

Abbreviations, xxiii

CHAPTER 1

Introduction, 1

Ada Hamosh • Stephen W. Scherer •

Ronald Doron Cohn

The Birth and Development of Genetics and Genomics, 1

Genetics and Genomics in Medicine, 1

Evolution of Genetics in Medicine, 2

CHAPTER 2

Introduction to the Human Genome, 5

Ada Hamosh • Stephen W. Scherer

The Human Genome and the Chromosomal Basis of Heredity, 5

Variation in the Human Genome, 13

Transmission of the Genome, 13

Human Gametogenesis and Fertilization, 20

Medical Relevance of Mitosis and Meiosis, 22

CHAPTER 3

The Human Genome: Gene Structure and Function, 23

Stephen W. Scherer

Information Content of the Human Genome, 23

The Central Dogma: DNA → RNA → Protein, 24

Gene Organization and Structure, 26

Fundamentals of Gene Expression, 29

Gene Expression in Action, 31

Epigenetic and Epigenomic Aspects of Gene Expression, 34

Gene Expression as the Integration of Genomic and Epigenomic Signals, 38

Allelic Imbalance in Gene Expression, 39

Variation in Gene Expression and its Relevance to Medicine, 43

CHAPTER 4

Human Genetic Diversity: Genomic Variation, 45

Stephen W. Scherer • Ada Hamosh

The Nature of Genetic Variation, 45

Inherited Common Variation in DNA, 47

The Origin and Frequency of Different Types of Mutation, 50

Types of Mutation and their Consequences, 53

Variation in Individual Genomes, 56

Impact of Genomic Variation, 57

CHAPTER 5

Principles of Clinical Cytogenetics and Genome Analysis, 61

Dimitri J. Stavropoulos

Introduction to Cytogenetics and Genome Analysis, 61

Chromosome Abnormalities, 68

Chromosome and Genome Analysis in Cancer, 77

CHAPTER 6

The Chromosomal and Genomic Basis of Disease:

Disorders of the Autosomes and Sex Chromosomes, 79

Feyza Yilmaz • Christine R. Beck • Charles Lee

Mechanisms of Abnormalities, 79

Whole Chromosome Aneuploidy, 79

Uniparental Disomy, 83

Structural Variants and Clinical Impact, 83

Disorders Associated with Genomic Imprinting, 92

The Sex Chromosomes and their Abnormalities, 94

Technologies used in Diagnostic Testing, 104

Databases of Genomic Variants, 105

CHAPTER 7

Patterns of Single-Gene Inheritance, 109

Neal Sondheimer

Overview and Concepts, 109

Pedigrees, 111

Patterns of Inheritance, 112

Autosomal Patterns of Mendelian Inheritance, 113

Characteristics of Autosomal Recessive Inheritance, 115

Autosomal Dominant Inheritance, 116

X-Linked Inheritance, 119

Pseudoautosomal Inheritance, 124

Mosaicism, 124

Parent-of-Origin Effects on Inheritance Patterns, 126

Dynamic Mutations: Unstable Repeat Expansions, 126

Maternal Inheritance of Disorders Caused by Variants in the Mitochondrial Genome, 129

Correlating Genotype and Phenotype, 131

Importance of the Family History in Medical Practice, 131

CHAPTER 8

Principles of Clinical Epigenetics, 135

Sarah Goodman • Cheryl Cytrynbaum • Rosanna Weksberg

Introduction, 135

Epigenetic Machinery, 136

Epigenetics in Development, 136

The Environment Interacts with the Epigenome, 138
The Role of Epigenetics in Human Disease, 140
Categories of Epigenetic Disorders, 140
Diagnostic Testing for Epigenetic Disorders, 145
DNA Methylation and Cancer Diagnostics, 146
Treatment for Neurodevelopmental Disorders Caused by Pathogenic Variants in Epigenetic Regulators, 147
Future Directions, 147

CHAPTER 9

Complex Inheritance of Common Multifactorial Disorders, 149

Cristen J. Willer • Gonçalo R. Abecasis

Qualitative and Quantitative Traits, 149
Familial Aggregation and Correlation, 151
Determining the Relative Contributions of Genes and Environment to Complex Disease, 154
Examples of Common Multifactorial Diseases with a Genetic Contribution, 159
Examples of Multifactorial Traits for Which Specific Genetic and Environmental Factors are Known, 165
The Challenge of Multifactorial Disease with Complex Inheritance, 172

CHAPTER 10

Population Genetics for Genomic Medicine, 175

Alice B. Popejoy

Introduction to Population Genetics for Genomic Medicine, 175
Human Origins and Founder Effects of Serial Migration, 176
Defining Human Populations to Characterize Diversity, 178
Allele and Genotype Frequencies, 186
Genomic Variation and Biases in Population Datasets, 197

CHAPTER 11

Identifying the Genetic Basis for Human Disease, 203

Christian R. Marshall

Genetic Basis for Linkage Analysis and Association, 203
Strategies for Discovery of Disease-Associated Genes, 210
Mapping Human Disease Genes by Linkage Analysis, 212
Finding Genes Responsible for Disease by Genome-Wide Sequencing, 221
Filtering Strategies for Identification of Disease-Causing Genes, 224

CHAPTER 12

The Molecular Basis of Genetic Disease, 231

Gregory Costain

General Principles and Lessons from the Hemoglobinopathies, 231

Effect of Pathogenic Variants on Protein Function, 231
How Variants Disrupt the Formation of Biologically Normal Proteins, 233
The Relationship between Genotype and Phenotype in Genetic Disease, 233
Human Hemoglobin and Associated Diseases, 234
The Hemoglobinopathies, 237

CHAPTER 13

The Molecular, Biochemical, and Cellular Basis of Genetic Disease, 251

Ada Hamosh

Diseases Due to Pathogenic Variants in Different Classes of Proteins, 251
Diseases Involving Enzymes, 252
Altered Protein Function Due to Abnormal Posttranslational Modification, 258
Defects in Receptor Proteins, 263
Transport Defects, 267
Disorders of Structural Proteins, 270
The Effect of Gene Duplication and Retained Function on Phenotype: Spinal Muscular Atrophy, 277
Neurodegenerative Disorders, 278
Diseases of Mitochondrial DNA (mtDNA), 282
Diseases Due to the Expansion of Unstable Repeat Sequences, 287

CHAPTER 14

The Treatment of Genetic Disease, 293

Ronald Doron Cohn • Ada Hamosh

The Current State of Treatment of Genetic Disease, 293
Special Considerations in Treating Genetic Disease, 295
Treatment by the Manipulation of Metabolism, 296
Treatment to Increase the Function of the Affected Gene or Protein, 300
Gene Therapy, 312
Precision Medicine: the Present and Future of the Treatment of Mendelian Disease, 317

CHAPTER 15

Developmental Genetics and Birth Defects, 321

Anthony Wynshaw-Boris • Ophir Klein

Developmental Biology in Medicine, 321
Introduction to Developmental Biology, 325
Genes and Environment in Development, 326
Basic Concepts of Developmental Biology, 328
Cellular and Molecular Mechanisms in Development, 337
Interaction of Developmental Mechanisms in Embryogenesis, 344
Concluding Comments, 345

CHAPTER 16

Cancer Genetics and Genomics, 347

*Michael F. Walsh**Germline Versus Somatic, 347**Neoplasia, 347**Genetic Basis of Cancer, 349**Cancer in Families, 352**Familial Occurrence of Cancer, 362**Sporadic Cancer, 362**Cytogenetic Changes in Cancer, 365**The Role of Epigenetics in Cancer, 366**Applying Genomics to Individualize**Cancer Therapy, 367**Cancer and the Environment, 369***CHAPTER 17**

Genetic Counseling and Risk Assessment, 373

*Carolyn Dinsmore Applegate • Jodie Marie Vento**Genetic Counseling, 373**Clinical Genetics, 373**Risk Assessment, 375**Family History Risk Assessment, 375**Risk Communication and Perception, 376**Determining Recurrence Risks, 376**General Principles of Risk Estimation, 377**Empirical Recurrence Risks, 383**Reproductive Options, 384**Genetic Counseling in the Era of Genomic
Medicine, 385***CHAPTER 18**Preconception and Prenatal Screening and
Diagnosis, 391*Angie Child Jelin • Ignatia B. Van den Veyver**Prenatal Screening Methods, 391**Prenatal Diagnostic Procedures, 398**Laboratory Studies, 400**Preconception Genetic Screening and Testing, 405**Fetal Surgical and Medical Interventions, 406**Genetic Counseling for Preconception and Prenatal
Diagnosis and Screening, 407***CHAPTER 19**Application of Genomics to Medicine and
Individualized Health Care, 411*Ronald Doron Cohn • Iris Cohn**Genetic Screening in Populations, 411**Pharmacogenomics, 414**Pharmacogenomics as a Complex Trait, 417**Screening for Genetic Susceptibility to Disease, 417**Individualized Genomic Medicine, 422**Precision Child Health, 423***CHAPTER 20**

Ethical and Social Issues in Genetics and Genomics, 425

*Bartha Maria Knoppers • Ma'n H. Zawati**Principles of Biomedical Ethics, 425**Ethical Dilemmas Arising in Medical Genetics, 425**Privacy of Genetic Information, 429**Artificial Intelligence and Increased
Digitization, 431**Use of Genetic Information by Employers and
Insurers, 432**Eugenic and Dysgenic Effects of Medical
Genetics, 432**Genetics and Genomics in Medicine, 433*

Clinical Case Studies Illustrating Genetic Principles, 435

Janet A. Buchanan

Glossary, 595

Answers to Problems, 615

Index, 631
