5. Clinical assessment tools 65

Benjamin M. Davies, Alvaro Yanez Touzet and Michael G. Fehlings

Introduction

What is degenerative cervical myelopathy? Why are clinical assessments important to DCM? 65

65

65

67

67

68

101

102

Aim of this chapter

What are we trying to measure in

degenerative cervical myelopathy? Potential constructs: "don't forget to ask the patients"

Conventional magnetic resonance	
imaging of spinal cord	102
Quantitative magnetic resonance imaging	
and its benefits in spinal cord	102
Spinal cord atrophy using T2*-weighted	
MRI	103
Diffusion magnetic resonance imaging	
of the spinal cord	103
Myelin imaging of the spinal cord	106
Functional magnetic resonance imaging	
of the spinal cord	107
Conclusion	108
References	108

Building a core outcome set:

"towards identifying the critical constructs" 71 Standardizing the reporting of core data elements 72 **Considerations** for a clinical assessment 74 Research versus clinical care 74 Generic versus disease-specific 74 Measurement properties 75 Taxonomy of measurement properties 76 Definitions of measurement properties 76 Feasibility and interpretability 76 Types of studies available 76 Primer on the COSMIN method for evaluating measurement properties 78 **Current assessments used in DCM and their** evidence base 78 Current assessments 78 Building a core measurement set 79

Neurophysiology and advanced 7. dynamic assessments in degenerative cervical myelopathy 113 Paulina S. Scheuren, Carl M. Zipser, Markus Hupp, Jan Rosner, Nikolai Pfender, Martin Schubert, Michèle Hubli and Armin Curt Introduction 113 Advanced neurophysiological measures of spinal cord impairment 113 Conventional neurophysiological techniques to assess segmental and long tract damage 113 Sensitivity of advanced neurophysiological techniques to assess segmental damage 114
