

Table of Contents

Chapter 1 Introduction	1
Why you'll enjoy scientific writing	2
What makes it different	3
Rules, conventions, and why we have them	5
How these skills will help your future career	6
Conclusion	6
Part 1 Understanding Different Types Of Scientific Writing	7
Chapter 2 The Lab / Fieldwork Report	9
Audience, purpose, and the standard report format	9
Introductions	12
Materials and methods	13
Results	14
Chronology, consistency, and flow	14
Level of detail	16
Tone	16
Discussion	17
References	20
Appendices	20
Chapter 3 The Essay	21
Interpreting the question	22
Command words	22
Introductions	23
The main body	25
Concluding	26
Worked example: planning an essay	28
Revising your plan as you go	32
Chapter 4 The Dissertation	34
The document itself	35
Introduction	36
Materials and methods	36
Chapters	37

General discussion	38
Appendices	39
References	39
Chapter 5 The Poster	40
The format and layout	41
Attracting your audience	41
Images and figures	41
Chapter 6 The Abstract	42
The purpose	42
The content	43
Common errors	44
Part 2 Preparing to Write	45
Chapter 7 Researching the Topic and Evaluating Your Materials	47
Books	48
Journal articles	49
Searching via library websites	52
Searching via academic databases	52
Keeping track of all your sources	54
Evaluating and refining your materials	54
Categorizing your reading list	57
Selecting material generated from your own scientific research	58
Chapter 8 Incorporating and Referencing Other People's Work	60
Why incorporate the work of others at all?	60
Commonly used referencing terms and their meanings	62
Incorporating other people's work into your writing	64
Phrases to use when incorporating someone else's work	70
Major referencing styles in science	71
Citations – the parts within your text	72
References – the list at the end	73
Conclusion	77
Chapter 9 Working with Data	78
Why data presentation is important	78
Graphs	79
Images and illustrations	79
Tables	79
Principles of data presentation	79

Different types of data, and how to present them	88
Establishing good habits with your data	95
Conclusion	97
Chapter 10 Being Critical	98
Being critical: what, why, when, and how?	98
Worked example: smoking and cardiorespiratory disease	103
Critiquing a whole research paper	105
Valid criticisms you can make	106
Worked example: testing the effectiveness of different stretching methods	108
Writing critically	109
Dealing with conflicting information	110
Hierarchies of evidence	110
Conclusion	114
Part 3 Getting Down to Writing	115
Chapter 11 Producing a Draft and Building Your Argument	117
Getting ready to write	117
Drafting	118
Process and product drafts	119
Developing your own writing practice: when, where, and for how long?	120
Refining your structure and clarifying your argument	125
Structural techniques	134
Structure within paragraphs	135
Worked example: building an argument	137
Conclusion	144
Chapter 12 Sounding Like a Scientist	145
Specificity in word choice	146
Objectivity and the passive voice	149
Conclusion	152
Chapter 13 How to Say Exactly What You Mean	153
Punctuation	154
Most common mistakes in student writing	160
Sentence types	162
In practice	165
Conclusion	167
Chapter 14 Editing and Proofreading Your Work	168
What is editing?	168
What is proofreading?	174
Conclusion	176

Chapter 15 Making the Most of Feedback	177
Why is feedback important?	177
Peer review	180
Conclusion	182
Chapter 16 Conclusion	183
Quiz answers	184
Bibliography	186
Index	188
