PART I

The Science of Virology 1

1 Foundations 2

Luria's Credo 3

Viruses Defined 3

Why We Study Viruses 3

Viruses Are Everywhere 3

Viruses Infect All Living Things 4

Viruses Can Cause Human Disease 5

Viruses Can Be Beneficial 5

Viruses "R" Us 6

Viruses Can Cross Species Boundaries 6

Viruses Are Unique Tools To Study Biology 6

Virus Prehistory 7

Viral Infections in Antiquity 7

The First Vaccines 8

Microorganisms as Pathogenic Agents 9

Discovery of Viruses 11

The Defining Properties of Viruses 13

The Structural Simplicity of Virus Particles 13

The Intracellular Parasitism of Viruses 13

Cataloging Animal Viruses 18

The Classical System 18

Classification by Genome Type: the Baltimore System 19

A Common Strategy for Viral Propagation 21

Perspectives	21
References	24
Study Questions	24

2 The Infectious Cycle 26

Introduction	27
---------------------	-----------

The Infectious Cycle 27

The Cell	27
Entering Cells	28
Viral RNA Synthesis	29
Viral Protein Synthesis	29
Viral Genome Replication	29
Assembly of Progeny Virus Particles	29

Viral Pathogenesis 29

Overcoming Host Defenses 30

Cultivation of Viruses 30

Cell Culture	30
Embryonated Eggs	35
Laboratory Animals	35

Assay of Viruses 35

Measurement of Infectious Units	35
Efficiency of Plating	38
Measurement of Virus Particles	40

Viral Reproduction: The Burst Concept 49

The One-Step Growth Cycle 49

One-Step Growth Analysis: a Valuable Tool for Studying Animal Viruses	52
--	----

Global Analysis 53

DNA Microarrays	54
Mass Spectrometry	56
Protein-Protein Interactions	56

Single-Cell Virology 56

Perspectives 58

References 59

Study Questions 60

PART II

Molecular Biology 61

3 Genomes and Genetics 62

Introduction 63

Genome Principles and the Baltimore System 63

Structure and Complexity of Viral Genomes 63

DNA Genomes 64

RNA Genomes 65

What Do Viral Genomes Look Like? 68

Coding Strategies 69

What Can Viral Sequences Tell Us? 69

The “Big and Small” of Viral Genomes: Does Size Matter? 71

The Origin of Viral Genomes 73

Genetic Analysis of Viruses 74

Classical Genetic Methods 75

Engineering Mutations into Viral Genomes 77

Engineering Viral Genomes: Viral Vectors 83

Perspectives 87

References 87

Study Questions 88

4 Structure 90

Introduction 91

Functions of the Virion 91

Nomenclature 92

Methods for Studying Virus Structure 92

Building a Protective Coat 95

Helical Structures 96

Capsids with Icosahedral Symmetry 99

Other Capsid Architectures 111

Packaging the Nucleic Acid Genome 112

Direct Contact of the Genome with a Protein Shell 112

Packaging by Specialized Viral Proteins 113

Packaging by Cellular Proteins 113

Viruses with Envelopes 115

Viral Envelope Components 115

Simple Enveloped Viruses: Direct Contact of External Proteins
with the Capsid or Nucleocapsid 117

Enveloped Viruses with an Additional Protein Layer 118

Large Viruses with Multiple Structure Elements 119

Particles with Helical or Icosahedral Parts 120

Alternative Architectures 123

Other Components of Virions 125

Enzymes 125

Other Viral Proteins 125

Cellular Macromolecules 126

Mechanical Properties of Virus Particles 126

Investigation of Mechanical Properties of Virus Particles 126

Stabilization and Destabilization of Virus Particles 128

Perspectives	128
References	129
Study Questions	130

5 Attachment and Entry 132

Introduction 133

Attachment of Virus Particles to Cells 133

General Principles	133
Identification of Receptors for Virus Particles	135
Virus-Receptor Interactions	137

Entry into Cells 142

Virus-induced Signaling via Cell Receptors	142
Routes of Entry	143
Membrane Fusion	145

Intracellular Trafficking and Uncoating 154

Movement of Viral and Subviral Particles within Cells	154
Uncoating of Enveloped Virus Particles	155
Uncoating of Nonenveloped Viruses	155

Import of Viral Genomes into the Nucleus 159

The Nuclear Pore Complex	159
Nuclear Localization Signals	159
Nuclear Import of RNA Genomes	161
Nuclear Import of DNA Genomes	162
Import of Retroviral Genomes	162

Perspectives 164

References 165

Study Questions 166

6 Synthesis of RNA from RNA Templates 168

Introduction 169

The Nature of the RNA Template 169

Secondary Structures in Viral RNA	169
Naked or Nucleocapsid RNA	170

The RNA Synthesis Machinery 171

Identification of RNA-Dependent RNA Polymerases	171
Three-Dimensional Structures of RNA-Dependent RNA Polymerases	173

Mechanisms of RNA Synthesis 176

Initiation	176
Capping	179
Elongation	179
Functions of Additional Polymerase Domains	181
RNA Polymerase Oligomerization	181
Template Specificity	182

Unwinding the RNA Template 182

Role of Cellular Proteins 183

Paradigms for Viral RNA Synthesis 183

(+) Strand RNA 184

Synthesis of Nested Subgenomic mRNAs 184

(-) Strand RNA 185

Ambisense RNA 189

Double-Stranded RNA 189

Unique Mechanisms of mRNA and Genome Synthesis
of Hepatitis Delta Virus 190

Do Ribosomes and RNA Polymerases Collide? 192

Origins of Diversity in RNA Virus Genomes 193

Misincorporation of Nucleotides 193

Segment Reassortment and RNA Recombination 193

RNA Editing 194

Perspectives 195

References 196

Study Questions 197

7 Synthesis of RNA from DNA Templates 198

Introduction 199

Properties of Cellular RNA Polymerases That Transcribe Viral DNA 199

Some Viral Genomes Must Be Converted to Templates Suitable
for Transcription 200

Transcription by RNA Polymerase II 201

Regulation of RNA Polymerase II Transcription 203

Common Properties of Proteins That Regulate Transcription 206

Transcription of Viral DNA Templates by the Cellular Machinery Alone 208

Viral Proteins That Govern Transcription of DNA Templates 209

Patterns of Regulation 209

The Human Immunodeficiency Virus Type 1 Tat Protein Autoregulates
Transcription 211

The Transcriptional Cascades of DNA Viruses 217

Entry into One of Two Alternative Transcriptional Programs 226

Transcription of Viral Genes by RNA Polymerase III 230

The VA-RNA I Promoter 231

Inhibition of the Cellular Transcriptional Machinery 232

Unusual Functions of Cellular Transcription Components in Virus-Infected Cells 233

Viral DNA-Dependent RNA Polymerases 233

Perspectives 234

References 235

Study Questions 236

8

Processing 238**Introduction 239****Covalent Modification during Viral Pre-mRNA Processing 240**

Capping the 5' Ends of Viral mRNA 240

Synthesis of 3' Poly(A) Segments of Viral mRNA 243

Internal Methylation of Adenosine Residues 245

Splicing of Viral Pre-mRNA 246

Regulated Processing of Viral Pre-mRNA 249

Editing of Viral mRNAs 255

Export of RNAs from the Nucleus 257

The Cellular Export Machinery 257

Export of Viral mRNA 258

Posttranscriptional Regulation of Viral or Cellular Gene Expression by Viral Proteins 262

Temporal Control of Viral Gene Expression 262

Viral Proteins Can Inhibit Cellular mRNA Production 264

Regulation of Turnover of Viral and Cellular mRNAs in the Cytoplasm 266

Intrinsic Turnover 266

Regulation of mRNA Stability by Viral Proteins 267

mRNA Stabilization Can Facilitate Transformation 267

Nonsense-Mediated mRNA Decay 267

Noncoding RNAs 271

Small Interfering RNAs and Micro-RNAs 271

Long Noncoding RNAs 276

Circular RNAs 278

Perspectives 278**References 279****Study Questions 281**

9

Replication of DNA Genomes 282**Introduction 283****DNA Synthesis by the Cellular Replication Machinery 284**

Eukaryotic Replicons 284

Cellular Replication Proteins 287

Mechanisms of Viral DNA Synthesis 287

Lessons from Simian Virus 40 288

Replication of Other Viral DNA Genomes 290

Properties of Viral Replication Origins 294

Recognition of Viral Replication Origins 296

Viral DNA Synthesis Machines 301

Resolution and Processing of Viral Replication Products 301

Exponential Accumulation of Viral Genomes 302

Viral Proteins Can Induce Synthesis of Cellular Replication Proteins 303

- Synthesis of Viral Replication Machines and Accessory Enzymes 304
- Viral DNA Replication Independent of Cellular Proteins 304
- Delayed Synthesis of Structural Proteins Prevents Premature Packaging of DNA Templates 305
- Inhibition of Cellular DNA Synthesis 305
- Synthesis of Viral DNA in Specialized Intracellular Compartments 305

Limited Replication of Viral DNA Genomes 308

- Integrated Parvoviral DNA Can Be Replicated as Part of the Cellular Genome 308
- Different Viral Origins Regulate Replication of Epstein-Barr Virus 310
- Limited and Amplifying Replication from a Single Origin: the Papillomaviruses 313

Origins of Genetic Diversity in DNA Viruses 315

- Fidelity of Replication by Viral DNA Polymerases 315
- Modulation of the DNA Damage Response 316
- Recombination of Viral Genomes 318

Perspectives 321

References 321

Study Questions 323

10 Reverse Transcription and Integration 324

Retroviral Reverse Transcription 325

- Discovery 325
- Impact 325
- The Process of Reverse Transcription 326
- General Properties and Structure of Retroviral Reverse Transcriptases 334
- Other Examples of Reverse Transcription 337

Retroviral DNA Integration 340

- The Pathway of Integration: Integrase-Catalyzed Steps 341
- Integrase Structure and Mechanism 347

Hepadnaviral Reverse Transcription 350

- A DNA Virus with Reverse Transcriptase 350
- The Process of Hepadnaviral Reverse Transcription 352

Perspectives 358

References 359

Study Questions 360

11 Protein Synthesis 362

Introduction 363

Mechanisms of Eukaryotic Protein Synthesis 363

- General Structure of Eukaryotic mRNA 363
- The Translation Machinery 364

Initiation	365
Elongation and Termination	375
The Diversity of Viral Translation Strategies	378
Polyprotein Synthesis	378
Leaky Scanning	378
Reinitiation	381
StopGo Translation	382
Suppression of Termination	382
Ribosomal Frameshifting	383
Bicistronic mRNAs	384
Regulation of Translation during Viral Infection	385
Inhibition of Translation Initiation after Viral Infection	385
Regulation of eIF4F	389
Regulation of Poly(A)-Binding Protein Activity	392
Regulation of eIF3	392
Interfering with RNA	392
Stress-Associated RNA Granules	393
Perspectives	395
References	396
Study Questions	397

12 Intracellular Trafficking 398

Introduction	399
Assembly within the Nucleus	400
Import of Viral Proteins for Assembly	401
Assembly at the Plasma Membrane	403
Transport of Viral Membrane Proteins to the Plasma Membrane	404
Sorting of Viral Proteins in Polarized Cells	419
Disruption of the Secretory Pathway in Virus-Infected Cells	421
Signal Sequence-Independent Transport of Viral Proteins to the Plasma Membrane	422
Interactions with Internal Cellular Membranes	426
Localization of Viral Proteins to Compartments of the Secretory Pathway	426
Localization of Viral Proteins to the Nuclear Membrane	426
Transport of Viral Genomes to Assembly Sites	427
Transport of Genomic and Pregenomic RNA from the Nucleus to the Cytoplasm	427
Transport of Genomes from the Cytoplasm to the Plasma Membrane	429
Perspectives	430
References	431
Study Questions	432

13 Assembly, Release, and Maturation 434

Introduction 435

Methods of Studying Virus Assembly and Egress 435

Structural Studies of Virus Particles 436

Visualization of Assembly and Exit by Microscopy 436

Biochemical and Genetic Analyses of Assembly Intermediates 436

Methods Based on Recombinant DNA Technology 439

Assembly of Protein Shells 439

Formation of Structural Units 439

Capsid and Nucleocapsid Assembly 441

Self-Assembly and Assisted Assembly Reactions 445

Selective Packaging of the Viral Genome and Other Components of Virus Particles 447

Concerted or Sequential Assembly 447

Recognition and Packaging of the Nucleic Acid Genome 448

Incorporation of Enzymes and Other Nonstructural Proteins 458

Acquisition of an Envelope 459

Sequential Assembly of Internal Components and Budding from a Cellular Membrane 459

Coordination of the Assembly of Internal Structures with Acquisition of the Envelope 460

Release of Virus Particles 460

Assembly and Budding at the Plasma Membrane 461

Assembly at Internal Membranes: the Problem of Exocytosis 464

Release of Nonenveloped Virus Particles 470

Maturation of Progeny Virus Particles 470

Proteolytic Processing of Structural Proteins 470

Other Maturation Reactions 474

Cell-to-Cell Spread 475

Perspectives 479

References 479

Study Questions 481

14 The Infected Cell 482

Introduction 483

Signal Transduction 483

Signaling Pathways 483

Signaling in Virus-Infected Cells 485

Gene Expression 489

Inhibition of Cellular Gene Expression 489

Differential Regulation of Cellular Gene Expression 492

Metabolism 496

Methods To Study Metabolism 496

Glucose Metabolism	497
The Citric Acid Cycle	501
Electron Transport and Oxidative Phosphorylation	502
Lipid Metabolism	504

Remodeling of Cellular Organelles 507

The Nucleus	509
The Cytoplasm	511

Perspectives 516

About the Authors xxiii

Key of Repetitive Elements xxv

1 Infections of Populations: History and Epidemiology **2**

Introduction to Viral Pathogenesis 3

A Brief History of Viral Pathogenesis 4

The Relationships among Microbes and the Diseases They Cause 4

The First Human Viruses Identified and the Role of Serendipity 5

New Methods Facilitate the Study of Viruses as Causes of Disease 7

Viral Epidemics in History 8

Epidemics Shaped History: the 1793 Yellow Fever Epidemic in Philadelphia 9

Tracking Epidemics by Sequencing: West Nile Virus Spread to the Western Hemisphere 10

Zoonotic Infections and Epidemics Caused by “New” Viruses 11

The Economic Toll of Viral Epidemics in Livestock 12

Population Density and World Travel Are Accelerators of Viral Transmission 12

Focus on Frontline Health Care: Ebolavirus in Africa 12

Emergence of a Birth Defect Associated with Infection: Zika Virus in Brazil 13

Epidemiology 14

Fundamental Concepts 14

Methods Used by Epidemiologists 17

Surveillance 17

Network Theory and Practical Applications 20

Parameters That Govern the Ability of a Virus to Infect a Population 20

Geography and Population Density 20

Climate 23

Perspectives 26

References 27

Study Questions 28

2 Barriers to Infection 30

Introduction 31

An Overview of Infection and Immunity 31

A Game of Chess Played by Masters 31

Initiating an Infection 33

Successful Infections Must Modulate or Bypass Host Defenses 34

Skin 34

Respiratory Tract 35

Alimentary Tract 38

Eyes 41

Urogenital Tract 42

Placenta 42

Viral Tropism 43

Accessibility of Viral Receptors 44

Other Host-Virus Interactions That Regulate the Infectious Cycle 44

Spread throughout the Host 45

Hematogenous Spread 47

Neural Spread 50

Organ Invasion 51

Entry into Organs with Sinusoids 51

Entry into Organs That Lack Sinusoids 51

Organs with Dense Basement Membranes 53

Skin 53

Shedding of Virus Particles 54

Respiratory Secretions 54

Saliva 55

Feces 55

Blood 56

Urine 56

Semen 56

Milk 56

Skin Lesions 56

Tears 56

Perspectives 57

References 58

Study Questions 59

3 The Early Host Response: Cell Autonomous and Innate Immunity 60

Introduction 61

The First Critical Moments: How Do Individual Cells Detect a Virus Infection? 62

Cell Signaling Induced by Viral Entry Receptor Engagement 63

Receptor-Mediated Recognition of Microbe-Associated Molecular Patterns 64

Cell-Intrinsic Defenses 70

Apoptosis (Programmed Cell Death) 70

Programmed Necrosis (Necroptosis) 75

Autophagy 77

Epigenetic Silencing 77

Host Proteins That Restrict Virus Reproduction (Restriction Factors) 79

RNA Interference 83

CRISPR 83

The Continuum between Intrinsic and Innate Immunity 83

Secreted Mediators of the Innate Immune Response 83

Overview of Cytokine Functions 85

Interferons, Cytokines of Early Warning and Action 86

Chemokines 94

The Innate Immune Response 96

Monocytes, Macrophages, and Dendritic Cells 97

Complement 97

Natural Killer Cells 99

Other Innate Immune Cells Relevant to Viral Infections 101

Perspectives 103

References 104

Study Questions 106

4 Adaptive Immunity and Establishment of Memory 108

Introduction 109

Attributes of the Host Response 109

Speed 109

Diversity and Specificity 110

Memory 110

Self-Control 111

Lymphocyte Development, Diversity, and Activation 111

The Hematopoietic Stem Cell Lineage 111

The Two Arms of Adaptive Immunity 112

The Major Effectors of the Adaptive Response: B and T Cells 112

Diverse Receptors Impart Antigen Specificity to B and T Cells 118

Events at the Site of Infection Set the Stage for the Adaptive Response 120

Acquisition of Viral Proteins by Professional Antigen-Presenting Cells Enables Production of Proinflammatory Cytokines and Establishment of Inflammation 120

Activated Antigen-Presenting Cells Leave the Site of Infection and Migrate to Lymph Nodes 122

Antigen Processing and Presentation 125

Professional Antigen-Presenting Cells Induce Activation via Costimulation 125

Presentation of Antigens by Class I and Class II MHC Proteins 125

Lymphocyte Activation Triggers Massive Cell Proliferation 128

The CTL (Cell-Mediated) Response 130

CTLs Lyse Virus-Infected Cells 130

Control of CTL Proliferation 132

Control of Infection by CTLs without Killing 134

Rashes and Poxes 134

The Humoral (Antibody) Response 136

Antibodies Are Made by Plasma Cells 136

Types and Functions of Antibodies 137

Virus Neutralization by Antibodies 137

Antibody-Dependent Cell-Mediated Cytotoxicity: Specific Killing by Nonspecific Cells 140

Immunological Memory 140

Perspectives 142

References 143

Study Question Puzzle 145

5 Patterns and Pathogenesis 146

Introduction 147

Animal Models of Human Diseases 147

Patterns of Infection 151

Incubation Periods 151

Mathematics of Growth Correlate with Patterns of Infection 152

Acute Infections 152

Persistent Infections 155

Latent Infections 163

Abortive Infections 170

Transforming Infections 171

Viral Virulence 171

Measuring Viral Virulence 171

Approaches To Identify Viral Genes That Contribute to Virulence 171

Viral Virulence Genes 173

Pathogenesis 176

- Infected Cell Lysis 176
- Immunopathology 177
- Immunosuppression Induced by Viral Infection 181
- Oncogenesis 183
- Molecular Mimicry 183

Perspectives 183

References 185

Study Question Puzzle 186

6 Cellular Transformation and Oncogenesis 188

Introduction 189

- Properties of Transformed Cells 189
- Control of Cell Proliferation 193

Oncogenic Viruses 197

- Discovery of Oncogenic Viruses 197
- Viral Genetic Information in Transformed Cells 200
- The Origin and Nature of Viral Transforming Genes 205
- Functions of Viral Transforming Proteins 206

Activation of Cellular Signal Transduction Pathways by Viral Transforming Proteins 206

- Viral Signaling Molecules Acquired from the Cell 207
- Alteration of the Production or Activity of Cellular Signal Transduction Proteins 209

Disruption of Cell Cycle Control Pathways by Viral Transforming Proteins 215

- Abrogation of Restriction Point Control Exerted by the RB Protein 215
- Production of Virus-Specific Cyclins 218
- Inactivation of Cyclin-Dependent Kinase Inhibitors 218

Transformed Cells Increase in Size and Survive 218

- Mechanisms That Permit Survival of Transformed Cells 219

Tumorigenesis Requires Additional Changes in the Properties of Transformed Cells 221

- Inhibition of Immune Defenses 222

Other Mechanisms of Transformation and Oncogenesis by Human Tumor Viruses 222

- Nontransducing Oncogenic Retroviruses: Tumorigenesis with Very Long Latency 222
- Oncogenesis by Hepatitis Viruses 223

Perspectives 225

References 226

Study Questions 228

7

Vaccines 230**Introduction 231****The Origins of Vaccination 231**

Smallpox: a Historical Perspective 231

Worldwide Vaccination Programs Can Be Dramatically Effective 232

Vaccine Basics 237

Immunization Can Be Active or Passive 237

Active Vaccination Strategies Stimulate Immune Memory 238

The Fundamental Challenge 243

The Science and Art of Making Vaccines 243

Inactivated Virus Vaccines 244

Attenuated Virus Vaccines 247

Subunit Vaccines 250

Virus-Like Particles 252

Nucleic Acid Vaccines 253

Vaccine Technology: Delivery and Improving Antigenicity 254

Adjuvants Stimulate an Immune Response 254

Delivery and Formulation 254

Immunotherapy 255

The Ongoing Quest for an AIDS Vaccine 255**Perspectives 256****References 257****Study Question Puzzle 259**
