Contributors	xv
Preface	xvii
Acknowledgment	xix
1. Continuing our excellence in soil microbiology, ecology, and biochemistry and using it to achieve a sustainable future	1
<i>Eldor A. Paul</i>	
1.1. The scope and challenges	1
1.2. A brief history of our field	3
1.2.1. The biota	4
1.2.2. Soil ecology	5
1.2.3. Soil biochemistry	6
1.3. Putting it all together	8
References	11
2. The habitat of the soil biota	13
<i>R. Paul Voroney, Richard J. Heck, and Yakov Kuzyakov</i>	
2.1. Introduction	13
2.2. Soil formation	14
2.2.1. Mineral soil profile	16
2.2.2. Organic soil profile	17
2.3. Nature of soil components	18
2.3.1. Mineral particles and inorganic precipitates	18
2.3.2. Organic matter	19
2.3.3. Soil colloids	20
2.3.4. Aggregates in mineral soils	21
2.4. Pore space	22
2.4.1. Microscale of soil solids and pore space	24
2.5. Soil hotspots	25
2.6. Soil water	29
2.7. Soil aeration	32
2.8. Soil solution chemistry	32
2.8.1. Soil pH	33
2.8.2. Soil redox	34
2.9. Soil temperature	34

2.10. Environmental factors, temperature, and moisture interactions	37
References	38
Supporting online material	39
3. Soil bacteria and archaea	41
<i>Sreejata Bandopadhyay and Ashley Shade</i>	
3.1. General introduction to bacteria and archaea	42
3.1.1. Overview	42
3.1.2. Historical and recent advances in understanding the tree of life	42
3.2. Metabolism and physiology	44
3.2.1. Bacterial and archaeal cell characteristics	44
3.2.2. Cell morphology and its plasticity	46
3.2.3. Fundamentals of archaeal and bacterial metabolism	48
3.2.4. Growth kinetics and substrate availability	50
3.3. Microbial adaptations to the terrestrial environment	53
3.3.1. Water availability	53
3.3.2. Dynamic soil chemical gradients	53
3.3.3. Microniches: soil aggregates and microhabitats	54
3.4. Major lineages of bacteria and archaea in soil	55
3.4.1. Overview	55
3.4.2. Archaea	56
3.4.3. Bacteria	60
3.5. Phylogeny and function in the bacteria and archaea	65
3.5.1. Microbial functions and phylogenetic signal	65
3.5.2. Functional redundancy and resilience	66
3.6. Summary	68
3.7. Further reading and resources	69
References	69
4. Fungi in soil: a rich community with diverse functions	75
<i>D. Lee Taylor and Jennifer M. Bhatnagar</i>	
4.1. Introduction	76
4.2. Diversity and evolutionary relationships of the true fungi	76
4.2.1. The origin of fungi	76
4.2.2. Major lineages in soil	79
4.2.3. Extremophiles and novel lineages	82
4.2.4. Fungal structure and growth	83
4.3. Diversity and biogeography	84
4.3.1. Estimates of species richness	86
4.3.2. Fungal dispersal and biogeography	87
4.4. Fungal communities	87
4.4.1. Abiotic drivers	88
4.4.2. Biotic drivers	90
4.5. Fungal traits	92
4.5.1. Structural traits	92
4.5.2. Elemental stoichiometry	93
4.5.3. Genes and enzymes	94

4.6. Ecosystem functions	94
4.6.1. Carbon and nutrient cycling	95
4.6.2. Bioremediation	100
4.7. Soil fungi and global change	100
4.7.1. Climate change effects on soil fungi	101
4.7.2. Other global change effects on soil fungi	105
4.7.3. Effects of multiple interacting global changes	106
Acknowledgments	107
References	107
Supplemental material	121
S4.1. A primer on fungal systematics	121
S4.2. Fungal life cycles	124
S4.3. Glossary of terms	125
Supplemental references	129
 5. Soil fauna: occurrence, biodiversity, and roles in ecosystem function	 131
<i>D.C. Coleman, S. Geisen, and D.H. Wall</i>	
5.1. Introduction	131
5.2. Overview of faunal biodiversity in soils	132
5.3. Protists: microbes among "fauna"	134
5.3.1. Methods to study soil protists	135
5.3.2. Ecology of protists	135
5.3.3. Ecological relevance of protists	136
5.4. Microfauna	137
5.4.1. Rotifera	137
5.4.2. Nematoda	138
5.5. Mesofauna	141
5.5.1. Microarthropods	141
5.5.2. Enchytraeids	142
5.6. Macrofauna	144
5.6.1. Macroarthropods	144
5.6.2. Oligochaeta (earthworms)	146
5.6.3. Formicidae (ants)	149
5.6.4. Isoptera (termites)	149
5.7. Roles of soil fauna in ecosystems and societal impacts	150
5.8. Summary	151
References	152
 6. Molecular and associated approaches for studying soil biota and their functioning	 161
<i>Ulas Karaoz, Joanne B. Emerson, and Eoin L. Brodie</i>	
6.1. Introduction	162
6.2. Omics in the context of soil biota	162
6.3. Direct extraction, relic DNA, and cell separation for omic analyses	164
6.4. The use of biomarkers and metabarcoding for diversity studies	165
6.4.1. Compositional nature of high-throughput biomarker data	166

6.4.2.	Effect of gene copy number variation	166
6.4.3.	Approaches for absolute quantification	167
6.4.4.	New approaches to link microbial diversity to sequencing data products	168
6.5.	Meta-omics of soil biota: read-centric data analysis approaches	169
6.5.1.	Quality control of sequencing reads	169
6.5.2.	Taxonomic classification with reads	171
6.5.3.	Metagenome assembly	172
6.6.	Meta-omics of soil biota: from potential to function	174
6.7.	The new era of genome-resolved metagenomics	175
6.7.1.	Genome binning	175
6.7.2.	Metagenome-assembled genome quality assessment	176
6.7.3.	MAG refinement, dereplication, and curation	177
6.7.4.	Viral recovery	177
6.8.	Big data challenges in molecular analyses of soil biota	178
6.8.1.	Experimental planning	178
6.8.2.	Computational resources	178
6.9.	Isotope-enabled molecular analyses of soil biota	179
6.10.	From nanometer-scale cells to global-scale questions	180
6.10.1.	The importance of scale	180
6.10.2.	FAIRification of multi-omics data	182
6.10.3.	Answering global scale questions through meta-analyses of soil microbiomes	183
6.10.4.	The need for a theoretical framework to guide measurements and integrate new knowledge	183
Acknowledgements		184
References		184
7.	Physiological and biochemical methods for studying soil biota and their functions	193
<i>Ellen Kandeler</i>		
7.1.	Introduction	193
7.2.	Scale of investigations and collection of samples	195
7.3.	Storage and pretreatment of samples	196
7.4.	Microbial biomass	197
7.4.1.	Fumigation incubation and fumigation extraction methods	198
7.4.2.	Substrate-induced respiration (SIR)	198
7.5.	Compound-specific analyses of microbial biomass and microbial community composition	199
7.5.1.	ATP and heat output as a measure of active microbial biomass	199
7.5.2.	Microbial membrane components and fatty acids	200
7.5.3.	Phospholipid etherlipids	201
7.5.4.	Respiratory quinones	203
7.5.5.	Ergosterol as a measure of fungal biomass	203
7.5.6.	Gene abundance as a measure of biomass of specific groups of soil microorganisms	204
7.5.7.	Component specific analyses of microbial products	204
7.6.	Isotopic composition of microbial biomass and signal molecules	205
7.6.1.	Isotopic composition of microbial biomass	207

7.6.2.	Stable-isotope probing (SIP) of fatty acids, ergosterol, and nucleic acids	207
7.6.3.	Growth rates from signature molecules and leucine/thymidine incorporation	208
7.7.	Physiological analyses	209
7.7.1.	Culture studies, isolation, and characterization of specific organisms	209
7.7.2.	Isolation and characterization of specific organisms	209
7.7.3.	Microbial growth and respiration	210
7.7.4.	Nitrogen mineralization	213
7.8.	Enzyme activities	213
7.8.1.	Spectrophotometric methods	214
7.8.2.	Fluorescence methods	216
7.9.	Imaging microbial activities	217
7.10.	Functional diversity	219
7.11.	Ecological approaches to understand and manipulate community composition	220
	References and Suggested Reading	223
8.	The spatial distribution of soil biota and their functions	229
	<i>Serita D. Frey</i>	
8.1.	Introduction	229
8.2.	The biogeography of soil biota and their functions	230
8.3.	Vertical distributions within the soil profile	234
8.4.	Microscale heterogeneity of soil organisms	239
8.5.	Summary	243
	References	243
9.	Biotic metabolism in soil	247
	<i>Alain F. Plante, Maura Slocum, Kevin Geyer, and William B. McGill</i>	
9.1.	Introduction	247
9.2.	Foundations of soil biotic metabolism	248
9.2.1.	Stoichiometry	248
9.2.2.	Redox reactions	248
9.2.3.	Energetics	250
9.2.4.	Role of enzymes in metabolism	253
9.3.	Metabolic classification of soil organisms	254
9.4.	Cellular energy transformations	256
9.5.	Examples of biotic metabolism in soil	258
9.5.1.	Organotrophy	258
9.5.2.	Lithotrophy	262
9.5.3.	Phototrophy	264
9.6.	Unifying views of biotic metabolism in soil	265
9.6.1.	Interconnected cycles of electrons	265
9.6.2.	Carbon use efficiency	269
	Supplemental Reading	273
