viii

1	Introduction	1
	1.1 Multiple-choice questions	2
	1.2 Assessment criteria	4
	1.3 Chapters	7
	1.4 Acknowledgements	8
2	An assessment vignette	9
	2.1 The student's perspective	9
	2.2 Assessing answers to simple questions	14
	2.3 Further integrals	16
	2.4 Discussion	18
3	Learning and assessing mathematics	19
	3.1 The nature of mathematics	19
	3.2 Terms used in assessment	21
	3.3 Purposes of assessment	22
	3.4 Learning	23
	3.5 Principles and tensions of assessment design	25
	3.6 Learning cycles and feedback	33
	3.7 Conclusion	35
4	Mathematical question spaces	37
	4.1 Why randomly generate questions?	38
	4.2 Randomly generating an individual question	39
	4.3 Linking mathematical questions	42
	4.4 Building up conceptions	44
	4.5 Types of mathematics question	46
	4.6 Embedding CAA into general teaching	49
	4.7 Conclusion	51
5	Notation and syntax	53
	5.1 An episode in the history of mathematical notation	54
	5.2 The importance of notational conventions	56
	5.3 Ambiguities and inconsistencies in notation	60
	5.4 Notation and machines: syntax	61
	5.5 Other issues	65
	5.6 The use of the AiM system by students	66

5.7	Proof and arguments	67
5.8	Equation editors	68
5.9	Dynamic interactions	70
5.10	Conclusion	71
6	Computer algebra systems for CAA	73
6.1	The prototype test: equivalence	75
6.2	A comparison of mainstream CAS	76
6.3	The representation of expressions by CAS	78
6.4	Existence of mathematical objects	82
6.5	'Simplify' is an ambiguous instruction	86
6.6	Equality, equivalence, and sameness	88
6.7	Forms of elementary mathematical expression	91
6.8	Equations, inequalities, and systems of equations	94
6.9	Other mathematical properties we might seek to establish	96
6.10	Buggy rules	97
6.11	Generating outcomes useful for CAA	99
6.12	Side conditions and logic	100
6.13	Conclusion	101
7	The STACK CAA system.	102
7.1	Background: the AiM CAA system	102
7.2	Design goals for STACK	103
7.3	STACK questions	106
7.4	The design of STACK's multi-part tasks	107
7.5	Interaction elements	111
7.6	Assessment	112
7.7	Quality control and exchange of questions	113
7.8	Extensions and development of the STACK system by Aalto	114
7.9	Usage by Aalto	117
7.10	Student focus group	121
7.11	Conclusion	125
8	Software case studies	127
8.1	Some early history	127
8.2	CALM	129
8.3	Pass-IT	132
8.4	OpenMark	138
8.5	DIAGNOSYS	140
8.6	Cognitive tutors	146
8.7	Khan Academy	147
8.8	Mathwise	148
8.9	WeBWorK	150
8.10	MathXpert	154
8.11	Algebra tutors: Aplusix and T-algebra	157
8.12	Conclusion	160

9 The future	162
9.1 Encoding a complete mathematical argument	162
9.2 Assessment of proof	166
9.3 Semi-automatic marking	169
9.4 Standards and interoperability	170
9.5 Conclusion	172
 Bibliography	 173
Index	183
