INTRODUCTION 7

1. TRANSPORT MARKET AND INFRASTRUCTURE CAPACITY
ALLOCATION PROCESS 9

1.1. European transport policy 11

1.2. Capacity Allocation Process 13

1.3. Coordination of timetables..... 17

2. TIMETABLING PROCESS 22

2.1. Train traffic diagram sheet and other documents..... 22

2.3. Quantitative and qualitative normatives 28

2.3.2. Train length and train weight..... 28

2.3.3. Train speeds 29

2.3.4. Other qualitative indicators 32

2.4. Time normatives in the train traffic diagram 33

2.4.1. Running times..... 33

2.4.2. Dwell times..... 41

2.4.3. Operating intervals 43

2.4.4. Headway times 49

3. ESTIMATION OF RAILWAY INFRASTRUCTURE CAPACITY 52

3.1. Throughput efficiency..... 56

3.2. Methodologies for throughput efficiency and capacity estimation 59

3.2.1. Graphical-analytical method for constructed timetable..... 62

3.2.2. Analytical methods for perspective timetable..... 63

3.2.3. Simulation methods for capacity estimation..... 68

3.2.4. International Railway Union approach for capacity estimation..... 73

4. RAILWAY CAPACITY UTILISATION FACTORS 81

4.1. Railway capacity and timetabling 81

4.2.	Factors affecting capacity utilisation.....	84
4.2.1.	<i>Signalling</i>	85
4.2.2.	<i>Node capacity constraints</i>	87
4.2.3.	<i>Train routing at stations</i>	87
4.2.4.	<i>Dwell time</i>	89
4.2.5.	<i>Rolling stock</i>	92
4.2.6.	<i>Infrastructure</i>	93
4.2.7.	<i>Timetable quality</i>	95
4.3.	Capacity utilisation according to the analytical approach.....	99
4.4.	Capacity utilisation according to the UIC methodology.....	100
4.5.	Comparative analysis of approaches to capacity utilisation.....	103
4.6.	Customer requirements for rail infrastructure capacity utilisation.....	108
4.7.	Problems in railway infrastructure utilisation	111
4.7.1.	<i>Lack of efficient train paths for freight trains on rail corridors and nodes</i>	111
4.7.2.	<i>Application of the integrated timetable for passenger trains</i>	116
4.7.3.	<i>Increase in "ad hoc" train path requirements</i>	120
4.7.4.	<i>New approaches to capacity management</i>	121
5.	APPLICATED RESEARCH OF RAILWAY CAPACITY UTILIZATION.....	126
5.1.	Dependences of railway capacity utilisation.....	126
5.1.1.	<i>Characteristics of the simulation model</i>	129
5.1.2.	<i>Testing of the model</i>	130
5.1.3.	<i>Dependence analysis of capacity consumption development</i>	132
5.1.4.	<i>Analysis of the capacity utilisation in a block section</i>	135
5.2.	Interactive platform for ad hoc capacity allocation.....	137
5.2.1.	<i>Formulation of the basic inputs and outputs</i>	138
5.2.2.	<i>Functional chart of the train path selection and allocation</i>	139
5.3.	Capacity of corridor lines after modernization.....	150
5.3.1.	<i>Modernisation measures evaluation at corridor line</i>	151
5.3.2.	<i>Variant proposals</i>	156

5.4.	Infrastructural measures for increasing the capacity of Freight corridors....	158
5.4.1.	<i>Research methods</i>	160
5.4.2.	<i>Capacity results</i>	162
5.4.3.	<i>Capacity measures</i>	166
5.4.4.	<i>Determination of throughput performance for combination of speed-increasing proposals</i>	180
5.5.	Traffic capacity assessment after the implementation of ETCS LEVEL 3..	184
5.5.1.	<i>Railway line section</i>	187
5.5.2.	<i>Capacity assessment for ETCS L3 variant</i>	190
5.5.3.	<i>Determination of headway times</i>	191
5.5.4.	<i>Calculation of the practical throughput by the ŽSR methodology</i>	193
5.5.5.	<i>Mutual comparison of the resulting practical throughput of individual proposals</i>	194
5.5.6.	<i>Final evaluation of the research</i>	195
5.6.	Stability evaluation of train timetables in operational and infrastructural point of view	197
5.6.1.	<i>Node capacity constraints</i>	198
5.6.2.	<i>Procedure for evaluation of timetables stability</i>	198
5.6.3.	<i>Determination of condensation and compensation zones</i>	199
5.6.4.	<i>Practical application of the proposed methodology</i>	201
