1	The Interstellar Medium	1
1.1	Overview	1
1.2	The Dusty ISM	5
1.3	Interstellar Radiation Field	8
1.4	Photodissociation Regions	8
1.5	Cosmic Rays	11
1.6	Detection of H_2	13
1.7	Life Cycle of the Stars and the ISM	14
	References	15
2	Nebulae	17
2.1	Ionization and Recombination of Hydrogen	17
2.2	Categories of Nebulae	19
2.2.1	Diffuse (Emission) Nebulae	20
2.2.2	Planetary Nebulae	21
2.2.3	Supernova Remnants	22
2.2.4	Reflection and Dark Nebulae	23
2.3	Photoionization Equilibrium	24
2.4	Heating and Cooling Mechanisms	27
2.5	R-Type Expansion	28
2.6	D-Type Expansion	29
2.6.1	Further Discussion	32
	References	34
3	Triggered Star Formation	35
3.1	Overview	35
3.2	Gravitational Collapse	38
3.3	Instabilities During the D-Type Phase	40
3.3.1	Vishniac Instability	40
3.3.2	Rayleigh-Taylor Instability	42
3.4	Collect and Collapse	44

3.5	Radiation-Driven Implosion	46
3.6	The Formation of Our Solar System	47
	References	49
4	Numerical Simulations	51
4.1	Introduction	51
4.2	Methods Followed in Numerical Simulations	53
4.2.1	Grid-Based Methods.....	54
4.2.2	Smoothed Particle Hydrodynamics Methods.....	55
4.2.3	Hybrid Methods.....	57
4.3	Simulations	57
4.3.1	Spherically Symmetric Expansion	59
4.3.2	Off-Center Expansion	59
4.3.3	Radiation Driven Implosion	62
4.3.4	Fractal Clouds.....	62
4.4	Synthetic Observations	64
	References	66
5	Summary	69
