Preface	xv
Part I	
<b>Biomimicry education: Tools and perspectives</b>	<b>1</b>
<b>1 Biom*: On becoming a teachable discipline</b>	<b>3</b>
<i>Shoshanah Jacobs and Kristina Wanieck</i>	
1.1 Introduction	3
1.2 What is a discipline?	7
1.3 Teaching the skills of biomimetics	16
1.4 Conclusion	19
References	20
<b>2 Introduction to bio-inspired materials: Design, processing and applications</b>	<b>25</b>
<i>Seyed M. Allameh and Avery Lenihan</i>	
2.1 Introduction	25
2.2 Natural materials: Novel structures, enhanced properties, and applications	26
2.3 Applications of bio-inspired polymers and related soft materials	33
2.4 Applications of biomimetics in materials science	37
2.5 Application of biomimicking in architecture	40
2.6 Advances in bio-inspired medical materials	42
2.7 Mimicking marine life	46
2.8 Summary and conclusions	47
References	48
<b>3 The pattern alphabet: Nature’s patterns are the language of spatial reasoning and biomimicry</b>	<b>57</b>
<i>Alex Wolf, Vijal Parikh and Isabella De Lisi</i>	
3.1 Introduction	57
3.2 The pattern alphabet	59

3.3	Spatial skills	79
3.4	Biomimicry	86
3.5	Points of engagement	91
3.6	Recommendations	99
3.7	Conclusion	101
	Acknowledgement	103
	References	103
4	<b>Material culture, design studies, and human ecology: A biocentered perspective</b>	107
	<i>Carlos Fiorentino and Megan Strickfaden</i>	
4.1	Introduction	107
4.2	Context of design innovation	108
4.3	Naturally material and cultural	110
4.4	The nature of design innovation	112
4.5	Inter-connected habitats natura	113
4.6	Innovating biocentered praxis	116
4.7	Conclusion	119
	References	120
5	<b>Inspiration from paleomimetics: Fossil does not equal failure</b>	123
	<i>Stephen P. Howe and Vikram Shyam</i>	
5.1	A chronology of world views on fossils, evolution and extinction	123
5.2	Biomimicry and extinction	124
5.3	Understanding the process and predictors of extinction	125
5.4	Yesterday informs today	129
5.5	Practical challenges and opportunities in paleomimesis	133
5.6	Conclusions	135
	Acknowledgments	136
	References	136
<b>Part II</b>		
	<b>Bio-inspired systems engineering and computer applications</b>	139
6	<b>Biomimicry for natural and synthetic composites and use of machine learning in hierarchical design</b>	141
	<i>Mario Milazzo, Flavia Libonati, Shengfei Zhou, Kai Guo and Markus J. Buehler</i>	
	List of abbreviations	141
6.1	Introduction	142

6.2	Natural materials and synthetic composites	144
6.3	Artificial intelligence in hierarchical design	159
6.4	Final remarks	163
	Acknowledgments	164
	References	164
<b>7</b>	<b>Tools, behavior, and materials: What should we learn from animal nest construction?</b>	<b>183</b>
	<i>Maria C. Tello-Ramos, Shoko Sugasawa, Meron Dibia and Hunter King</i>	
7.1	Introduction	183
7.2	Birds	187
7.3	Termites	197
7.4	Humans in context	203
7.5	Potential for biomimetic application	206
7.6	Conclusions	208
	References	209
<b>8</b>	<b>Sample digitization techniques for bio-inspired engineering</b>	<b>215</b>
	<i>Christin T. Murphy, Rolf Müller and Sunghwan Jung</i>	
8.1	Bioinspiration	215
8.2	Digitization	215
8.3	Case studies for research use	229
8.4	Future of digitization	238
	Acknowledgments	242
	References	242
<b>9</b>	<b>Assessment of an ant-inspired algorithm for path planning</b>	<b>247</b>
	<i>V. Sangeetha, R. Krishankumar, K.S. Ravichandran and Amir H. Gandomi</i>	
9.1	Introduction	247
9.2	Preliminaries	250
9.3	Enhanced gain-based ant colony optimization	255
9.4	Results and discussion	257
9.5	Conclusion	263
	Acknowledgment	264
	References	264

## Part III

# Bio-inspired innovation: Materials, manufacturing and applications 267

## 10 Functional synergy of biomimicry and additive manufacturing: Toward a bio-enhanced engineering approach 269

*Anton du Plessis and Chris Broeckhoven*

### 10.1 Introduction 269

### 10.2 Additive manufacturing technologies 271

### 10.3 The roles of additive manufacturing in biomimetic research 274

### 10.4 Workflow for additive manufacturing in biomimicry 281

### 10.5 Future outlook and potential 284

### Acknowledgements 284

### References 284

## 11 Smart textiles through bio-inspired innovation 291

*Kony Chatterjee, Shuzhen Wei and Tushar Ghosh*

### 11.1 Introduction 291

### 11.2 Biomimetic functional textile surfaces 292

### 11.3 Biomimetic textiles for thermal comfort 301

### 11.4 Biomimetic electronic textiles 308

### 11.5 Biomimetic actuation and morphing in textiles 312

### 11.6 Conclusion 322

### References 324

## 12 Polymerization in nature yields clues to innovation in additive manufacturing 337

*Thomas A. McKeag*

### 12.1 Introduction 337

### 12.2 Additive manufacturing 338

### 12.3 Phase one: Autodesk and the Ember stereolithography printer 341

### 12.4 The 2015 Greener Solutions graduate course 348

### 12.5 The 2019 Greener Solutions course: Safer materials proposed for this new SLA approach 362

### 12.6 Summary 363

### References 364

<b>13</b>	<b>Syntheses, mechanisms, and applications of bio-inspired self-cleaning surfaces</b>	<b>367</b>
	<i>Quan Xu, Travis Shihao Hu, Xiaowei Wang, Jie Wang and Zhenhai Xia</i>	
13.1	Introduction	367
13.2	Self-cleaning in wet conditions	369
13.3	Self-cleaning under dry conditions	377
13.4	Multi-functional self-cleaning surfaces	387
13.5	Summary	390
	Acknowledgements	390
	References	390
<b>14</b>	<b>Commercialization journeys: Bringing biomimetic innovation to the market</b>	<b>393</b>
	<i>Jacques Edouard Chirazi</i>	
14.1	Introduction: The value of ecosystem services	393
14.2	What is biomimicry?	395
14.3	Formulating an idea	396
14.4	Biomimicry design process	397
14.5	Innovative startups and small and medium enterprise	399
14.6	Evolution of entrepreneurship and sustainability	400
14.7	The innovation economy	402
14.8	The trifecta of desirability, feasibility, and viability (IDEO U)	406
14.9	Biomimicry as innovation	410
14.10	Biomimicry commercialization process	419
14.11	Key steps of the biomimetic innovation process	421
14.12	Conclusion	428
	References	430
	Appendix 14A. Technical feasibility and viability	432
	Appendix 14B. Business feasibility and viability	434
	Appendix 14C. Important factors impacting biomimicry technology	435

## Part IV

### **Biomimetic habitation: Architecture and sustainable environments** **437**

<b>15</b>	<b>Morphological differentiation for the environmental adaptation of biomimetic buildings: Skins, surfaces, and structures</b>	<b>439</b>
	<i>Lidia Badarnah and Katia Zolotovskiy</i>	
15.1	Introduction	439
15.2	Adaptive building solutions	440
15.3	Environmental adaptation in nature	442

15.4	Biomimetics: Functional convergences and multi-functionality	448
15.5	Morphological differentiation	450
15.6	Morphological applications for environmental adaptation: Skins—surfaces—structures	453
15.7	Conclusions	460
	References	461
<b>16</b>	<b>A case study in biomimetic roofing: Moisture dissipation from leaf-shaped shingles</b>	<b>467</b>
	<i>Ariana I.K.S. Rupp and Petra Gruber</i>	
16.1	Introduction	467
16.2	Study approach and methods	469
16.3	Study results	473
16.4	Discussion of study results	478
16.5	Conclusions	484
	Acknowledgements	485
	References	485
<b>17</b>	<b>Design studies and applications of mycelium biocomposites in architecture</b>	<b>489</b>
	<i>Onur Kirdök, Didem Akyol Altun, Hanaa Dahy, Lena Strobel, E. Esin Hameş Tuna, Gülden Köktürk, Özge Andiç Çakır, Ayça Tokuç, Feyzal Özkaban and Aylin Şendemir</i>	
17.1	Introduction	489
17.2	Mycelium as a biodesign collaborator	492
17.3	Potential use of mycelium in architectural design and construction: Overview of in-house efforts	499
17.4	Work of Biodesign Team Turkey on mycelium composites	503
17.5	Work of Stuttgart University on mycelium composites	510
17.6	Conclusion	521
	Acknowledgments	522
	References	522
<b>18</b>	<b>Green Harbors Project: Biomimicry in action</b>	<b>529</b>
	<i>Anamarija Frankić</i>	
18.1	Green Harbors Project overview	529
18.2	Why restore native oysters and their reefs?	531
18.3	Green Harbor Project in Wellfleet Harbor, MA, USA	536
18.4	Green Harbor Project results and discussion	540
18.5	Conclusion	547
	Acknowledgments	550
	References	552
	Index	557
