**Barbora Tupá**

Introduction

**Alena Rettová**

African languages have completely bewitched me

**Lenka Drábková**

For a lay person, DNA at the bottom of a test tube has very little to do with a living plant on a meadow

**Lucie Sedmihradská**

Perhaps it was a mistake to think that the difference between having one child and two children can't be so great. In fact it's a major change.

**Eva Muchová**

Chemistry is a science where things pop, light up and change colours

**Marcela Fejtová**

Most handicapped people desire to work and actively communicate with the world around them

**Doubravka Olšáková**

You can't just turn everything upside down and start writing 'herstory'

**Elena Buixaderas**

I just simply put grains of knowledge together

**Marie Prchalová**

You have to work hard on a relationship as well as on science

**Markéta Pokorná**

The first Czech woman mapping the seabed

**Eva Chodějovská**

Old maps are part works of art and part works of science
