List of contributors	vii
Introduction to applied environmental genomics	xi
 Section A: Biodiversity	 1
1 Design considerations for eDNA metabarcoding surveys	2
William Bernard Perry, Kirthana Pillay, Paul George, Georgina Brennan, Abigail Lowe, Laura Jones, Luke Holman, Tom Gibson, Natasha de Vere and Simon Creer	
2 Measuring biodiversity with eDNA metabarcoding	14
Antton Alberdi, Iñaki Odriozola, Raphael Eisenhofer and Ostaizka Aizpurua	
3 Perspective – eDNA and metagenomics: a story of a disruptive technology for biodiversity monitoring	28
Peter Gilchrist	
4 Revealing animal diet and food webs through DNA metabarcoding	30
Bruce E. Deagle, Johan Pansu, Julie McInnes and Michael Traugott	
5 Approaching ecological questions using DNA barcodes	46
Michael Stat and Katrina West	
 Section B: Life history and population biology	 53
6 Lifespan estimation from genomic analysis	54
Benjamin Mayne and Christopher Faulk	
7 Development of epigenetic clocks	62
Simon Jarman, Benjamin Mayne and Tom Little	
8 Molecular sex identification for applications in conservation, industry and veterinary medicine	74
Clare E. Holleley, Sarah L. Whiteley, Floriaan Devloo-Delva, Andreas Bachler, Joshua Llinas and Arthur Georges	
9 Perspective – Whole genome assemblies, devils and disease	102
Carolyn J. Hogg, Emma Peel, Yuanyuan Cheng and Katherine Belov	
10 Genetic-based inventories of wildlife abundance	107
Garth Mowat, Joseph D. Clark, Alexander Kopatz, Clayton Lamb and Anita J. Norman	
11 The practical magic of close-kin mark-recapture	120
Mark V. Bravington and Emma L. Carroll	

12	Perspective – Genomics and bear management	137
	Michael Proctor	
13	How can we use genomics to predict and improve population viability?	140
	Fred W. Allendorf, Nils Ryman and Marty Kardos	
Section C: Adaptation and change		155
14	Adaptive responses to the environment and environmental change	156
	Orly Razgour, Jesse R. Lasky, Thibaut Capblancq and Brenna R. Forester	
15	Perspective – The power of genomics for guiding reintroductions	174
	Helen Taylor	
16	Palaeo- and museo-genomics: perspectives on modern species	176
	Alicia Grealy, Lauren C. White, Emily Roycroft and Jeremy J. Austin	
17	Perspective – Genomics and the prioritisation of taxa and populations for conservation	197
	Catherine Darst	
Section D: Environmental molecular physiology		199
18	Applied epigenomics in a rapidly changing world	200
	M. Teresa Boquete, Sabrina M. McNew and Christina L. Richards	
19	DNA-based microbial bioindication of environmental state	220
	Jodie van de Kamp, Ángel Borja and Andrew Bissett	
20	Perspective – The promise of ecotoxicogenomics for assessing aquatic health	239
	Alvine C. Mehinto	
Section E: Spatial genomics		241
21	Unravelling plant-pollinator interactions through pollen DNA analysis	242
	Liz Milla and Francisco Encinas-Viso	
22	Genomic approaches to study dispersal in wild animal populations: implications for wildlife management	255
	Hugo Cayuela, Jérôme G. Prunier and Quentin Rougemont	
23	Conservation prioritisation based on evolutionary distinctiveness of communities	272
	Renee A. Catullo, Christiana McDonald-Spicer and Craig C. Moritz	
Section F: Biosecurity and disease monitoring		285
24	Invasive species detection and management using genomic methods	286
	Katarina C. Stuart, Andrew P. Woolnough and Lee A. Rollins	
25	Genomic identification and surveillance of infectious diseases in natural systems	299
	Jocelyn P. Colella, Stephen E. Greiman, Susan Kutz, Holly L. Lutz and Joseph A. Cook	

26	Management of vertebrate pests using genetic control techniques	318
	Anna C. Clark, Alana Alexander, Jackson Champer, Rey Edison, Mandira Katuwal and Neil J. Gemmell	
27	Perspective – The ‘E’ in RD&E and the application of genomics for environmental and biosecurity risk management	338
	Geoff Grossel	
	Glossary	340
