Row, 410

9.6 Band Theory of Solids, 413

Delocalized Orbitals in Lithium Metal, 413
 Properties of Metals, 414
 Insulators and Conductors:
 Carbon vs. Lead, 415
 Metalloids, 418
 Doped Semiconductors, 419

Chapter Summary, 421

10 EFFECTS OF INTERMOLECULAR FORCES, 428

10.1 The Nature of Intermolecular Forces, 429

The Halogens, 429
 Real Gases, 431
 Dispersion Forces, 435
 Dipolar Forces, 437

10.2 Hydrogen Bonding, 439

Binary Hydrogen Compounds, 439
 Hydrogen Bonding in Biomolecules, 440

10.3 Properties of Liquids, 442

Surface Tension, 442
 Adhesive Forces, 443
 Viscosity, 444

- 10.4 Properties of Solids, 445**
 - Bonding in Solids, 445
 - Crystalline Solids, 446
 - Close-Packed Crystals, 446
 - Unit Cells, 449
 - Molecular Solids, 450
 - Covalent Solids, 451
 - Amorphous Solids, 452
- 10.5 The Nature of Solutions, 454**
 - "Like Dissolves Like," 455
 - Solubility of Solids, 456
 - Solubility of Gases in Liquids, 459
- 10.6 Dual-Nature Molecules: Surfactants and Biological Membranes, 462**
 - Surfactants, 464
 - Cell Membranes, 465
- 10.7 Properties of Aqueous Solutions, 467**
 - Phase Equilibria, 467
 - Effects of Solutes, 468
 - Ionic Solutions, 471
 - Osmosis, 472
 - Determination of Molar Mass, 474
- 10.8 Separation Processes, 475**
 - Recrystallization, 476
 - Distillation, 477
 - Chromatography, 478
 - Methods of Chromatography, 478
- Chapter Summary, 481**
- 11 MACROMOLECULES, 490**
 - 11.1 Polymerization of Alkenes, 491**
 - Synthesis of Polyethylene, 492
 - Other Polyalkenes, 494
 - Rubber, 495
 - 11.2 Functional Groups, 498**
 - Alcohols and Thiols, 499
 - Amines, 499
 - The Carbonyl Group, 500
 - Esters, 500
 - Amides, 501
 - Ethers, 501
 - 11.3 Condensation Polymers, 502**
 - Polyamides, 503
 - Polyesters, 506
 - Formaldehyde Polymers, 506
 - Silicones, 508
 - 11.4 Polymer Properties, 511**
 - Plastics, 512
 - Fibers, 513
 - Elastomers, 513
 - Polymer Stability, 514
 - 11.5 Proteins, 515**
 - Amino Acids, 516
 - Polypeptides, 517
 - Secondary Protein Structure, 520
 - Tertiary Protein Structure, 521
 - Globular Proteins, 523
 - Fibrous Proteins, 525
 - 11.6 Carbohydrates, 527**
 - Monosaccharides, 527
 - Oligosaccharides, 529
 - Polysaccharides, 531
 - 11.7 Nucleic Acids, 534**
 - The Building Blocks, 534
 - The Primary Structure of Nucleic Acids, 536
 - Secondary Structure of DNA: The Double Helix, 536
 - DNA and Chromosomes, 539
 - The Structure of RNA, 539
 - Chapter Summary, 541**
- 12 CHEMICAL ENERGETICS, 550**
 - 12.1 Thermodynamic Definitions, 551**
 - System, 551
 - State and Changes of State, 552
 - Chemical Changes of State, 553
 - State Functions vs. Path Functions, 555
 - 12.2 Energy, 556**
 - Exothermic and Endothermic Reactions, 556
 - Energy and Heat, 558
 - Work and Energy, 559
 - Expansion Work, 559
 - First Law of Thermodynamics, 561
 - State Functions vs. Path Functions, 562
 - Human Energy Requirements, 563
 - 12.3 Heat Measurements: Calorimetry, 565**
 - Calorimeters, 565
 - Types of Calorimeters, 567
 - Energy Changes and Calorimetry, 569
 - Molar Energy Change, 570
 - 12.4 Enthalpy, 571**
 - Heats of Formation, 574
 - Enthalpy Changes for Chemical Reactions, 576
 - 12.5 Enthalpy and Intermolecular Forces, 582**
 - Heat of Solution, 582
 - Phase Changes, 584
 - Energies of Phase Transfer, 587
 - Chapter Summary, 587**
- 13 SPONTANEITY OF CHEMICAL PROCESSES, 596**
 - 13.1 Spontaneity, 597**
 - Energy and Spontaneity, 599
 - Molecular Disorder, 600

- 13.2 Entropy, the Measure of Disorder, 603**
Entropy, 603
Direction of Heat Flow, 608
- 13.3 Entropies of Substances, 609**
Disorder and Temperature, 609
Entropy and Concentration, 613
Standard Reaction Entropies, 615
- 13.4 Spontaneity and Free Energy, 616**
Change in Free Energy Under Nonstandard Conditions, 618
Changing Concentration, 620
Influencing Spontaneity, 622
- 13.5 Some Applications of Thermodynamics, 625**
Nitrogen Fixation, 625
Phase Diagrams, 627
Thermal Pollution, 631
- 13.6 Bioenergetics, 633**
Biochemical Energy Production, 634
Coupled Reactions, 635
Energy Efficiency, 637
- Chapter Summary, 638**
- 14 MECHANISMS OF CHEMICAL REACTIONS, 646**
Introduction: The Ozone Problem, 647
- 14.1 What is a Mechanism? 648**
Example of a Mechanism: Formation of N_2O_4 , 648
Elementary Reactions, 650
Decomposition of NO_2 , 651
Intermediates, 651
The Rate-Determining Step, 653
- 14.2 Rates of Chemical Reactions, 655**
Rates of Chemical Reactions: A Molecular View, 655
A Microscopic View, 657
- 14.3 Concentration and Reaction Rates, 659**
Rate Laws, 661
Rate Laws and Mechanisms, 661
A General Expression for the Rate Law of a Reaction, 663
Rate Constants, 663
- 14.4 Experimental Kinetics, 665**
First-Order Reactions, 665
Second-Order Integrated Rate Law, 669
"Isolation" Experiments, 671
- 14.5 Linking Mechanisms and Rate Laws, 675**
Rate-Determining First Step, 675
Rate-Determining Later Step, 677
Equality of Rates, 679
- 14.6 Reaction Rates and Temperature, 682**
Energy Changes in a Unimolecular Reaction, 683
Energy Changes During Bimolecular Reactions, 683
Activation Energy, 684
Activation Energy and the Rate Constant, 684
The Arrhenius Equation, 686
Values of Activation Energy, 689
- 14.7 Catalysis, 690**
Catalysis and the Ozone Problem, 692
Homogeneous and Heterogeneous Catalysts, 693
Catalysts in Industry, 693
Enzymes, 696
- Chapter Summary, 700**
- 15 PRINCIPLES OF CHEMICAL EQUILIBRIUM, 710**
Introduction: The Formation Reaction of Ammonia, 711
- 15.1 Dynamic Equilibrium, 712**
Equilibrium, 712
Experimental Confirmation, 713
The Equilibrium Constant, 714
Reversibility, 714
- 15.2 Properties of Equilibrium Constants, 717**
Units and the Equilibrium Constant, 718
Direction of an Equilibrium Reaction, 719
Magnitudes of Equilibrium Constants, 720
- 15.3 Types of Equilibria, 721**
Vaporization Equilibria, 721
Gas Solubility, 721
Solubility of Salts, 722
Formation of Complex Ions, 723
Acid-Base Equilibria, 723
Water Equilibrium, 724
Gas Equilibria, 725
- 15.4 Working with Equilibria, 729**
Chemistry of Equilibria, 729
Calculating Equilibrium Constants, 730
Initial Conditions and Concentration Tables, 731
Solving for Unknowns, 733
Equilibrium Position, 735
Working with Small Equilibrium Constants, 736
Working with Large Equilibrium Constants, 737
- 15.5 Thermodynamics and Equilibrium, 739**
The Concentration Quotient, 739
Equilibrium Constants and Temperature, 743

- 15.6 Shifts in Equilibrium, 745**
Le Châtelier's Principle, 745
Changes in Amounts, 746
Effects of Catalysts, 747
Effect of Temperature, 747
Chapter Summary, 749
- 16 AQUEOUS EQUILIBRIA, 758**
Introduction: Aqueous Chemistry of Calcium, 759
16.1 The Composition of Aqueous Solutions, 761
Major Species in Solution, 761
Ionic Solutions, 761
Molecular Solutions, 763
Types of Equilibria, 764
Spectator Ions, 765
16.2 Solubility Equilibria, 766
Precipitation Equilibria, 767
16.3 Proton-Transfer Equilibria, 769
The Range of H_3O^+ Concentration, 770
pH: A Convenient Measure of Acidity, 771
Proton Transfer to Water, 772
Proton Transfer from Water, 773
Conjugate Acid-Base Pairs, 774
16.4 Acids and Bases, 777
Acids, 778
Polyprotic Acids, 778
Bases, 783
Basic and Acidic Salts, 785
16.5 Buffer Solutions, 788
The Nature of Buffer Solutions, 788
The Molecular View of a Buffer Solution, 789
The Buffer Equation, 791
Buffer Capacity, 791
Buffer Preparation, 794
16.6 Acid-Base Titrations, 798
Titration of a Weak Acid by OH^- , 799
Titration of a Weak Base with H_3O^+ Ions, 801
Indicators, 803
Chapter Summary, 806
- 17 ELECTRON TRANSFER REACTIONS: REDOX AND ELECTROCHEMISTRY, 816**
17.1 Recognizing Redox Reactions, 817
Oxidation Numbers, 818
17.2 Balancing Redox Reactions, 821
Half-Reactions, 822
Balancing Half-Reactions, 823
Balancing Redox Equations, 824
17.3 Spontaneity of Redox Reactions, 828
Direct and Indirect Electron Transfer, 829
Completing the Circuit, 831
Galvanic Cells, 832
Electrodes, 832
17.4 Redox Stoichiometry, 835
Moles of Charge, 835
Redox Synthesis, 837
17.5 Cell Potentials, 838
Electrode Equilibrium, 839
Standard Electrical Potential, 841
Standard Cell Voltages, 843
Conventions for Standard Reduction Potentials, 846
17.6 Free Energy and Electrochemistry, 848
Cell Potential and Free Energy, 848
Cell Potentials and Chemical Equilibrium, 849
The Nernst Equation, 851
Concentration Cells, 853
17.7 Redox in Action, 855
Batteries, 856
Corrosion, 858
17.8 Electrolysis, 862
Electrolysis of Water, 863
Competitive Electrolysis, 865
Electroplating, 866
17.9 Metallurgy, 868
Redox in Metallurgy, 868
Separation and Conversion, 868
Reduction, 870
Production of Aluminum, 870
Iron and Steel, 873
Chapter Summary, 875
- 18 THE CHEMISTRY OF LEWIS ACIDS AND BASES, 882**
18.1 Lewis Acids and Bases, 883
Formation of Lewis Acid-Base Adducts, 884
Recognizing Lewis Acids and Bases, 884
18.2 Coordination Complexes, 886
Nature of Metal-Ligand Binding, 887
The Chelate Effect, 888
Structures of Coordination Complexes, 890
Isomers, 891
Naming Coordination Compounds, 893
18.3 Bonding in Coordination Complexes, 896
Crystal Field Theory of Octahedral Complexes, 896
Four-Coordinate Complexes, 896
Populating the d Orbitals, 898

Magnetic Properties of Coordination Complexes, 899
The Spectrochemical Series, 901
Other Contributions to the Crystal Field Splitting Energy, 901
Color in Coordination Complexes, 902

18.4 Hard and Soft Acids and Bases, 906

Polarizability, 907
The Hard-Soft Concept, 907
The Hard-Soft Acid-Base (HSAB) Principle, 909

18.5 The Main Group Elements, 910

Group III Elements, 910
Metathesis Reactions, 913
Group IV Elements, 913
Group V Elements, 915
Group VI Elements, 915
Group VII, The Halogens, 917

Chapter Summary, 918

19 NUCLEAR CHEMISTRY AND RADIOCHEMISTRY, 924

19.1 Nuclear Structure, 925

Nuclear Composition, 925
Stable Nuclides, 927

19.2 Nuclear Energetics, 929

Magnitudes of Nuclear Energies, 929
Binding Energy, 931
Energy Barriers, 932

19.3 Nuclear Decay, 935

Decay Processes, 936
The Role of γ -Emission, 938
Rates of Nuclear Decay, 939

19.4 Induced Nuclear Reactions, 942

Neutron-Capture Reactions, 942
Other Binuclear Reactions, 943
Synthetic Elements, 946

19.5 Nuclear Fission, 947

Characteristics of Fission, 947
Nuclear Weapons, 950
Nuclear Reactors, 951

19.6 Nuclear Fusion, 955

The Threshold for Fusion, 955
Fusion Bombs, 955
Controlled Fusion, 956
Prospects for Nuclear Power, 956

19.7 Stellar Nuclear Reactions, 957

First-Generation Stars, 958
Second-Generation Stars, 959

19.8 Effects of Radiation, 961

Radiation Damage, 961
Effects on Humans, 962
Cumulative Effects, 962
Radiation Shielding, 963

19.9 Applications of Radioactivity, 965

Dating Using Radioactivity, 965
Radioactive Tracers, 968
Medical Imaging, 969
Radiation Therapy, 970

Chapter Summary, 972

A Scientific Notation, A-1

Converting to Scientific Notation, A-1
Working with Powers of 10, A-2

B Quantitative Observations, A-5

Precision and Significant Figures, A-5
Relative and Absolute Precision, A-6
Rules for Determining Precision, A-7
Rounding Off, A-8
Shortcuts to Precision, A-8

C Sample Chapter Summary, A-10

Chapter 1, A-10

D Ionization Energies and Electron Affinities of the First 36 Elements, A-12

E Standard Thermodynamic Functions, A-13

F The Mathematics Describing Change, A-21

Changes in Properties, A-21
Ratios of Changes, A-22
Mathematical Limits, A-23
Integration, A-23
Logarithmic Functions, A-25
Integration of Rate Laws, A-26
