

## Contents

Hochman, M.: AGRITEC – 70th anniversary of agricultural research in Šumperk	13
<b>Genetic resources and diversity in legume plants</b>	14
Ellis, T.H.N.: The current state of gene isolation from pea	15
Smýkal, P.: Phylogeny and genetic diversity of <i>Pisum</i> and its <i>Vicieae</i> tribe allies	16
Wolko, B. et al.: Developing of genomic resources for narrow-leafed lupin ( <i>Lupinus angustifolius</i> L.)	17
Cholastová, T., Knotová, D.: Genetic diversity among alfalfa ( <i>Medicago sativa</i> L.) cultivars from Czech Republic	18
Hofer, J. et al.: Flower colour in pea ( <i>Pisum sativum</i> L.)	19
<b>Resistance to biotic and abiotic stresses</b>	20
Rubiales, D.: Resistance to biotic and abiotic stresses in pea and faba bean	21
Smýkal, P. et al.: Pea resistance genes to Pea seed-borne mosaic virus (PSbMV), from basic science to applications in breeding	22
Ondřej, V., Klenotičová, H., Švábová, L.: Pea somatic embryogenesis under microgravity conditions	23
Jarkovská, M.: Mendel 190 – Anniversary of G. J. Mendel's birth	24
Prášil, J., Horčíčka, P., Dostálová, R.: Breeding programmes on pea in the Czech Republic	25
Piwowarczyk, B., Kamińska, I., Rybiński, W.: Influence of the osmotic stress on shoot regeneration in <i>Lathyrus</i> culture	26
<b>Molecular methods in legume breeding</b>	27
Coyne, C.J.: Towards quality markers for breeding resistances to soil-borne pathogens of pea	28
Doležel, J. et al.: Chromosome genomics: A journey from legumes to cereals and back	29
Stawujak, K., Grzebelus, D.: Insertion site polymorphisms of <i>Tourist</i> -like MITEs in the genome in wild and cultivated <i>Medicago truncatula</i>	30
Macas, J.: Sequence composition and genome organization of pea repetitive DNA	31
Moravec, T.: The use of legume seed for expression and storage of high value proteins	32
Bobkov, S., Selikhova, T.: Composition of storage proteins in pea wild species <i>Pisum fulvum</i>	33

Ksiazkiewicz, M. et al.: Mining of the narrow-leafed lupin genome with SSR sequences: gene-rich regions sequencing and synteny analysis.....	34
Ištvánek, J. et al.: <i>De novo</i> assembly of <i>Trifolium pratense</i> genome .....	35
Kroc, M., Kamel, K., Święcicki, W.: Narrow-leafed lupin ( <i>Lupinus angustifolius</i> L.) comparative mapping.....	36
Okorska, S.B. et al.: <i>ps pall</i> (phenylalanine ammonia-lyase gene-1) sequence and expression in pea varieties challenged with <i>Mycosphaerella pinodes</i> .....	37
Święcicki, W. et al: Variability in seed oligosaccharide content in the mapping population of <i>Pisum sativum</i> L. ....	38
Święcicki, W., Knopkiewicz, M.: The usability of the HRM method in the analysis of SSR and SNP markers in the pea population.....	39
<b>Biotechnological methods utilisable in the extension of genetic variability; genetic transformation</b> .....	40
Noguero, M. et al.: Dissecting the role of the endosperm in regulating <i>Medicago truncatula</i> seed filling .....	41
Griga, M. et al.: Pathogen-Derived Resistance: Transformation of Pea for Virus Resistance – PSbMV Case Study.....	42
Bobkov, S.: Cultures of pea isolated anthers and microspores.....	43
Kondykov, I., Zelenov, A., Uvarov, V.: Use of exotic germplasm in pea breeding	44
Pankiewicz, K., Rybiński, W., Kaczmarek, Z.: Genetic variation in selected accessions of <i>Lathyrus</i> genus with the use of biotechnology.....	45
Wiszniewska, A., Piwowarczyk, B.: Is cell-wall reconstruction a bottleneck in legume regeneration via protoplast culture? .....	46
Švábová, L. et al.: Main results of transformation experiments with pea implemented in Agritec.....	47
Klenotičová, H. et al.: Transformation of faba bean ( <i>Vicia faba</i> L.) and PCR detection of transgenes.....	48
Zotikov, V. et al.: Biotechnological techniques in lentil and pea breeding.....	49
Donskaia, M., Suvorova, G.: Shoot regeneration in the isolated fragments of chickpea <i>Cicer arietinum</i> L. seedlings .....	50
<b>Crop management and food and non-food utilization of legumes</b> .....	51
Ćupina, B. et al.: Legume agronomy and their potential role in agricultural production .....	52
Hochman, M.: Recent state of legume growing in the Czech Republic.....	53

Gomuła, B. et al.: Assessment of the contribution of yield components to total seed yield in selected legumes .....	54
Dostálová, R. et al.: Resistant starch in pea and possibilities for its use .....	55
Huňady, I., Hochman, M., Ponížil, A.: Use of legume-cereal intercropping for increasing of self-sufficiency with animal fodder in organic farming .....	56
Mikić, A. et al.: Wild and locally grown annual legumes of Serbia have potential to serve as gene pools in developing novel cultivars .....	57
Mikić, A. et al.: Grain yield and grain yield components in autumn-sown lines of grass pea ( <i>Lathyrus sativus</i> ) .....	58
<b>Physiology and plant development of legume plants .....</b>	<b>59</b>
Balla, J. et al.: Shaping plant body architecture – lessons from pea .....	60
Suvorova, G.: Results of interspecific hybridization in the genus <i>Lens</i> Mill. ....	61
Pejić, B., Čupina, B.: Effect of irrigation on yield, yield components of vigna ( <i>Vigna unguiculata</i> (L.) walp) in agroecological conditions of the Vojvodina region .....	62
