Preface	xix
Who this book is for	xx
What this book covers	xx
What's new in this edition?	xxii
Installation instructions	xxiv
Conventions used	xxvi
Chapter 1: Thinking Probabilistically	1
Statistics, models, and this book's approach	2
Working with data	3
Bayesian modeling	4
A probability primer for Bayesian practitioners	5
Sample space and events • 5	
Random variables • 9	
Discrete random variables and their distributions • 11	
Continuous random variables and their distributions • 16	
Cumulative distribution function • 18	
Conditional probability • 20	
Expected values • 22	
Bayes' theorem • 23	
Interpreting probabilities	26

Probabilities, uncertainty, and logic	28
Single-parameter inference	29
The coin-flipping problem • 29	
Choosing the likelihood • 30	
Choosing the prior • 31	
Getting the posterior • 33	
The influence of the prior • 37	
How to choose priors	38
Communicating a Bayesian analysis	41
Model notation and visualization • 41	
Summarizing the posterior • 42	
Summary	44
Exercises	45
Chapter 2: Programming Probabilistically	49
Probabilistic programming	50
Flipping coins the PyMC way • 51	
Summarizing the posterior	54
Posterior-based decisions	57
Savage-Dickey density ratio • 58	
Region Of Practical Equivalence • 59	
Loss functions • 61	
Gaussians all the way down	64
Gaussian inferences • 64	
Posterior predictive checks	68
Robust inferences	70
Degrees of normality • 71	
A robust version of the Normal model • 72	
InferenceData	76

Groups comparison	78
The tips dataset • 80	
Cohen's d • 83	
Probability of superiority • 84	
Posterior analysis of mean differences • 85	
Summary	87
Exercises	88
Chapter 3: Hierarchical Models	91
Sharing information, sharing priors	92
Hierarchical shifts	93
Water quality	97
Shrinkage	100
Hierarchies all the way up	103
Summary	107
Exercises	108
Chapter 4: Modeling with Lines	111
Simple linear regression	112
Linear bikes	114
Interpreting the posterior mean • 116	
Interpreting the posterior predictions • 119	
Generalizing the linear model	120
Counting bikes	121
Robust regression	123
Logistic regression	126
The logistic model • 126	
Classification with logistic regression • 129	
Interpreting the coefficients of logistic regression • 131	
Variable variance	133

Hierarchical linear regression	136
Centered vs. noncentered hierarchical models • 139	
Multiple linear regression	141
Summary	144
Exercises	145
Chapter 5: Comparing Models	147
Posterior predictive checks	148
The balance between simplicity and accuracy	154
Many parameters (may) lead to overfitting • 154	
Too few parameters lead to underfitting • 156	
Measures of predictive accuracy	157
Information criteria • 158	
<i>Akaike Information Criterion</i> • 159	
<i>Widely applicable information criteria</i> • 160	
<i>Other information criteria</i> • 160	
Cross-validation • 161	
<i>Approximating cross-validation</i> • 162	
Calculating predictive accuracy with ArviZ	164
Model averaging	167
Bayes factors	168
Some observations • 170	
Calculation of Bayes factors • 171	
<i>Analytically</i> • 171	
<i>Sequential Monte Carlo</i> • 174	
<i>Savage–Dickey ratio</i> • 175	
Bayes factors and inference	178
Regularizing priors	179
Summary	181
Exercises	182

Chapter 6: Modeling with Bambi 185

One syntax to rule them all	186
The bikes model, Bambi's version	190
Polynomial regression	193
Splines	195
Distributional models	198
Categorical predictors	200
Categorical penguins • 200	
Relation to hierarchical models • 203	
Interactions	204
Interpreting models with Bambi	207
Variable selection	209
Projection predictive inference • 211	
Projection predictive with Kulprit • 212	
Summary	217
Exercises	218

Chapter 7: Mixture Models 221

Understanding mixture models	222
Finite mixture models	224
The Categorical distribution • 226	
The Dirichlet distribution • 226	
Chemical mixture • 227	
The non-identifiability of mixture models	229
How to choose K	231
Zero-Inflated and hurdle models	234
Zero-Inflated Poisson regression • 235	
Hurdle models • 237	
Mixture models and clustering	240

Non-finite mixture model	241
Dirichlet process • 241	
Continuous mixtures	247
Some common distributions are mixtures • 247	
Summary	248
Exercises	250
Chapter 8: Gaussian Processes	253
Linear models and non-linear data	254
Modeling functions	255
Multivariate Gaussians and functions	257
Covariance functions and kernels • 258	
Gaussian processes	261
Gaussian process regression	262
Gaussian process regression with PyMC	262
Setting priors for the length scale • 266	
Gaussian process classification	267
GPs for space flu • 270	
Cox processes	271
Coal mining disasters • 272	
Red wood • 274	
Regression with spatial autocorrelation	277
Hilbert space GPs	282
HSGP with Bambi • 285	
Summary	286
Exercises	287
Chapter 9: Bayesian Additive Regression Trees	289
Decision trees	290

BART models	292
Bartian penguins •	293
Partial dependence plots •	295
Individual conditional plots •	296
Variable selection with BART •	297
Distributional BART models	300
Constant and linear response	302
Choosing the number of trees	304
Summary	305
Exercises	305
Chapter 10: Inference Engines	307
Inference engines	308
The grid method	309
Quadratic method	312
Markovian methods	314
Monte Carlo •	314
Markov chain •	316
Metropolis-Hastings •	317
Hamiltonian Monte Carlo •	322
Sequential Monte Carlo	324
Diagnosing the samples	327
Convergence	328
Trace plot •	328
Rank plot •	330
$\hat{R}$ (R hat) •	331
Effective Sample Size (ESS)	333
Monte Carlo standard error	335
Divergences	336
Keep calm and keep trying	338

Summary	339
Exercises	340
Chapter 11: Where to Go Next	343
