

Content:

Preface.....	5
Findings on experimental half-timbered walls after 35 years	
Ulrich Arnold.....	7
The effect of waste fibres and alternative raw materials on the properties of autoclaved aerated concrete	
Šimon Baránek.....	10
Adapting Historical Buildings to Climate Change: Balancing Authenticity with Resilience	
Camille Luna Stella Blavier	12
Climate neutrality in Hamburg's Speicherstadt World Heritage Site - is it possible?	
Harald Garrecht	16
Geometric Analysis of Gothic Windows	
Vladimíra Hájková.....	19
Verification of the effectiveness of water-soluble hydrophobic agents on the properties of cement composites	
Jakub Hodul	22
Refurbishment + Parametricism, Case study: “Sokel”(Stone Plinth)	
Pavol Jaroš, Tomáš Baroš	24
Strength grading of timber in historic structures – methodology and practical application	
Gunter Linke	29
Chitosan as a Key Component in the Production of Sustainable Acrylic Glass-Wood Laminates	
Paul Marten.....	31
The Influence Of Internal Hydrophobization On The Properties Of Cement-Based Materials	
Kalina Materak	34
Chitosan as an Eco-Friendly Binder for High-Strength Fibreboards in Sustainable Construction	
Nils Münstermann.....	37

Preserve, reuse or recycle brick masonry - criteria for decision-making	
Claudia Neuwald-Burg.....	41
Possibilities of regulating the internal microclimate using sorption-active elements	
Jitka Peterková	44
Rehabilitation of historic buildings found on wooden piles	
Jakub Řehák.....	46
Durability and cracking defects in 3D printed concrete	
Aigerim Tolegenova.....	50
Opportunities and Possibilities Hidden in Green Deal and Circular Economy for Material Science and Civil Engineering	
Eva Tůmová	53
The use of instrumental analyses for the diagnostics of coatings on wooden structures	
Adéla Valentová	55
Monitoring strains and displacements in a vaulted church: effects of major structural interventions and temperature fluctuations	
Els Verstrynge.....	57
Alkaline hydrogels as multifunctional repair materials	
Oliver Weichold.....	60
Renewable Polyester Resin Systems for Sustainable Construction Materials	
Fabian Weitenhagen	62
