Editor's Preface	IX
Preface	XI
Notation Frequently Used	XV
Chapter 1. Introduction	1
Chapter 2. A Brief Survey of Variational Methods	8
Part I. EXAMPLES	66
Chapter 3. Algorithm of the Method. Error Estimates	68
a) Algorithm of the method	68
b) Error estimates	81
Chapter 4. Linear Parabolic Problems	85
a) Illustrative examples	86
$\alpha$ ) Homogeneous initial conditions	86
$\beta$ ) Nonhomogeneous initial conditions	94
b) A nontrivial example	107
c) An equation with time-dependent coefficients	118
Chapter 5. A Nonlinear Problem	127
Chapter 6. An Integrodifferential Parabolic Problem	137
Chapter 7. A Problem with an Integral Condition	147
Chapter 8. Hyperbolic Problems	157
Chapter 9. An Application to Rheology	170
Part II. THEORETICAL ASPECTS OF THE METHOD OF DISCRE-	
TIZATION IN TIME	
Chapter 10. Introduction to Part II	185
Chapter 11. The Equation $\partial u / \partial t + Au = f$ . Existence and Conver-	
gence Theorem	187
Chapter 12. Regularity Questions. Error Estimates	219
a) Smoother solutions	219

$\alpha$ ) Regularity with respect to $t$	219
$\beta$ ) Regularity with respect to $x$	231
b) Error estimates	237
Chapter 13. Nonhomogeneous Initial and Boundary Conditions	247
a) Nonhomogeneous initial conditions. The very weak solution	249
b) Regularity of the very weak solution. Problem of error estimates	257
c) Nonhomogeneous boundary conditions	268
d) The problem (13.1)–(13.4)	274
Chapter 14. Approximate Solution of Elliptic Problems Generated by the Method of Discretization in Time	277
Chapter 15. Problem with Time-Variable Coefficients	283
Chapter 16. Nonlinear Parabolic Problems	305
a) Basic concepts. The Gâteaux differential	307
b) An existence and convergence theorem	314
c) Numerical solution of elliptic problems generated by the method of discretization in time	327
Chapter 17. Integrodifferential Parabolic Problems	335
Chapter 18. A Problem with an Integral Condition	358
Chapter 19. Hyperbolic Problems. Homogeneous Initial Conditions. Existence and Convergence Theorem. Error Estimate	382
a) Existence and convergence	382
b) Error estimate	399
Chapter 20. Hyperbolic Problems. Nonhomogeneous Initial Conditions	410
Chapter 21. Concluding Remarks	430
a) Some other properties of the obtained solutions	430
$\alpha$ ) Lipschitz continuity	430
$\beta$ ) $u \in L_\infty(I, V)$ , $u' \in L_\infty(I, L_2(G))$	431
$\gamma$ ) $u_n \rightarrow u$ in $C(I, V)$	431
b) Replacing $V$ -ellipticity by $V$ -coercivity	433
c) Concerning the function $f$	434
d) Time-dependent stable boundary conditions	437
e) Nonhomogeneous unstable boundary conditions	440
References	446
Subject index	449
