Preface	v
---------	---

Chapter 1

On the Genesis of Problem Posing in Mathematics.....	1
1.1 Problems from the first printed arithmetic	1
1.1.1 Solving a 15 th century problem using the modern-day pedagogy	3
1.1.2 Posing 15 th century-like problems through conceptualization.....	5
1.1.3 Using technology for posing 15 th century-like problems	6
1.2 From a classic problem to using the modern spreadsheet.....	8
1.2.1 The birth of the probability theory through problem posing	8
1.2.2 Using a spreadsheet as a problem-posing tool	11
1.2.3 Duality of the spreadsheet's use	13
1.3 The Problem of the Grand Duke of Tuscany	14
1.4 Conjecturing as posing problems to find proof.....	17
1.5 Problem posing in a classic context as a springboard into experimental mathematics.....	19
1.5.1 Triangular numbers with identical digits.....	20
1.5.2 Triangular number sieves	20
1.6 Problem posing as setting up a research program.....	22
1.7 Summary	25

Chapter 2

From a Theory of Problem Posing to Classroom Practice of the Digital Era.....	27
2.1 Problem posing as educational philosophy	27
2.2 Problem posing in the modern educational context	29
2.3 Learning to ask questions about posed/solved problems	32

2.4	Technology as a cultural support of problem posing	35
2.5	Numerical coherence in problem posing	36
2.5.1	Using a spreadsheet to pose a numerically coherent problem.....	38
2.6	Contextual coherence in problem posing.....	41
2.7	Pedagogical coherence in problem posing.....	44
2.8	Didactical coherence in problem posing.....	48
2.9	Summary	49

Chapter 3

Posing Technology-Immune/Technology-Enabled (TITE) Problems .	51
3.1 From teaching machine movement to symbolic computations	51
3.2 Technological advances call for the revision of mathematics curriculum	54
3.3 Definition of a TITE problem and a simple example	58
3.4 Revisiting classic problems in the digital era under the umbrella of the TITE concept	60
3.5 Conceptual bond and arithmetical word problems.....	67
3.5.1 Looking at the past to develop new teaching ideas	67
3.5.2 Posing similar problems	68
3.6 Revisiting mathematical problems to make them didactically coherent	71
3.6.1 From numerical to contextual coherence	71
3.6.2 Towards pedagogical coherence.....	73
3.7 From modeling data to a general formula using technology	74
3.8 Formulating and solving a didactically coherent problem ...	75
3.9 <i>Maple</i> -based mathematical induction proof	78
3.10 Summary	82

Chapter 4

Linking Algorithmic Thinking and Conceptual Knowledge through Problem Posing.....	85
4.1 On the hierarchy of two types of knowledge	85
4.2 A simple question leads to revealing hidden creativity	89
4.3 Two levels of conceptual understanding.....	92

4.4	Solving a problem seeking information	93
4.5	Problem posing leads to conceptual knowledge and collateral learning.....	95
4.6	Using conceptual bond in posing problems with technology	99
4.7	Summary	102

Chapter 5

Using Graphing Software for Posing Problems in Advanced

High School Algebra.....	105
5.1 Introduction.....	105
5.2 Location of roots of quadratics about an interval.....	107
5.3 Digital fabrication	110
5.4 Connecting the coordinate plane with the plane of coefficients.....	112
5.4.1 The case RREE.....	112
5.4.2 The case RERE.....	113
5.4.3 The case REER.....	113
5.4.4 The case EREER.....	114
5.4.5 The case EERR.....	115
5.4.6 The case ERRE.....	116
5.5 Using Vieta's Theorem	116
5.6 Posing TITE problems in the plane of parameters.....	119
5.7 Geometric probabilities and the partitioning diagram	123
5.8 Making mathematical connections.....	125
5.9 Revealing hidden concepts through collateral learning	128
5.10 Summary	130

Chapter 6

Einstellung Effect and Problem Posing	133
6.1 Examples of Einstellung effect	133
6.2 Water jar experiments and Einstellung effect	138
6.3 Posing and solving problems as a remediation of Einstellung effect	141
6.4 Posing problems for water jar experiments using a spreadsheet	143
6.5 Einstellung effect in finding areas on a geoboard.....	144

6.6	Einstellung effect in solving algebraic equations and inequalities	149
6.7	Einstellung effect in solving trigonometric inequalities	153
6.8	Using technology to pose problems that might lead to Einstellung effect	156
6.9	Einstellung effect in solving logarithmic inequalities.....	159
6.9.1	Simultaneous extension and contraction of solution set.....	159
6.9.2	Extension of solution set	162
6.10	Solving logarithmic inequality (6.21) in the general case.....	166
6.10.1	The case $n = 2k$	166
6.10.2	The case $n = 2k + 1$	172
6.11	Summary	176

Chapter 7

Explorations with Integer Sequences as TITE Problem Posing.....	179
7.1 Introduction.....	179
7.2 Exploring patterns formed by the last digits of the sums of powers of integers	180
7.3 Discovering patters in the last digits of the polygonal numbers.....	186
7.3.1 The triangular number sieves	186
7.3.2 Triangular number sieves and the last digits of their terms	188
7.3.3 Rises and falls in permutations.....	189
7.3.4 Connecting triangular and square numbers within the multiplication table.....	189
7.3.5 The square number sieves	191
7.3.6 The pentagonal number sieves	193
7.3.7 The general case of the m -gonal number sieves	195
7.4 Patterns in the behavior of the greatest common divisors of two polygonal numbers.....	200
7.5 Exploring sequences formed by the sums of powers of integers	202
7.6 Exploring sieves developed from the sums of powers of integers	204

7.7 Summary	207
Appendix	209
8.1 Spreadsheets included in Chapter 1	209
8.2 Spreadsheets included in Chapter 2	210
8.3 Spreadsheets included in Chapter 3	211
8.4 Spreadsheets included in Chapter 4	212
8.5 Spreadsheets included in Chapter 6	212
8.6 Spreadsheets included in Chapter 7	213
Bibliography	217
Index	233
