

Content

1. Introduction.....	8
1.1 Linear analysis in homogeneous material.....	8
1.2 Nonlinear reinforced concrete beam model.....	9
2. Objectives of Dissertation	11
2.1 Outline of Dissertation.....	11
3. Investigating Shear Stress in Prismatic Beams With Complex Cross-Section	12
3.1 Numerical Approach for Determining a Solution.....	12
3.1.1 Saint Venant Torsion Problem.....	12
3.1.2 Saint Venant Torsionless Bending Problem.....	13
3.2 Implementation of the Finite Element Approach.....	14
3.3 Verification examples.....	17
3.3.1 Saint Venant Torsion Problem.....	17
3.3.2 Saint Venant Torsionless Bending Problem.....	18
4. 2D-1D Numerical Modeling of Shear Lag Phenomenon in Elastic Beams	21
4.1 Revisiting the Theoretical Formulas for Shear Lag Analysis in Flexural Beams.....	21
4.2 Numerical Analysis with Finite Element Method.....	24
4.2.1 Deflection $w(x)$, rotation angle θ_y , and bending warping parameter η_y	24
4.2.2 Warping functions, ϕ_{CY}^P , $\tilde{\Phi}_{CY}^S$	25
4.3 Numerical Verification Cases.....	25
5. The Effect of Shear Deformation on Restrained Torsional Warping in Thin-Walled Beams	28
5.1 A concise overview of the theoretical equations for nonuniform torsion with the inclusion of shear deformation.....	28
5.2 Procedural Techniques for FEM Analysis.....	30
5.2.1 The angle of twist θ_x and torsion warping parameter η_x	30
5.2.2 Warping functions ϕ_S^P , ϕ_S^S	31
5.3 Evaluation and Verification of Computational Results.....	31
6. Introduction to Advanced Beam Theory for Homogeneous Material: Key Concepts and Formulations	33
7. Nonlinear Finite Element Model for Reinforced Concrete Beams.....	35
7.1 Simplifying the Nonlinear Analysis of Structural Systems.....	35
7.2 Algorithm Performance.....	36
7.3 Section Stiffness.....	37
7.4 Verification and Validation of the Numerical Method.....	38
8. Conclusions and Recommendations for Future Research.....	48
References	50
Related Author's Publications.....	54
