

# Obsah

1. Introduction.....	10
2. History of forests at Klokočná.....	12
3. Natural conditions.....	15
3.1 Geological and soil conditions.....	15
3.2 Climatic conditions.....	15
3.3 Phytogeographical and typological classification.....	16
4. Management objective and principles.....	17
4.1 Management objective.....	17
4.1.1 Species composition.....	17
4.1.2 The mission of the demonstration object.....	20
4.2 Management principles.....	20
4.2.1 Overview of Operating Principles.....	22
5. Selective harvesting.....	27
5.1 Selection in terms of production and wood harvest.....	27
5.2 Selection Principles.....	28
5.3 Selection Advantages.....	31
5.4 Selection Disadvantages.....	33
6. Cultivation issues of selective management.....	35
6.1 The importance of the silviculture point of view in selection interventions..	36
6.2 The influence of the upper storey.....	36
6.3 How the lower storey influences making selections.....	38
6.3.1 Working with volunteer fir and light-demanding species.....	38
6.3.2 Notes on individual tree species.....	40
6.4 Aspects of making selections in relation to the middle storey.....	41
6.5 Aspects of making withdrawals in relation to the upper storey.....	43
6.6 Pioneer tree species.....	43
7. Tending of stands.....	46
7.1 Principle of reasonable approach.....	46
7.2 The role of competition between individuals.....	47
7.3 Tending in a selection method.....	48
7.3.1 The period of new growth and damage by wild animals.....	48
7.3.2 The pole stand period.....	49
7.3.3 The transition to middle storey.....	50
7.4 The subtleties of tending a selection system forest.....	51
7.5 Problematic relationships between the middle and upper storeys.....	53
7.6 Tending in single-storey stands.....	54
8. Economic management regulations for non-clearcut forests.....	56
8.1 Assessing the state of the forest and economic planning.....	57
8.1.1 Types of forest development.....	57

8.1.2 Forest Stand Types.....	58
8.2 Repeated statistical operational inventories of the forest and their results....	60
8.2.1 Methodology of statistical operational forest inventory.....	60
8.2.2 Results.....	62
8.2.2.1 Stand volume.....	62
8.2.2.2 Thickness structure.....	63
8.2.2.3 Average tree heights.....	64
8.2.2.4 Total current increment.....	65
8.2.2.5 Regeneration of stands.....	66
8.2.2.6 Development of stands towards the target state.....	68
8.3 Demonstration Area.....	69
9. Economic manifestations of the reconstruction.....	72
9.1 Method of obtaining, processing and evaluating the results achieved.....	72
9.2 Economic results of tending and harvesting activities.....	74
9.2.1 Overview of average costs and timber sales.....	74
9.2.2 Cleaning of logging residues.....	75
9.2.3 Artificial forest regeneration.....	76
9.2.4 Fencing.....	77
9.2.5 Use of repellents against game.....	78
9.2.6 Weed control.....	79
9.2.7 Cleaning.....	80
9.2.8 Total costs of silvicultural operations.....	81
9.3 Economic results of harvesting operations.....	82
9.3.1 Timber output.....	82
9.3.2 Logging costs.....	82
9.3.3 Skidding costs.....	83
9.3.4 Total costs of logging operations.....	84
9.3.5 Timber sales.....	85
9.3.6 Total efficiency of forest management.....	86
10. Conclusion.....	87
