Contents

O. Axelsson, R. Blaheta, V. Sokol
Multiscale modelling with Schwarz iterative methods 9

P. Bauer
Flow over a rough surface 13

M. Bečka, G. Okša, M. Vajteršic
On iterative QR pre–processing in the parallel block–Jacobi SVD algorithm 17

M. Beneš
Moving boundaries in material science 21

P. Beremlijski, M. Sadowská
Tvarová optimalizace pro 3D kontaktní problém diskretizovaný metodou hraničních prvků 22

M. Biák, D. Janovská
A parametric study of the dimensionless closed gas-liquid system 26

R. Blaheta, R. Kohut
Parameter identification in heat flow with a geo-application 29

M. Brandner, J. Egermaier, H. Kopincová
Numerical schemes for river flood modelling 33

J. Brož, J. Kruis
Selection strategy for fixing nodes in FETI-DP method 37

L. Buřič, A. Klíč
Canard traveling waves of the spruce budworm population model 41

P. Byzcanski, S. Sysala
Solving an elasto-plastic problem by Newton-like methods 45

M. Čertíková, P. Burda, J. Novotný, J. Šístek
Study of using corners for BDDC in 3D 49

Z. Dostál, J. Haslinger, T. Kozubek, R. Kučera
An algorithm for 3D contact problems with orthotropic friction 53

Z. Dostál, D. Horák
Preconditioning of FETI-DP using corners on contact interface 57

L. Dubcová, P. Šolín
Adaptive *hp*-FEM on dynamical meshes with application to a flame propagation problem 59

J. Duintjer Tebbens, G. Meurant
On the Ritz values that can be generated by the Arnoldi method 63

T. Hanus, D. Janovská
Potential and Hamiltonian in the Filippov systems 66

J. Havlíček, M. Hokr, J. Kopal, P. Rálek
Redukce diskrétní puklinové sítě a její vliv na řešení úlohy proudění 70

D. Janovská, G. Opfer
Two-sided quaternionic polynomials 74

V. Janovský
Stability of non unique solutions of the Coulomb friction problem 78

M. Jarošová, A. Klawonn, O. Rheinbach
FETI-DP averaging for the solution of variational inequalities 82

P. Kordík
Efficient optimization of hybrid neural networks 86

T. Kozubek
Parallel solution of engineering problems in mechanics using MatSol 90

J. Kruis, P. Mayer
Application of BOSS preconditioner to the fourth order problems 93

V. Kulvait
Computational analysis of stress concentration due to an elliptic hole in a degrading linearized elastic solid 97

T. Ligurský
Theoretical analysis of discrete contact problems with Coulomb friction 101

D. Lukáš, J. Szweda
Fast boundary elements for 3D Helmholtz equation 105

L. Lukšan, J. Vlček
A recursive formulation of limited memory variable metric methods 107

J. Mach
Quantitative analysis of numerical solution for the Gray-Scott model 110

Š. Papáček, C. Matonoha
Effect of hydrodynamic mixing on the photosynthetic microorganism growth: Revisited 114

J. Prokopová, M. Feistauer, V. Kučera, J. Horáček
Modelling of the airflow through vocal folds 118

I. Pultarová
Algebraic multilevel preconditioning of coarse problems of balanced domain decomposition methods with nodal constraints 122

S. Ratschan
Hybrid dynamical systems: verification and error trajectory search 125

I. Šimeček
Comparison of the sparse matrix storage formats 127

J. Šístek, P. Burda, J. Mandel, J. Novotný, B. Sousedík
Application of the BDDC method to the Stokes problem 131

I. Škarydová, M. Hokr
Modelování podzemního proudění jako sdružené úlohy v 3D-2D-1D geometrii se složitou diskretizací 135

J. Urban, J. Vaněk, D. Štys
Probabilistic system approach to LC-MS analysis 138

J. Vaněk, J. Urban, Dalibor Štys
Using graphic cards for high-performance computing tasks 141

J. Zítko, D. Nádhera
Behaviour of the augmented GMRES method 145
