

Table of contents

Abstract 4

1. Introduction 7

- 1.1. General statement 7
- 1.2. Acknowledgments 7
- 1.3. General geology 7
- 1.4. Location, access and topography 8
- 1.5. Structural control of the landscape 8
- 1.6. Previous geological work 8
- 1.7. Field study and sampling program 9
- 1.8. Laboratory procedures 10
 - 1.8.1. Sample preparation 10
 - 1.8.2. Separation of biotite and potassium feldspar 10
 - 1.8.3. Separation of heavy minerals 10
 - 1.8.4. XRF analysis of trace elements 10
 - 1.8.5. Structural state of the K-feldspars 10

2. Geology of the Heemskirk massif 10

3. Internal structure and tectonics of the Heemskirk massif 12

- 3.1. Layering 12
- 3.2. Planar structures of local scale 13
- 3.3. Parallelism of xenoliths and tourmaline nodules 13
- 3.4. Primary fracture systems 13
- 3.5. Faults 14

4. Petrography 14

- 4.1. White granite 15
 - 4.1.1. W1 – contaminated porphyritic granite (Plate 5-2) 15
 - 4.1.2. W3 – coarse-grained granite (Plates 6-2 and 7-2) 15
 - 4.1.3. W2 – medium- to fine-grained tourmaline granite (Plates 8-2, 9-2, 10-2 and 11-2) 16
- 4.2. Red granite 16
 - 4.2.1. R1 – contaminated porphyritic granite (Plate 5-1) 16
 - 4.2.2. R2 – coarse-grained granite (Plate 6-1 and 7-1) 17
 - 4.2.3. R3 – medium- to fine-grained granite (Plates 8-1, 9-1, 10-1 and 11-1) 17
- 4.3. Dykes 17
- 4.4. Postmagmatic products of the Heemskirk granite massif 18
 - 4.4.1. Tourmaline fissures, quartz-tourmaline veins, dykes and greisens within the granite 18
 - 4.4.2. Quartz-tourmaline veins in the country rocks 18
- 4.5. Thermal metamorphism 18
- 4.6. Ghost structure of the country rocks within the Heemskirk granite massif 18

5. Mineralogy 19

- 5.1. Feldspars 19
 - 5.1.1. The composition of plagioclases in the rock types of the Heemskirk granite massif was studied by means of the universal stage (Becke – Becker method). 19
 - 5.1.2. The composition of K-feldspars in the red granite 20
 - 5.1.3. Triclinicity of potassium feldspars 20
- 5.2. Biotite 21
 - 5.2.1. Biotite colour 21
 - 5.2.2. Refractive indices 21
- 5.3. Tourmaline 21
- 5.4. Distribution of accessories in the Heemskirk granites 22
- 5.5. Mineralogy of quartz-tourmaline veins and greisens 22

6. Chemistry of rocks and minerals 23

- 6.1. Chemical composition and distribution of trace elements in rocks 23

6.2. Bulk rock composition and trace elements of biotites	28
6.3. Distribution of sodium and trace elements in K-feldspars	35
7. Statistical models of analytical data from rocks and minerals	36
7.1. Trend surface analysis	36
7.1.1. Principles of the method	36
7.1.2. Some problems and limitations of the method	38
7.1.3. Regional trends of elements and their positive deviations in the rocks	39
7.1.4. Regional trends of elements and their positive deviations in biotite	46
7.1.5. Regional trends of elements and their positive deviations in the potassium feldspars of the red granite	52
7.1.6. Summary of the trend surface analysis for investigation of the internal structure of the Heemskirk granite massif	55
7.2. Multivariate discriminant analysis	59
7.3. R-mode factor analysis	67
7.3.1. Interpretation of factors in the rocks	70
7.3.2. Description of factors in the biotites	71
7.3.3. Description and interpretation of factors in potassium feldspar	72
8. Use of the geochemical data for locating hidden (blind) tin mineralization in the Heemskirk massif	73
8.1. Topography of the white granite surface	73
8.2. Discussion	74
8.3. Summary	75
9. Petrogenesis	75
9.1. Relationship between the white and red granite	75
9.2. Origin of the tourmaline nodules	76
9.3. The sequence of crystallization of mineral components	76
9.4. Estimation of physical conditions during emplacement and crystallization of the Heemskirk massif	77
9.4.1. P_{H_2O} and the depth of intrusion	77
9.4.2. Temperature during intrusion and magmatic crystallization	77
10. Genesis of the Heemskirk intrusion	78
11. The age of the Heemskirk massif and its relationship to the granites of western Tasmania	78
12. The problem of metallogenesis and relationship of the Heemskirk granite massif to the Zeehan Pb–Zn mineral field	78
12.1. Relationship between the Heemskirk granite massif and tin mineralization	79
12.2. Relationship between the Heemskirk granite and the Zeehan mineral field	80
12.3. Summary	81
13. Conclusions	81
13.1. Internal structure and tectonics	82
13.2. Petrogenesis	82
13.3. Metallogeny	82
