

CONTENTS

List of figures	xi
List of tables	xv
Foreword	xvii
Preface	xxi
Acknowledgment	xxv

PART I	
Introduction	1
1 Transformational learning with educational robotics	3
1. Introduction	3
2. STEM and technology-enhanced learning environments	4
3. Educational robotics	8
4. Exhibiting the role of robots in supporting student learning	20
5. Conclusion	24
6. Key takeaways	25
2 Applications of robots in educational settings	33
1. Introduction	33
2. Constructionism and educational robotics	34
3. Educational robotics: Roles and settings	40
4. Examples of applications of robots as a learning tool in teaching and learning	44

5.	<i>Conclusion</i>	49	
6.	<i>Key takeaways</i>	50	
3	Teaching STEM with robotics: Synopsis of a research-guided program		55
1.	<i>Introduction</i>	55	
2.	<i>Need for authentic STEM learning experiences</i>	56	
3.	<i>Rationale for robotics in STEM education</i>	57	
4.	<i>Overview, theoretical background, and project design</i>	58	
5.	<i>Illustrative examples from implementation</i>	66	
6.	<i>Project outcomes and recommendations</i>	70	
7.	<i>Conclusion</i>	72	
8.	<i>Key takeaways</i>	72	

PART II

Theory, design, and implementation 79

4	Design-based research for robotics-enhanced learning environments		81
1.	<i>Introduction</i>	81	
2.	<i>Design-based research</i>	82	
3.	<i>Literature review exemplifying the use of design-based research in robotics-enabled learning</i>	88	
4.	<i>Design-based research implementation examples from robotics-enhanced learning environments</i>	89	
5.	<i>Implementation challenges of design-based research</i>	107	
6.	<i>Conclusion</i>	110	
7.	<i>Key takeaways</i>	111	
5	Effective professional development for robotics-focused learning environments		115
1.	<i>Introduction</i>	115	
2.	<i>Teacher professional development</i>	116	
3.	<i>Designing for effective professional development</i>	119	
4.	<i>Literature review on teacher professional development for robotics-based learning</i>	122	
5.	<i>Designing a robotics-based professional development program using situated learning</i>	123	
6.	<i>Creating a professional development program using the social capital theory</i>	129	

7.	<i>Challenges in planning effective professional development programs and incorporating their lessons</i>	134
8.	<i>Conclusion</i>	136
9.	<i>Key takeaways</i>	137
6	Applying TPACK to design for robotics-enhanced learning	141
1.	<i>Introduction</i>	141
2.	<i>Technological, pedagogical, and content knowledge</i>	142
3.	<i>Literature review on teachers' TPACK development</i>	148
4.	<i>Development of teacher TPACK through professional development aimed at using robotics as a learning tool</i>	150
5.	<i>Development of TPACK-guided robotics-based STEM learning units</i>	155
6.	<i>Conclusion</i>	165
7.	<i>Key takeaways</i>	166

PART III

Instructional perspectives and lesson designs 169

7	Prerequisites, practices, and perceptions to design effective robotics-based lessons	171
1.	<i>Introduction</i>	171
2.	<i>Enabling effective integration of robotics in classrooms</i>	172
3.	<i>Prerequisites for robotics-based STEM lessons</i>	174
4.	<i>Instructional practices for effective robotics-based lessons</i>	177
5.	<i>Factors that influence student perceptions of utilizing robots as educational tools</i>	184
6.	<i>Conclusion</i>	187
7.	<i>Key takeaways</i>	188
8	Applying cognitive domain of Bloom's taxonomy to robotics-based learning	192
1.	<i>Introduction</i>	192
2.	<i>Bloom's taxonomy</i>	193
3.	<i>Literature review on applications of Bloom's taxonomy in robotics</i>	198
4.	<i>Integrating cognitive domain of Bloom's taxonomy with educational robotics to promote higher-order thinking</i>	199
5.	<i>Conclusion</i>	207
6.	<i>Key takeaways</i>	207

9	Using the 5E instructional model to develop robotics-based science units	211
1.	Introduction	211
2.	The 5E instructional model	212
3.	Literature review on integrating the 5E model in robotics-based learning	216
4.	Exemplar robotics-based science unit plans aligned with the 5E model and Next Generation Science Standards	218
5.	Implementing the 5E instructional model	227
6.	Conclusion	230
7.	Key takeaways	230
	 <i>Appendix A Related information from ‘Teaching STEM with Robotics’ project</i>	 234
1.	A summary timeline for the ‘Teaching STEM with Robotics’ project	235
2.	A comparison of design-based research with other research methodologies	236
3.	Sample items from the TPACK self-efficacy and TPACK awareness surveys	237
4.	Instructional practices for successful robotics lessons	238
5.	A lesson planning template using Bloom’s taxonomy	240
6.	Characteristics of the 5E instructional model	241
7.	A 5E lesson planning template	244
8.	A learning unit on genetic mutations	245
9.	A lesson plan on speed, distance, and time	248
	 <i>Appendix B Online repository of robotics-based lessons</i>	 253
1.	LEGO robotics-based lessons	253
2.	NGSS-plus-5E robotics lessons	253
3.	Additional robotics-based STEM lessons	253
	 <i>Index</i>	 258
