1. Atomically precise clusters of noble metals: An introduction 1

Thalappil Pradeep

References 4

2. Structure and chemical properties of clusters 5

Kumaranchira Ramankutty Krishnadas and Thalappil Pradeep

2.1 Introduction 5

2.2 Chemical reactivity at the nanoscale: Beyond surface to volume ratio 5

2.3 Chemical reactivity at the nanoscale: A brief historical overview 6

2.4 Chemical properties of atomically precise metal clusters: Insights from gas phase studies 5

2.4.1 Geometric versus electronic stability in unprotected, gaseous phase metal clusters 6

2.5 Molecule-like nature of ligand-protected atomically precise noble metal clusters 8

2.5.1 Superaatom concept for ligand-protected noble metal clusters 8

2.6 Chemistry of ligand-protected atomically precise noble metal clusters: A structural view 11

2.6.1 Substitution of ligands 11

2.6.2 Ligand-induced structural transformations 13

2.6.3 Substitution of metal atoms 14

2.7 Electrochemical properties of metal clusters 16

2.7.1 Reactions with metal ions 18

2.7.2 Reactions with halocarbons 19

2.8 Stereochemistry of ligand protected atomically precise metal clusters 20

2.8.1 Chirality due to the presence of chiral ligands 20

2.8.2 Chirality due to the chiral arrangement of achiral ligands on achiral metal core 21

2.8.3 Chirality due to inherently chiral metal core 21

2.8.4 Chirality due to encapsulation into chiral supramolecules or hosts 22

2.8.5 Chirality in metal clusters: structure-property correlations 23

2.9 Intercluster reactions 24

2.9.1 Reaction between $\text{Au}_{25}(\text{PET})_{18}$ and $\text{Ag}_{44}(\text{FTP})_{30}$ 24

2.9.2 Reaction between $\text{Au}_{25}(\text{FTP})_{18}$ and $\text{Ag}_{44}(\text{FTP})_{30}$: Shell closing effects in intercluster reactions 26

2.9.3 Reaction between $\text{Au}_{25}(\text{PET})_{18}$ and $\text{Ag}_{25}(\text{DMBT})_{18}$ 28

2.9.4 Dynamic nature of the clusters and intercluster reactivity 29

2.9.5 What triggers intercluster exchange reactivity?—The role of metal–ligand interface 31

2.9.6 Should the metal atoms be different for exchange reactivity: Isotope exchange between clusters 32

2.10 Understanding the reaction mechanisms: Where are we? 33

2.10.1 Mechanistic insights into intercluster reactions 33

2.10.2 Mechanisms of metal atom substitution reactions 36

2.11 Achieving atomic precision in cluster chemistry—A few examples 38

2.11.1 Single ligand exchange in a redox reaction 38

2.11.2 Site-selective substitution of metal atoms *via* reaction with metal–thiolates and metal–phosphine complexes 38

2.11.3 Site-selective Au atom substitution in $[\text{Ag}_{44}(\text{p-MBA})_{30}]^{4-}$ 41

2.12 Summary and future perspectives	41
References	43

3. Nanocluster assembled solids 49

Arijit Jana and Thalappil Pradeep

3.1 Introduction	49
3.2 Limitation of nanocluster solidification	49
3.2.1 Synthetic limitations	50
3.2.2 Purification	51
3.2.3 Stability of nanoclusters	52
3.3 Methods of nanocluster solidification	53
3.3.1 Crystallization	53
3.3.2 Gelation	54
3.4 Single crystal structure determination	54
3.5 Different types of nanocluster assembled solids	56
3.5.1 Nanocluster crystals	57
3.5.2 Nanocluster assembled gels	62
3.5.3 Nanoclusters in confined solid	63
3.6 Properties of nanocluster assembled solids	64
3.6.1 Photoluminescence	65
3.6.2 Conductivity	67
3.6.3 Magnetic property	68
3.6.4 Mechanical property	70
3.6.5 Catalytic property	70
3.6.6 Hypergolic property	75
3.7 Summary and future perspective	75
References	77

4. Optical properties of metal clusters 83

Bhuvanachandran Nair Sreekala Sooraj and Thalappil Pradeep

4.1 Introduction	83
4.2 Optical absorption spectroscopy	83
4.3 Optical spectroscopy of archetypal clusters	84
4.3.1 Au ₂₅ and Ag ₂₅	84
4.3.2 Ag ₄₄ and analogous clusters	85
4.3.3 Au ₃₈ , Au ₁₀₂ , and larger clusters	86
4.3.4 Size evolution and metallicity	87
4.4 Photoluminescence of clusters	89
4.5 Dynamics of excited states	92
4.5.1 Common methods and examples	92
4.6 Nonlinear processes	93
4.6.1 Two-photon absorption and emission	93
4.6.2 Second-order processes	94
4.6.3 Third-order processes	94
4.6.4 Optical limiting	95

4.7 Computational methods and optical properties	96
--	----

4.8 Summary and future perspectives	97
References	98

5. Supramolecular chemistry of nanoclusters 101

Abhijit Nag and Thalappil Pradeep

5.1 Introduction to supramolecular chemistry	101
5.2 Fullerenes	102
5.3 Cyclodextrins	103
5.4 Cucurbiturils	105
5.5 Crown ethers	106
5.6 Properties of supramolecular complexes of NCs	107
5.7 Applications of supramolecular complexes of NCs	108
5.8 Summary and future perspectives	108
References	109

6. Nanocluster–nanoparticle coassemblies 111

Amrita Chakraborty and Thalappil Pradeep

6.1 Introduction	111
6.2 Importance of colloidal assembly	112
6.3 NCs in colloidal assembly	114
6.3.1 NP–NC assembly leading to precise hierarchical structures	115
6.3.2 Assemblies leading to enhanced or emerging properties	117
6.4 NP–NC assembly leading to chemical modifications	121
6.4.1 Unique reactivity of silver NC toward TeNW	121
6.4.2 Atom exchange between Au NCs and Ag NPs	121
6.5 Summary and future perspective	123
References	124

7. Cluster-based metal–organic frameworks 129

Wakeel Ahmed Dar and Thalappil Pradeep

7.1 Introduction	129
7.2 Synthesis approaches for silver metal-based MOFs	130

7.3 Structural features	131
7.3.1 One-dimensional coordinated structures	132
7.3.2 Two- and three-dimensional coordinated structures	133
7.4 Properties of nanocluster frameworks	138
7.4.1 Stability	138
7.4.2 Structure transformation	140
7.4.3 Absorption properties	141
7.4.4 Luminescence properties	143
7.4.5 Single-to-dual emission transformation	148
7.4.6 Computational studies	149
7.5 Applications	149
7.5.1 Sensing	149
7.5.2 Dual-function luminescence switching	150
7.6 Summary and future perspectives	150
References	152

8. Synthesis of atomically precise clusters 157

Amoghavarsha R. Kini and Thalappil Pradeep

8.1 Introduction	157
8.2 Synthesis techniques of gold and silver nanoclusters	157
8.2.1 Brust–Schiffrin method	158
8.2.2 Modified Brust methods	158
8.2.3 Ligand exchange induced structural transformation (LEIST)	159
8.2.4 Solid-state synthesis	160
8.2.5 High-temperature synthesis	161
8.2.6 Other notable techniques	161
8.3 Synthetic techniques of gold and silver alloy nanoclusters	163
8.3.1 Coreduction method	163
8.3.2 Metal exchange method	163
8.3.3 Ligand exchange method	164
8.3.4 Metal deposition method	165
8.3.5 Intercluster reactions	166
8.4 Synthesis of nanoclusters with larger core (>100 metal atoms)	167
8.4.1 Au ₁₀₂ (p-MBA) ₄₄	167
8.4.2 Au ₁₉₁ (TBBT) ₆₆	167
8.4.3 Au ₂₄₆ (p-MBT) ₈₀	168
8.4.4 Au _{~2000} (SR) _{~290}	169
8.5 Summary and future perspectives	169
References	173

9. Chromatography and separation in nanocluster science 177

Korath Shivan Sugi and Thalappil Pradeep

9.1 Introduction	177
9.2 Various techniques used for the separation of NCs	177
9.2.1 Brief history of PAGE	179
9.2.2 Brief history of chromatography	179
9.3 Principle, instrumentation, and procedure of various separation techniques	181
9.3.1 Poly acrylamide gel electrophoresis (PAGE)	181
9.3.2 High-performance liquid chromatography	182
9.3.3 Thin layer chromatography (TLC)	183
9.4 Earlier studies on the separation of atomically precise nanoclusters	183
9.5 Separation of hydrophilic nanoclusters	183
9.5.1 PAGE	183
9.5.2 Ion-pair chromatography	186
9.5.3 Hydrophilic interaction liquid chromatography (HILIC)	186
9.6 Separation of hydrophobic NCs	187
9.6.1 Reversed phase-high performance liquid chromatography (RP-HPLC)	187
9.6.2 Size exclusion chromatography	190
9.6.3 Chiral chromatography	192
9.6.4 Thin layer chromatography (TLC)	193
9.7 Toward preparative scale separation of atomically precise nanoclusters	194
9.7.1 Preparative scale size exclusion chromatography (PSEC)	194
9.7.2 Preparative thin layer chromatography (PTLC)	194
9.8 Summary and future perspectives	195
References	197

10. Mass spectrometry of atomically precise clusters 203

Papri Chakraborty and Thalappil Pradeep

10.1 Introduction	203
10.2 Various techniques for ionization of NCs	204
10.2.1 Matrix-assisted laser desorption ionization (MALDI)	204
10.2.2 Electrospray ionization	205
10.3 Instrumentation	205

10.4	Mass spectrometry of ligand-protected metal NCs	207
10.4.1	Gold NCs	207
10.4.2	Silver NCs	209
10.4.3	Other metal NCs	210
10.4.4	Alloy NCs	211
10.4.5	Isotopically pure NCs	212
10.5	Mass spectrometry of adducts of NCs	212
10.6	Tandem mass spectrometry of NCs	213
10.6.1	Collision-induced dissociation	214
10.6.2	Surface-induced dissociation	215
10.7	Ion mobility mass spectrometry of NCs	216
10.7.1	Principle and instrumentation	216
10.7.2	Separation of gas-phase isomers and aggregates of NCs	218
10.7.3	Determining structures of NCs from IM MS	219
10.8	Mass spectrometry of metal NCs in macromolecular templates	220
10.9	Mass spectrometry of larger NCs	221
10.10	Summary and future perspectives	221
	References	222

11. Spectroscopy of gas phase cluster ions 227

Ananya Baksi and Thalappil Pradeep

11.1	Introduction	227
11.2	Trapped ion electron diffraction	228
11.2.1	Theory and instrumentation	228
11.2.2	Structure determination	228
11.3	Ion mobility spectrometry (IMS)	231
11.3.1	Instrumentation and fundamentals	231
11.3.2	IMS of bare nanoclusters	233
11.3.3	IMS of protected nanoclusters	240
11.4	Dissociation mass spectrometry	251
11.4.1	Dissociation of bare cluster ions	252
11.4.2	Dissociation of ligated cluster ions	252
11.5	Spectroscopic methods	253
11.5.1	Photo-dissociation (PD) and UV-vis spectroscopy	253
11.5.2	Photoelectron spectroscopy	254
11.5.3	IR spectroscopy	262
11.6	Summary and future perspectives	265
	References	266

12. Structure by single crystal X-ray diffraction 271

Mohammad Bodiuzzaman and Thalappil Pradeep

12.1	Introduction	271
12.1.1	Importance of crystal structures	271
12.1.2	Challenges	271
12.1.3	Developments	272
12.2	Crystallization	272
12.2.1	Slow evaporation	272
12.2.2	Solvent diffusion	272
12.2.3	Vapor diffusion	273
12.2.4	Solvothermal	273
12.3	Basic core structural building blocks	273
12.3.1	Face-centered cubic structures	273
12.3.2	Body-centered cubic structures	275
12.3.3	Hexagonal structures	275
12.3.4	Icosahedron	275
12.3.5	Tetrahedron	275
12.3.6	Decahedron	275
12.4	Growth of building blocks	276
12.4.1	Fusion	276
12.4.2	Layer by layer	276
12.5	Surface structure	277
12.6	Crystal structures of archetypal nanoclusters	278
12.6.1	Gold nanoclusters	278
12.6.2	Silver nanoclusters	281
12.7	Cocrystals	286
12.8	Summary and future perspectives	291
	References	292

13. Electron microscopy of clusters 299

Ananthu Mahendranath and Thalappil Pradeep

13.1	Introduction	299
13.2	Microscopy of naked clusters	299
13.3	Imaging structures using C_s corrected—TEM and single particle reconstruction	301
13.4	Electron micro-diffraction and nanobeam electron diffraction	304
13.5	Challenges and precautions in measurements	306
13.6	Analytical procedures for improved data collection	308

- 13.7 Beyond electron microscopes 308
- 13.8 Summary and future perspective 310
- References 310

14. Computational approaches for nanocluster science 313

Paulami Bose, Ganapati Natarajan and Thalappil Pradeep

- 14.1 Importance of computational approach in cluster science 313
- 14.2 Basics of computational methods and models 314
 - 14.2.1 Density functional theory 315
 - 14.2.2 Total energy and force methods 318
 - 14.2.3 Force fields, classical molecular dynamics, and Monte Carlo methods 318
 - 14.2.4 QM/MM and multiscale methods 319
 - 14.2.5 Transition states and reaction pathways 320
 - 14.2.6 TD-DFT and excited state methods 321
- 14.3 Electronic structure of monolayer protected nanoclusters from DFT 323
 - 14.3.1 Electronic stability of nanoclusters 323
 - 14.3.2 Superaatom model 323
 - 14.3.3 Valence electron count and models for the shell-closing number 324
 - 14.3.4 Projection of orbitals onto superatomic states (PDOS) 325
 - 14.3.5 Nonsuperaatomic nanoclusters 326
- 14.4 Structural prediction of nanoclusters 326
- 14.5 Spectroscopic property calculations 329
 - 14.5.1 Optical absorption spectroscopy 329
 - 14.5.2 Emission and luminescence spectra 331
 - 14.5.3 Mechanism of luminescence and its enhancements 331
 - 14.5.4 Vibrational circular dichroism spectra 332
 - 14.5.5 Raman spectra 332
 - 14.5.6 Surface plasmon 333
- 14.6 Catalysis and other property calculations 333
 - 14.6.1 Catalytic mechanisms 333
 - 14.6.2 Magnetic properties 334
 - 14.6.3 Electrochemical properties 337
 - 14.6.4 Thermodynamic and vibrational properties of nanoclusters 337
- 14.7 Summary and future perspectives 338
- References 339

15. Ag and Au nanoclusters 343

Udayabhaskararao Thumu and Thalappil Pradeep

- 15.1 Introduction 343
- 15.2 Journey from bulk to atomically precise nanoclusters 344
 - 15.2.1 The color difference in bulk Ag/Au metals 344
 - 15.2.2 Color tunability in Ag/Au nanoparticles (3–100 nm) 345
 - 15.2.3 Color exhibition in Ag/Ag NCs (1–3 nm) 347
 - 15.2.4 Melting properties of bulk to nanoclusters via nanoparticles 348
 - 15.2.5 Magnetic properties of bulk to nanoclusters via nanoparticles 349
 - 15.2.6 Transformation of crystal structures from bulk-to-nanoparticles-to-nanoclusters 351
 - 15.2.7 Variation of band structures from bulk to nanoclusters 351
 - 15.2.8 Calculation of transformation of plasmonic to nanoclusters 353
 - 15.2.9 Quantum confinement in thiolated-Ag and Au nanoclusters 355
- 15.3 Types of Ag and Au nanoclusters based on surface coverage 356
 - 15.3.1 Gas phase clusters 356
 - 15.3.2 Nanoclusters in inorganic templates 358
 - 15.3.3 Monolayer protected nanoclusters 359
 - 15.3.4 Polymer protected nanoclusters 363
 - 15.3.5 Biological scaffold templated nanoclusters 364
 - 15.3.6 Nanoclusters in emulsions 367
 - 15.3.7 Nanoclusters with hydrides and sulfides 368
- 15.4 Stability of atomically precise thiolate-protected Ag/Au NCs 368
 - 15.4.1 Decomposition pathways: fission or fusion 369
 - 15.4.2 Comparison of stability of Ag/Au NCs 369
 - 15.4.3 Effect of e-beam 369
 - 15.4.4 Solvent polarity 370
 - 15.4.5 Surface effects 371
 - 15.4.6 Electronic stability 371
 - 15.4.7 Geometric stability 372

- 15.4.8 Steric stability 372
- 15.4.9 Thermal stability 376
- 15.4.10 Oxidation state 379
- 15.4.11 Photostability 381
- 15.5 Nomenclature of nanoclusters 382
- 15.6 Summary and future perspectives 386
- References 387

16. Alloy nanoclusters 393

Esma Khatun and Thalappil Pradeep

- 16.1 Introduction 393
 - 16.1.1 General introduction of alloy 393
 - 16.1.2 Alloy nanotechnology from the ab initio perspective 393
 - 16.1.3 Alloy nanoparticles and nanoclusters 394
- 16.2 Various synthetic methodologies 396
 - 16.2.1 Coreduction 396
 - 16.2.2 Metal exchange 397
 - 16.2.3 Metal deposition 400
 - 16.2.4 Ligand exchange 400
 - 16.2.5 Interparticle reactions 402
 - 16.2.6 Reaction of nanoclusters with bulk metal 403
- 16.3 Structures of alloy nanoclusters 403
 - 16.3.1 Gold-rich alloys 404
 - 16.3.2 Silver-rich alloys 410
 - 16.3.3 Copper-rich alloys 413
- 16.4 Properties of multimetallic nanoclusters 415
 - 16.4.1 Optical properties 415
 - 16.4.2 Chirality 418
 - 16.4.3 Magnetism 419
- 16.5 Summary and future perspectives 419
- References 420

17. Naked clusters and ion chemistry of clusters 427

Madhuri Jash and Thalappil Pradeep

- 17.1 Introduction 427
- 17.2 Types of naked clusters 428
 - 17.2.1 Metal clusters 428
 - 17.2.2 Semiconductor clusters 429
 - 17.2.3 Ionic clusters 430
 - 17.2.4 Rare gas clusters 431
 - 17.2.5 Molecular clusters 431
 - 17.2.6 Cluster molecules 432

- 17.3 Mass spectrometry as a primary characterization technique of naked clusters 432
 - 17.3.1 Synthesis of naked clusters using various cluster sources 432
 - 17.3.2 Cluster growth and generation of cluster ions 435
 - 17.3.3 Synthesis of naked clusters from different precursors and ionization techniques 436
 - 17.3.4 Detection and analysis of naked clusters 441
 - 17.3.5 Reactivity of naked clusters in the gas phase 444
 - 17.3.6 Catalysis in gas phase 453
- 17.4 Other characterization methods of naked clusters 453
- 17.5 Solid-supported metal clusters/cluster assembled materials 453
- 17.6 Summary and future perspectives 455
- References 457

18. Atomic precision in other nanocluster systems: Chalcogenides 461

C.K. Manju, Anagha Jose and Thalappil Pradeep

- 18.1 Introduction 461
- 18.2 Synthetic approaches for copper and silver chalcogenide NCs 462
 - 18.2.1 Chalcogenide NCs from silylated chalcogenide sources 462
 - 18.2.2 CS₂ as chalcogen source 466
 - 18.2.3 Chalcogen release by the C-S bond cleavage 466
- 18.3 Structure and properties of copper and silver chalcogenide clusters 467
 - 18.3.1 Structure 467
 - 18.3.2 Optical properties 469
 - 18.3.3 Thermal properties 471
- 18.4 Tetrahedral nanoclusters of cadmium and zinc 474
 - 18.4.1 Series of tetrahedral nanoclusters 474
 - 18.4.2 Synthesis and crystallization 474
 - 18.4.3 Optical properties 476
 - 18.4.4 Hybrid materials based on tetrahedral NCs 477
- 18.5 Amine-protected magic sized nanoclusters 478
 - 18.5.1 Synthesis and properties 478
 - 18.5.2 Structure 481

18.6	Nanoclusters of Co, Ni, and Mn chalcogenides	482
18.6.1	Solution-phase synthesis of NCs	482
18.6.2	Structural characterization	483
18.6.3	Assembly of NCs into hierarchical solids	485
18.6.4	Collective properties	486
18.7	Understanding of chalcogenide NCs through mass spectrometry	488
18.8	Summary and future perspectives	491
