

7.3.2	Clinical imaging	165
7.3.3	Segmentation	166
7.4	Visualization techniques	167
7.4.1	Surface visualization	167
7.4.2	Volume visualization	168
7.4.3	Illustrative visualization	169
7.4.4	Viewpoint selection	170
7.4.5	Animation in anatomy education	171
7.4.6	Modeling and visualization for functional anatomy	174
7.5	Knowledge representation and labeling	174
7.5.1	Knowledge representation	174
7.5.2	Labeling anatomical models	175
7.5.3	External label placement	176
7.5.4	Internal label placement	178
7.5.5	Labeling interactive illustrations	178
7.5.6	Other annotations	179
7.6	Interaction techniques	179
7.6.1	Basic interaction techniques	179
7.6.2	Advanced interaction techniques	180
7.7	Virtual anatomy systems	182
7.8	3D web-based anatomy education	186
7.8.1	Open web-based standards	187
7.8.2	Selected examples	188
7.9	Evaluation of virtual anatomy systems	191
7.9.1	Evaluation strategies	192
7.9.2	Selected examples	193
7.9.3	Discussion	195
7.10	Concluding remarks	195
CHAPTER 8	Visual computing for radiation treatment planning	199
8.1	Introduction	199
8.2	Background on cancer	200
8.3	Radiation therapy (RT)	201
8.3.1	Basic RT workflow	203
8.3.2	Data involved in the RT workflow	205
8.3.3	Users involved in RT	209
8.4	Definition of target volumes and organs at risk	210
8.4.1	Data registration	210
8.4.2	Data fusion	211
8.4.3	Data segmentation	212
8.5	Treatment plan design and dose calculation	213
8.6	Dose plan review and treatment evaluation	213
8.7	Image-guided adaptive RT	220
8.8	Concluding remarks	220

PART 3 Visual analytics in healthcare

CHAPTER 9	An introduction to visual analytics	225
9.1	Introduction	225
9.2	The data–users–tasks design triangle	228
9.3	Information visualization	230
9.3.1	Visualizing distributions	230
9.3.2	Scatterplot-based representations	230
9.3.3	Mosaic plots for visualizing categorical data	234
9.3.4	Parallel coordinates	235
9.3.5	Glyph-based visualization	239
9.3.6	Visualizations of relational data	240
9.3.7	Geospatial visualizations	242
9.3.8	Visualization of time-varying data	243
9.3.9	Multiple coordinated views	246
9.4	Statistical methods employed in visual analytics	247
9.5	Dimension reduction	248
9.5.1	Linear dimension reduction	249
9.5.2	Non-linear dimension reduction	250
9.6	Clustering	253
9.7	Subspace clustering	256
9.8	Association rule mining	258
9.8.1	Searching for association rules	260
9.8.2	Visualization of association rules	261
9.9	Correlation-based visual analytics	264
9.9.1	Types of correlations	265
9.9.2	Rank-by-feature framework	267
9.9.3	Correlation and causality	268
9.10	Interaction	268
9.11	Challenges in visual analytics for clinical applications	270
9.12	Concluding remarks	272
CHAPTER 10	Visual analytics in public health	273
10.1	Introduction	273
10.2	Public health	275
10.2.1	Epidemiology	276
10.2.2	Study types	277
10.2.3	Task analysis and requirements	278
10.3	Data for public health	283
10.3.1	Population-based cohort study data	284
10.3.2	Clinical data	287
10.3.3	Other data for public health	287
10.3.4	Data preparation and data management	288

10.4	Commonly used visual analytics techniques	288
10.4.1	Dashboards and multiple coordinated views	288
10.4.2	Interactive subpopulation definition	291
10.4.3	Analytical methods for subpopulation definition	292
10.4.4	Spatial epidemiology	293
10.4.4.1	Data	295
10.4.4.2	Small area epidemiology	295
10.4.4.3	Visualization techniques	295
10.4.4.4	Uncertainty quantification and visualization	299
10.4.5	Temporal visualizations	300
10.5	Analysis and control of epidemics	302
10.5.1	Interactive visualization	303
10.5.2	Simulation of spreading	304
10.5.3	Predictive analytics for the simulation of outbreaks	305
10.5.4	Modeling COVID-19	306
10.5.5	Training of outbreak response	307
10.5.6	Zoonotic diseases	309
10.6	Visual analytics for epidemiological research	309
10.6.1	Pharmacoepidemiology	309
10.6.2	Surveillance of air quality	311
10.6.3	Cancer epidemiology	314
10.6.4	Investigation of frequent chronic diseases	315
10.7	Visual analytics of population-based cohort study data	316
10.7.1	Visual analytics and radiomics	316
10.7.2	Identification of strong correlations with disorders	318
10.7.3	Data quality	319
10.8	Evaluation	320
10.9	Concluding remarks	322
ER 11	Visual analytics in clinical medicine	325
11.1	Introduction	325
11.2	Data in clinical medicine	326
11.3	Visual analytics of event-type data	327
11.3.1	Filtering and simplifying event-type data	329
11.4	Visualization of single patient data	332
11.5	Visualization of patient cohort data	334
11.6	Visual analytics for prediction	336
11.7	Clinical decision support	340
11.8	Selected applications	344
11.8.1	Digital pathology	345
11.8.2	Gait analysis	346
11.8.3	Sleep monitoring	347
11.9	Concluding remarks	349

PART 4 Virtual Reality in medicine

CHAPTER 12	Introduction to Virtual Reality	355
12.1	Introduction	355
12.2	Immersion and presence	359
12.3	VR sickness	363
12.4	VR hardware	364
12.4.1	Stereo rendering	364
12.4.2	Principles of VR headsets	365
12.4.3	VR headsets	366
12.4.4	Hardware for semi-immersive VR	372
12.5	Avatar design	373
12.5.1	Virtual body illusion	374
12.5.2	Uncanny valley effect	375
12.5.3	Customization	376
12.5.4	Evaluation	378
12.6	Basic interaction techniques	378
12.6.1	The role of metaphors	379
12.6.2	Selection of objects	379
12.6.3	Manipulation	382
12.6.4	System control	382
12.6.5	Programming VR	384
12.7	Locomotion techniques	385
12.7.1	Teleportation	387
12.7.2	Further artificial techniques	388
12.7.3	Natural locomotion techniques	390
12.7.4	Hardware for locomotion techniques	391
12.7.5	Evaluation of locomotion techniques	392
12.8	Haptics	393
12.8.1	Ground-referenced devices	394
12.8.2	Body-referenced devices	395
12.9	Audio feedback	396
12.10	Applications	397
12.11	Concluding remarks	399
CHAPTER 13	Virtual Reality for medical education	403
13.1	Introduction	403
13.2	Collaborative Virtual Reality	404
13.3	VR for anatomy education	406
13.3.1	VR-based 3D puzzles	407
13.3.2	Collaborative anatomy education	408
13.3.3	Hand anatomy	409
13.3.4	Liver anatomy	412
13.3.5	Heart anatomy	414
13.3.6	Creating a comprehensive VR learning environment	414

	13.3.7 Evaluation	416
	13.3.8 Summary	418
13.4	VR for surgery training	418
	13.4.1 Cognitive phase	421
	13.4.2 Core components and tasks of VR-based surgical training	422
	13.4.3 Modeling the operating room	428
	13.4.4 Training for minimally-invasive surgery	430
	13.4.5 Training in robotic surgery	435
	13.4.6 Neurosurgery training	436
	13.4.7 Training in maxillofacial surgery	437
	13.4.8 Surgical team training	439
	13.4.9 Integrated surgical training	441
	13.4.10 Discussion	442
13.5	Concluding remarks	444
CHAPTER 14	Virtual Reality in treatment and rehabilitation ...	449
14.1	Introduction	449
14.2	Potential of gamification	451
14.3	VR-based pain management	453
	14.3.1 Acute pain	453
	14.3.2 Chronic pain	456
	14.3.3 Evaluation	458
14.4	VR exposure therapy for treatment of anxieties	459
	14.4.1 Acrophobia	460
	14.4.2 Fear of speaking publicly	461
	14.4.3 Evaluation	463
14.5	VR for rehabilitation	464
	14.5.1 VR for cognitive rehabilitation	465
	14.5.2 Evaluation	469
	14.5.3 VR for motor rehabilitation	471
14.6	Concluding remarks	474
	References	477
