

CONTENTS

- 1 Introduction 1
- 2 Literature review 3
 - 2.1 Taxonomy..... 3
 - 2.1.1 Classification and distribution of the *Persea* genus 3
 - 2.2 Origin and history 5
 - 2.2.1 Theories on the center of origin for avocado species 5
 - 2.2.2 The three avocado races 6
 - 2.3 Domestication process 8
 - 2.3.1 Ancient utilization of avocado by the Mayan culture 9
 - 2.3.2 Avocado domestication and the influence of Mayan culture 10
 - 2.4 Avocado botanical description 11
 - 2.5 Biology 12
 - 2.5.1 Flowering..... 12
 - 2.5.2 Pollination..... 15
 - 2.5.3 Optimal growth conditions 16
 - 2.5.4 Environmental and social footprint of avocado cultivation 18
 - 2.6 Propagation methods..... 18
 - 2.6.1 Propagation through sowing seeds 18
 - 2.6.2 Propagation by grafting 19
 - 2.7 Best management practices for avocado production 21
 - 2.8 World avocado production 22
 - 2.8.1 Production trends and statistics 22
 - 2.8.2 Leading avocado-producing countries 24
 - 2.9 Chemical composition and nutritional value 25
 - 2.10 Medicinal properties 28
 - 2.10.1 Use of avocado in traditional medicine 28

2.10.2	Treatment for atherosclerosis, angina pectoris, and Alzheimer's disease	29
2.10.3	Remedy for digestion and blood sugar balance.....	30
2.11	Exploring avocado germplasm diversity: Guatemala and Ethiopia	30
2.12	Genetic markers in plant sciences.....	31
2.12.1	Morphological markers	32
2.12.2	Cytological markers.....	34
2.12.3	Biochemical markers	35
2.12.4	DNA-based molecular markers	36
2.13	Native avocado trees.....	42
3	Objectives and Hypotheses	44
4	Methodology.....	46
4.1	Study site and sampling in Guatemala	46
4.2	Variability analysis of native Guatemalan avocado germplasm based on agro-morphological traits.....	48
4.2.1	Measurement of qualitative and quantitative morphological traits	48
4.2.2	Data analysis.....	50
4.3	Genetic diversity and population structure of native Guatemalan avocado using AFLP and SSRs markers	52
4.3.1	DNA isolation.....	52
4.3.2	AFLP protocol	52
4.3.3	SSR protocol.....	53
4.3.4	Data analysis.....	54
4.4	Selection of a core collection of avocado genotypes for long term conservation based on agro-morphological traits and molecular markers	57
4.4.1	Development of the core collection.....	57

4.4.2	Assessment of the core collections.....	58
4.5	Comparison of the genetic diversity of Guatemalan and Ethiopian avocado germplasm	60
4.5.1	Study site and sampling in Ethiopia	60
4.5.2	DNA isolation.....	61
4.5.3	SSR markers and PCR amplification	62
4.5.4	Data analysis.....	62
5	Results.....	64
5.1	Variability analysis of native Guatemalan avocado germplasm based on agro-morphological traits.....	64
5.1.1	Quantitative traits	64
5.1.2	Qualitative traits	68
5.1.3	Factorial Analysis of Mixed Data.....	71
5.1.4	Population structure.....	75
5.1.5	Hierarchical Cluster of Principal Components.....	76
5.2	Genetic diversity and population structure of native Guatemalan avocado using AFLP and SSRs markers	83
5.2.1	Population genetic diversity	83
5.2.2	Population divergence	89
5.2.3	Population genetic structure	94
5.2.4	Joint analysis of phenotypic and molecular data.....	104
5.3	Selection of a core collection of avocado genotypes for long term conservation based on agro-morphological traits and molecular markers	
	108	
5.3.1	Assembly and quality evaluation of the core collections	108
5.3.2	Comparative evaluation of the core collection with the entire native Guatemalan avocado germplasm collection	110
5.4	Comparison of the genetic diversity of Guatemalan and Ethiopian avocado germplasm	116

5.4.1	SSR polymorphism and genetic diversity	116
5.4.2	AMOVA analysis	119
5.4.3	Population stratification.....	120
5.4.4	Genetic differentiation and population structure	121
5.4.5	Similarity among the avocado genotypes.....	123
5.4.6	Population structure analysis	125
5.4.7	Principal coordinates analysis	127
6	Discussion	129
6.1	Variability analysis of native Guatemalan avocado germplasm based on agro-morphological traits.....	129
6.1.1	Quantitative traits	129
6.1.2	Qualitative traits	130
6.1.3	Factorial analysis of mixed data (FAMD).....	134
6.1.4	Population structure.....	135
6.1.5	Hierarchical cluster of principal components (HCPC).....	136
6.2	Genetic diversity and population structure of native Guatemalan avocado using AFLP and SSRs markers	139
6.2.1	Genetic diversity.....	139
6.2.2	Population genetic divergence.....	143
6.2.3	Population genetic structure	145
6.2.4	Joint analysis of phenotypic and molecular data.....	147
6.3	Selection of a core collection of avocado genotypes for long term conservation based on agro-morphological traits and molecular markers	150
6.3.1	Assembly and quality evaluation of the core collections	150
6.3.2	Comparative evaluation of the core collections with the whole native Guatemalan avocado.....	151
6.4	Comparison of the genetic diversity of Guatemalan and Ethiopian avocado germplasm.	153

6.4.1	Polymorphism diversity of SSR markers	153
6.4.2	Population genetic diversity	154
6.4.3	Genetic differentiation and genetic structure	156
7	Conclusions.....	160
8	Application and practical implications of the research findings.....	163
9	References.....	166
10	Apendices.....	xxi
10.1	Curriculum vitae	xxix
