

Introduction	9
--------------	---

Temperate environment of deciduous forests

13

1. Kaleidoscopic colors	15
1.1 Abundant rain, variable temperature [N. Dudley, J.M. Camarasa and T.J. Peck]	17
1.1.1 A biome without excesses [N. Dudley, T.J. Peck and J.M. Camarasa]	17
Graduation of differences.	17
Stability and variability.	17
The middle levels of biodiversity	18
1.1.2 The four seasons [N. Dudley and J.M. Camarasa]	19
Main climatic features	21
Latitudinal and continental variants	22
Alterations in normal processes	23
1.1.3 The human influence. [N. Dudley and J.M. Camarasa]	24
The ax and the fence	24
The generous forest and the sinister forest	26
The present and the future	27
1.2 Rich, brown, and gray soils [J.M Gadullo and R.M. Poch]	29
1.2.1 The edaphic factors and processes	29
Humification and acidolysis	29
The illuviation of clay materials	31
Decarbonatation	31
Gleyzation.	31
Podzolization	32
Erosion and other processes in slopes	33
Periglacialism	33
The formation of <i>plaggen</i>	33
1.2.2 Soil types in the deciduous forests.	34
Soils with illuviation of clays	34
Mountain soils over calcareous materials	35
Transition soils in steppes and prairies.	36
Transition soils with coniferous forests.	36
Transition soils with Mediterranean areas and temperate subtropical forests.	37
1.3 Deciduous forests in the world [T.J. Peck, J.M. Camarasa, N. Dudley and C. Ibero]	39
1.3.1 Deciduous forest locations [T.J. Peck and N. Dudley]	39
The latitudinal disposition of deciduous forests	39
The historic kinship of deciduous forests	40

1.3.2 The global situation of deciduous forests	[T.J. Peck, J.M. Camarasa and C. Ibero]	40
The European area		40
The Euxinic, Caucasian, and Hyrcanian areas		42
The East Asian region		43
The North American area		46
The South American area		48
2. Life in deciduous forests		49
2.1 The ecological functioning of deciduous forests	[C. Ibero and G.F. Peterken]	51
2.2.1 The metabolism of deciduous forests	[C. Ibero]	51
The nutrient cycle		51
The water cycle		52
The economics of production		53
Diversity of consumers		55
Soil fauna and decomposers		58
2.1.2 The rhythm of the seasons	[C. Ibero]	61
The precarious spring		61
• The palette of nature	[M. Boada, C. Ibero and R. Folch]	62
The bountiful summer		68
The spectacular autumn		70
The silent winter		72
2.1.3 Disturbances and the succession process	[G.F. Peterken]	73
Disturbance agents		73
The restoring succession		75
Succession and structure		77
Variability linked to the substrate and relief		79
2.2 Flora and vegetation	[C. Ibero, T.J. Peck, J.M. Camarasa and G.F. Peterken]	81
2.2.1 Predominance of the tree layer	[C. Ibero, T.J. Peck and J.M. Camarasa]	81
Diversity of tree species		81
Fagaceae: beeches, oaks, and chestnuts		83
Betulaceae: birches, alders, hazels, and hornbeams		85
Platanaceae and Cercidiphyllaceae: plane and <i>katsura</i> trees		86
Magnoliaceae: deciduous magnolias and tulip trees		87
Salicaceae, Ulmaceae, and Tiliaceae: willows, elms, and linden trees		89
Juglandaceae and Hippocastanaceae: walnuts and horse chestnuts		90
Aceraceae: maples and sugar maples		92
Rosaceae: service trees and stone-fruit trees		93
Oleaceae: ashes		95
2.2.2 The clear diversity of the underbrush	[C. Ibero and J.M. Camarasa]	95
The changing appearance of shrubs and herbaceous plants		95
Rosaceae and Araliaceae: brambles and devil's walking sticks		97
Cornaceae and Caprifoliaceae: dogwoods, elders, and honeysuckle		98
Shrubby Aceraceae, Aquifoliaceae, and Celastraceae: shrubby maples, holly, and spindle trees		100
Glossulariaceae and Ericaceae: currants, cranberries, and rhododendrons		101
Hamamelidaceae and other families: witch hazels and other small trees		101
2.2.3 Forest communities	[C. Ibero, T.J. Peck, J.M. Camarasa and G.F. Peterken]	102
Types of deciduous forests		102
Typical mesophytic deciduous forests: beech and ash forests		102
• Makura no Soshi	[T. Nishimura]	104
Submesophytic deciduous forests: oak forests		112
Complex mesophytic deciduous forests		118
Deciduous forests mixed with conifers		120
Atypical deciduous forests		122
2.2.4 Shrubby and herbaceous formations	[J.M. Camarasa]	123
Atlantic heaths		124
Genista and fern acidophile thickets		125
Hay meadows		126
Humid grazing meadows		126

2.3 Fauna and the animal population	[C. Ibero]	127
2.3.1 The place of each		127
The hosts of soil and leaf litter		127
Wood feeders		128
The unrepentant devourers of minuscule members of the fauna		129
The voracious minute insectivores		130
The large herbivores		131
The winged walkers		131
• Crowned heads	[C. Ibero and A. Minelli]	132
Small carnivores		136
The large predators		137
The kings of the trees		139
• Danaë and Asclepius	[A. Masó]	142
2.3.2 The daily rhythms		146
The morning foraging of wood		146
The crepuscular world		147
Perpetuation through numbers		148
2.3.3 The tasks and the days		148
Winter vacations		149
Winged migrants		151
• Surviving in the drawing	[R. Folch and J. Maluquer]	152
2.4. Life in rivers and lakes	[R. Margalef, N. Dudley, J.M. Camarasa, C. Ibero and T.J. Peck]	156
2.4.1 Continental waters in the deciduous forest domain	[R. Margalef and N. Dudley]	156
Large and important rivers		156
Lakes and ponds		159
The interaction between deciduous forests and limnetic systems		162
2.4.2 The aquatic fauna	[N. Dudley]	163
Freshwater protoctists and invertebrates		163
Aquatic or amphibian vertebrates		166
2.4.3 Aquatic and shore vegetation	[N. Dudley, J.M. Camarasa, C. Ibero and T.J. Peck]	169
Hydrophytes or helophytes		169
Deciduous forests of the shore		170
3. Humans in deciduous forests		173
3.1 Human population of deciduous forests	[C. Junyent, S. Stolton and J.M. Camarasa]	175
3.1.1 The origin and diversity of the human population	[C. Junyent and S. Stolton]	175
The population of the European deciduous forests		175
Human occupation of deciduous forests in Asia and North America		178
3.1.2 The populations of European deciduous forests	[C. Junyent and S. Stolton]	178
The Celtic people		178
The Germanic peoples		179
• Dolmens, cromlechs, and menhirs	[X. Campillo]	180
The Slavic peoples		184
The Baltic peoples		185
The Romany people		185
The non-Indo-European groups: Finno-Ugric and Turks		185
3.1.3 The peoples of Asian deciduous forests	[C. Junyent and S. Stolton]	187
The northern Chinese		187
Manchus and other Tungus		188
The Koreans		190
The Japanese		190
3.1.4. The inhabitants of the American deciduous forest		192
The Algonquian groups		192
The Iroquois people		193
The Sioux, Caddo, and Penutian groups		195

• The <i>Mayflower</i>	[A. Marcer and R. Folch]	196
The post-Columbian allochthonous population		200
3.1.5 Health and diseases in deciduous forests	[C. Junyent and J.M. Camarasa]	201
Cystic fibrosis		201
Infectious diseases: plague, smallpox, measles, tuberculosis		202
Diseases of rich countries: Alzheimer's disease, cancer, cardiovascular diseases, and nervous disturbances		207
3.2 Exploitation of plant resources	[S. Stolton, N. Dudley and J.M. Camarasa]	211
3.2.1 Harvesting without planting	[S. Stolton and N. Dudley]	211
Nutritional use of deciduous forests plants		211
Salads and forest vegetables		213
Deciduous forest fruits		214
• Grandmother's pantry	[S. Stolton and R. Folch]	216
Mushrooms		220
Plants for beverages and tisanes		223
Plants to season and sweeten		224
Medicinal plants		225
Cosmetic, aromatic, and dyeing plants		227
Sacred, symbolic, and magic plants		228
3.2.2 Utilization of forest resources	[S. Stolton and N. Dudley]	231
Diverse uses of trees in deciduous forests		231
• Tapestries	[R. Folch]	232
Wicker, roots, and barks		236
Wood for cabinetmaking and decoration		237
Wood for building		239
Wood for shipbuilding		240
Wood as fuel		241
Wood for paper pulp		242
3.2.3 Agricultural activity	[J.M. Camarasa, S. Stolton and N. Dudley]	243
The distribution of agricultural space in the deciduous forest domain		243
Cultivation of grains and legumes: cereals and soybeans		245
• Grain alcohol	[R. Folch]	246
Vegetable production		255
Sweet fruit trees: pears, apples, and plums		256
• Underground sweetness	[R. Folch]	258
Dry fruit trees: almonds, walnuts, and pecans		262
A completely integrated exotic: the potato		263
The cultivation of ornamental plants		264
3.2.4 Utilization of pastures	[S. Stolton and N. Dudley]	265
Traditional pastoral uses		265
Present grazing lands		266
3.3 Utilization of animal resources	[N. Dudley and J.M. Camarasa]	267
3.3.1 Hunting	[N. Dudley]	267
Hunting in deciduous forests in antiquity		267
Bird hunting		269
Fur and skin trading		270
Hunting as a sport		270
3.3.2 Fishing in fresh water	[N. Dudley]	272
• The art of fox hunting	[N. Dudley]	274
Tradition and fishing		278
River fishing as a sport		278
Freshwater fisheries		278
River aquaculture		280
3.3.3 Cattle-raising activities and stockbreeding	[N. Dudley and J.M. Camarasa]	281
Cattle		281
Sheep		283
• Long-lasting milk	[C. Ibero and R. Folch]	284
Pig farming		290
Aviculture		292
Pets		295

3.4 Conflicts in management and environmental problems	[T.J. Peck, J.M. Camarasa, S. Stolton, N. Dudley, R. Margalef, D.A. Gilmour, C. Junyent and S. Frade]	297
3.4.1 The weight of history	[S. Stolton, J.M. Camarasa and T.J. Peck]	297
The traces of the impact of hunters and gatherers of the Paleolithic		297
The Neolithic agriculturists against the Old World deciduous forests		299
Deforestation in the ancient empires		300
The expansion of the agricultural base in temperate deciduous forests		302
The deciduous forests of the New World before and after European colonization		304
The emergence of pre-industrial urbanization		305
On the threshold of the Industrial Revolution in England		307
The expansion of the Industrial Revolution in Europe, the United States, and Japan		308
3.4.2 Forest and land use management	[T.J. Peck, S. Stolton, D.A. Gilmour and S. Frade]	309
The evolution of the concept of forest use		309
Patterns of forest use and management		311
Forestry practices		314
Methods of cutting and extraction		316
Repopulation and plantations		316
The ecological consequences of forest intervention		319
New approaches to forest management		321
The future of the temperate deciduous forests		322
Grazing lands and meadows		324
3.4.3 Management of faunal reserves	[N. Dudley]	325
Changing attitudes towards the fauna		325
• <i>Sato yama</i>	[H. Moriyama]	326
Subsistence hunting and recreational hunting		330
Reduction and extinction		333
Inadequate introductions		333
The problems of fishing		335
3.4.4 The management of continental waters	[R. Margalef]	335
The distortion of the hydrographic network		336
The pollution of rivers and lakes		337
3.4.5 Demographic explosion and the urban phenomenon	[J.M. Camarasa, C. Junyent, T.J. Peck, D.A. Gilmour and S. Stolton]	338
Demographic growth		339
Urban systems in middle and Atlantic Europe		340
Large metropolitan areas and populous East Asian rural areas		341
The young and booming North American metropolises		343
3.4.6 The socioecological conflict	[J.M. Camarasa, S. Stolton, T.J. Peck and D.A. Gilmour]	343
• The "Big Apple"	[A. Marcer and R. Folch]	344
Economic and technological conditions		348
The evolution of the food and agriculture system		348
The evolution of the industrial system		353
Energy dilemmas		359
Changes in the atmosphere		362
• The "Greens"	[X. Campillo]	366
The changing climate		370
4. Protected areas and biosphere reserves in deciduous forests		373
4.1 The deciduous forests of the world under protected status	[M. Carey]	375
4.1.1 General considerations		375
The importance of the protection of deciduous forests		375
Protection on an international scale		375
4.1.2 Parks and protected areas		376
4.2 The biosphere reserves of UNESCO in the domain of temperate deciduous forests	[M. Carey]	378
4.2.1 Biosphere reserves in temperate deciduous forests		378
4.2.2 Biosphere reserves in North American temperate deciduous forests		378
The biosphere reserves of the Southern Appalachians		379

4.2.3 Biosphere reserves in European deciduous forests	389
The Bialowieza Biosphere Reserve	389
The Cill Áirne (Killarney) Biosphere Reserve	399
4.2.4 Biosphere reserves in Asian deciduous forests	406
The biosphere reserve of Mount Sorak	406
Bibliography	411
Indexes	417
Species' index	419
Thematic index	431
