Preface *ix*

Overview *xi*

1 How Do Genes Work? *1*

1.1 DNA, Genes and Proteins *1*

1.2 Gene Control, Homeostasis and Epigenetics *4*

1.3 DNA Methylation and Regulation of Gene Expression *5*

1.4 Post-transcriptional Regulation of Gene Expression *6*

1.5 Promoters and Enhancers *7*

1.6 Mutation Genotype, Phenotype, Epigenotype *8*

1.7 Conclusion *9*

Task *11*

Further Reading *11*

2 What is Epigenetics? *15*

2.1 Properties and Functions of Heterochromatin and Euchromatin *16*

2.2 DNA Methylation *18*

2.3 DNA Demethylation *20*

2.4 Chromatin Remodelling: Post-translational Modifications of
Histone Proteins *22*

2.5 Non-coding RNAs *26*

2.6 Polycomb Proteins *27*

2.7 Conclusion *29*

Task *30*

Reference *30*

Further Reading *31*

3	Epigenetic Mechanisms, Homeostasis and Potential for Manipulating the Epigenome	33
3.1	Pharmaceutical	33
3.2	DNA Methylation and Impact on Nutrition	34
3.3	Diet and Cancer Prevention	36
3.4	Dietary DNMT Inhibitors	37
3.5	Dietary HDAC Inhibitors	39
3.6	Dietary Modulators of ncRNAs	41
3.7	Precautions and Issues with Dietary Chemoprevention	41
3.8	Epigenetics and Inflammation/Immune Response	43
3.9	Epigenetic Inheritance Mechanisms	43
3.10	X-inactivation	45
3.11	Genomic Imprinting	46
3.12	Transgenerational Epigenetic Inheritance	48
3.13	Conclusion	53
	Task	53
	References	53
	Further Reading	54
4	Tissues and Methods for Epigenetic Analyses	57
4.1	Methods for Assessing Genome-Wide DNA Methylation-EPIGENOMICS	59
4.2	Methods for Assessing Genome-Wide Histone Modifications	60
4.3	Integrative Analysis – Looking at DNA Methylation and Histone Modification	61
4.4	Novel Technologies	62
4.5	Single-Cell Approaches	62
4.6	ncRNAs	63
4.7	Oxidised DNA Methylation	64
4.8	Data Analysis	64
4.9	Conclusion	65
	Task	65
	References	67
	Further Reading	68
5	Normal and Abnormal Epigenetic Variation	69
5.1	Epigenetics and Trained Immunity	72
5.2	Epigenetics and Vascular Senescence	73
5.3	Epigenetics and Obesity	74
5.4	Epigenetics and Cumulative Toxin Exposure: Toxicopigenomics	76
5.5	Epigenetics, COVID-19 and Environmental Chemical Exposures	79

5.6	Case Focus: Rheumatology	80
5.7	Conclusion	81
	Task	82
	References	83
	Further Reading	84
6	Cancer Epigenetics	91
6.1	DNA Methylation and Role in Cancer Development	93
6.2	Histone Modification and Role in Cancer Development	94
6.3	Non-coding RNAs and Role in Cancer Development	95
6.4	Chromatin Remodelling and Role in Cancer Development	96
6.5	DNA Damage Response and Role in Cancer Development	97
6.6	Epigenetics and Metabolic Programming in Cancer	99
6.7	Summary	100
6.8	Epigenetic Alterations in Cancer and Therapeutic Design	101
6.9	Conclusion	103
	Task	104
	Further Reading	104
7	Mental Health Epigenetics	107
7.1	Specific Genes of Interest with Regards to Mental Health	108
7.1.1	<i>NR3C1</i> – Glucocorticoid Nuclear Receptor Variant 1	109
7.1.2	<i>SLC6A4</i> – Serotonin Transporter	110
7.1.3	<i>BDNF</i> – Brain-Derived Neurotrophic Factor	111
7.1.4	<i>OXTR</i> – Oxytocin Receptor	111
7.2	Specifically Focussing on Schizophrenia	111
7.3	Transgenerational Epigenetic Influences on Predisposition to Psychiatric Disorders	112
7.4	Suicide/PTSD	114
7.5	Stress, Epigenetics and Transgenerational Epigenetic Inheritance: Consequences of Inequity/Deprivation	114
7.6	Conclusion	117
	Task	118
	References	118
	Further Reading	119
8	Developing a Project	121
8.1	Considerations for Epigenetic Research	121
8.1.1	What Is Meaningful in Terms of Tissue Analysed?	121
8.1.2	What Are the Health Promotion/Public Health Consequences?	122
8.1.3	What Are the Consequences of Epigenetic Intervention?	123

8.1.4	How Do We Design Epigenetic Drugs?	124
8.1.5	What Does Predictive Epigenetic Testing Look Like?	127
8.2	Conclusion	128
8.3	Getting Started	129
	Why Do Epigenetic Research? What Do You Want to Achieve?	129
	Reference	132
	Further Reading	132
	Index	135
