

What is ecology?	4
The big questions	6
What do ecologists do?	8
Why is ecology important?	10

Chapter 1: The basics 13

How is life organized? How does life adapt to its environment, survive and thrive?

Chapter 2: Ecosystems explained 33

Find out how every part of an ecosystem works together to keep things balanced. What does it mean to be **resilient**? How do **feedback loops** work? And why is **biodiversity** so important?

Chapter 3: What's going wrong? 61

Ecosystems are constantly changing, but in the last two centuries these changes have accelerated for one main reason – people. Ecologists investigate what's happening and why.

Chapter 4: A fight worth having

85

Ecologists have LOTS of ideas about how to help restore ecosystems. Many of the solutions are in the hands of governments and big businesses. Getting them to make changes won't be easy, but it's a fight worth having.

Chapter 5: Being an ecologist

107

As well as being a science, ecology is also a way of seeing the world. Find out how you can be an ecologist and live in an ecologically-minded way.
