Foreword	vii
George M. Church	
Introduction	ix
Acknowledgments	xi

Part I

1. A gentle introduction to genomics	3
1.1 Introduction	3
1.2 What is a genome?	3
1.3 How does a genome work?	8
1.4 Gene regulation: when and where a gene is expressed	11
1.5 The human epigenome	13
1.6 Replication and reproduction	14
1.7 Genetic variation	16
2. Practical and ethical considerations in personal genomics	24
2.1 Considerations when obtaining personal genomic information	24
2.2 Limitations of personal genomics	25
2.3 Risks of personal genomics	30
2.4 Summary	33
3. Getting started with personal genomics	34
3.1 Obtaining personal genomic information	34
3.2 From DNA to "raw" data	36
3.3 Working with personal genomic data	47
3.4 Conclusion	50
4. Visualizing personal genomics	52
4.1 Introduction	52
4.2 Tabular views	53
4.3 Ideograms	57

4.4	Genome browsers	61
4.5	Visual quantitative assessment	67
4.6	Integrative visualizations	71
4.7	Conclusion	74
5.	Ancestry and genealogy	76
5.1	The genetics of human ancestry	76
5.2	Global genetic similarity	78
5.3	Genetic similarity between individuals	86
5.4	Identity by descent	89
5.5	Familial lineages	92
5.6	Genetic anthropology and ancient human DNA	95
5.7	Conclusions	98
6.	Genetic trait associations	100
6.1	Introduction	100
6.2	Discovery of genetic trait associations	100
6.3	Genetic disease associations	111
6.4	Application and interpretation of genetic associations	117
6.5	Quantitative trait inference	135
6.6	Summary	137
7.	Pharmacogenomics	139
7.1	What is pharmacogenomics?	139
7.2	Mapping common pharmacogenomic variants	142
7.3	Major applications of pharmacogenomics	146
7.4	Assessment of rare variants in PD/PK genes	149
7.5	Variation in pharmacogenomic pathways	155
7.6	Conclusion	158

Part II

8.	Personal genomics and the environment	163
8.1	Introduction	163
8.2	Nutritional genomics	164
8.3	Environmental toxins	167
8.4	Metagenomics and infectious disease	174
8.5	Identifying personal genetic risk modifiers	174
8.6	Summary	178
9.	From DNA to physiology	181
9.1	Introduction	181
9.2	Bridging DNA and physiology through gene regulation	182
9.3	Creating personal genomic eQTL profiles	184

9.4 Personal genomic eQTL enrichment analysis	187
9.5 Functional assessment of personal genomic regulatory variants	193
9.6 Linking to further aspects of physiology	195
9.7 Summary	197
10. Rare and novel variants	199
10.1 General challenges	200
10.2 Compound heterozygosity	202
10.3 Evolutionary conservation	204
10.4 Rare variants in coding regions	208
10.5 Rare variants in non-coding regions	211
10.6 Practical application of rare variant assessment tools	213
10.7 Further challenges	218
11. Structural variation	221
11.1 Copy number variation	223
11.2 More complex events (insertions, inversions, translocations)	225
11.3 Challenges	228
Conclusion	232
Glossary	233
Index	241
