

CONTENT

EMULSIONS (<i>Emulsiones</i>)	5
Task 1: Preparation of emulsions by an „English“ method	6
Task 2: Preparation of emulsions by a „continental“ method	7
Task 3: Preparation of emulsions by a method with emulsifier created „in situ“	8
Task 4: Preparation of emulsions with a complex emulsifier	8
Task 5: Determination of the emulsion type	10
Task 6: Measurement of surface tension by a drop method according to Traube – the effect of the type of emulsifier and/or emulsifier concentration	10
Task 7: Measurement of interfacial tension between oil/water	13
Task 8: The influence of various factors on the viscosity of emulsion	14
Task 9: Stability of emulsions with the content of different types of emulsifiers	15
Task 10: The effect of a temperature on the stability of emulsions	16
Task 11: Determination of a degree of dispersity of emulsions	17
Task 12: Determination of HLB value of surfactants	18
Task 13: Determination of HLB value of a mixture of surfactants	20
Task 14: Determination of a critical HLB value for an oil phase of emulsion	21
SUSPENSIONS (<i>Suspensiones</i>)	23
Task 15: Preparation of medicinal suspensions	24
Task 16: Preparation of concentrated suspensions (liquid powders) containing active substances with a different physical-chemical character	28
Task 17: The effect of a surface tension of various dispersion mediums to wettability of sulfur	29
Task 18: The effect of viscosity of a dispersion phase on the kinetic stability of suspensions	30
Task 19: Compatibility between zinc oxide and tannic acid in concentrated suspensions („liquid powders“)	32
Task 20: Incompatibility between zinc oxide and salicylic acid in concentrated suspensions („liquid powders“)	33
Task 21: Evaluation of physical properties of suspension	33
Task 22: The rate of sedimentation or rising of dispersed particles in heterogeneous environment	35
Task 23: The effect of viscosity on a dosage variability in stabilized and non-stabilized suspensions	37

SEMI-SOLID PREPARATIONS FOR CUTANEOUS APPLICATION

<i>(Praeparationes molles ad usum dermicum)</i>	39
OINTMENTS (<i>Unguenta</i>)	40
Task 24: Preparation of hydrophobic ointments (Oleounguenta)	40
Task 25: Preparation of water-emulsifying ointments (Unguenta emulsificans)	41
Task 26: Preparation of hydrophilic ointments (Hydrounguenta)	43
Task 27: Preparation of ointments containing dissolved active substances	44
Task 28: Preparation of ointments containing emulsified active substances (emulsion ointments)	45
Task 29: Preparation of ointment containing suspended active substances (suspension ointments)	46
Task 30: Preparation of suspension-emulsion ointments	48
CREAMS (<i>Cremores</i>)	51
Task 31: Preparation of lipophilic creams	51
Task 32: Preparation of „false“ lipophilic creams	53
Task 33: Preparation of hydrophilic creams	53
Task 34: Preparation of stearin creams	55
Task 35: Preparation of solution creams	56
Task 36: Preparation of suspension creams	58
PASTES (<i>Pastae</i>)	59
Task 37: Preparation of pastes	59
Task 38: The evaluation of ointment and cream bases	61
Task 39: The evaluation of rheological properties of medicinal preparations	64
SUPPOSITORIES, PESSARIES (<i>Suppositoria, Globuli vaginales</i>)	68
Task 40: Calculation of a Dosage replacement factor	70
Task 41: Preparation of suppositories by casting	72
Task 42: Preparation of suppositories by casting – experimental method	76
Task 43: Suppositorium glyceroli SFK 2015	78
Task 44: Preparation of suppositories and pessaries – experimental method according to Starke	78
Task 45: Disintegration of suppositories and pessaries (Ph. Eur. 2.9.2)	80
Task 46: Determination of softening and melting temperature of hydrophobic suppositories (PhBS III)	81
