Section 1 Common clinical approaches

1	Concepts of rehabilitation	3
2	Epidemiology	21
3	Rehabilitation team	37
4	Organization of services	47
5	History and examination	63
6	Rehabilitation assessment and evaluation	77
7	Cognition and behaviour	89
8	Communication	105
9	Swallowing	113
10	Spasticity and contractures	123
11	Chronic pain	141
12	Neurogenic bladder and bowel	167
13	Sexual function	181
14	Skin problems	195
15	Injections in rehabilitation medicine	203
16	Cardiac rehabilitation	213
17	Respiratory issues in rehabilitation	233
18	Mobility and gait	251
19	Family and relationships	269
20	Vocational rehabilitation	279
21	Orthotics	289
22	Wheelchairs and seating	305

23	Technical aids and assistive technology	31
24	Personal factors in rehabilitation	33
25	Rehabilitation in critical illness	34

Section 2 Condition-specific approaches

26	Traumatic brain injury	36
27	Spinal cord injury	38
28	Stroke	40
29	Multiple sclerosis	41
30	Cerebral palsy	43
31	Neurodegenerative conditions	45
32	Prolonged disorders of consciousness	47
33	Disorders of the peripheral nerves	48
34	Muscle disorders	50
35	Common musculoskeletal conditions	51
36	Musculoskeletal problems of upper and lower limbs	53
37	Spinal problems	55
38	Cancer rehabilitation	57
39	Geriatric rehabilitation	58
40	Burns rehabilitation	60
41	Amputee rehabilitation	61
