

Contents

1	Statistical Methods of Analysis	1
1.1	Introduction	1
1.2	Significant Figures	1
1.3	Types of Errors and Their Causes	2
1.4	Precision and Accuracy	5
1.5	The Confidence Limit	9
1.6	Test of Significance	11
1.7	Rejection of Result	12
2	Sampling	17
2.1	Introduction	17
2.2	Gases	18
2.3	Diffusive Samplers	20
2.4	Real-Time Analysis	21
3	Spectroanalytical Techniques	27
3.1	Origin of Spectra	27
3.2	Interaction of Radiation with Matter	29
3.3	Fundamental Laws of Spectroscopy	30
3.4	Validity of Beer-Lambert's Law and Deviation from Beer-Lambert's Law	34
3.5	Types of Spectra	36
4	Ultraviolet and Visible Spectral Methods	41
4.1	Nature of Electronic Transitions	42
4.2	Instrumentation	42
4.3	Types of UV-Visible Spectrophotometers	49
4.4	Choice of Solvents	53
4.5	Concept of Chromophore	54
4.6	Shifting of Absorption Bands and Change in Intensity	55

4.7	Application of <i>UV</i> –Visible Spectral Methods	56
4.8	Molar Compositions	60
4.9	Quantitative Analysis	63
4.10	In Tautomeric Equilibria	66
5	Infrared Spectroscopy	69
5.1	Introduction	69
5.2	Molecular Vibrations, Vibrational Modes, and Vibrational Frequency	70
5.3	Theory of IR Absorption Spectroscopy	73
5.4	Instrumentation	75
5.5	Comparison of IR and <i>UV</i> –Visible Spectrophotometers	80
5.6	IR Fingerprint Regions	81
5.7	Application of IR Spectroscopy to Organic Compounds	82
5.8	Application of IR Spectroscopy to Inorganic Compounds	84
5.9	Quantitative Applications of FT-IR Spectroscopy	85
6	Atomic Absorption Spectroscopy	89
6.1	Basic Principles of Atomic Absorption Spectroscopy	89
6.2	Instrumentation	91
6.3	Single-and Double-Beam Atomic Absorption Spectrophotometers	98
6.4	Interferences in Atomic Absorption Spectroscopy	99
6.5	Atomic Line Broadening	101
6.6	Background Correction Methods	102
6.7	Application of Atomic Absorption Spectroscopy	104
7	Atomic Emission Spectroscopy	107
7.1	Introduction	107
7.2	Principles of Emission Spectroscopy	108
7.3	Flame Emission Spectroscopy (FES)	108
7.4	Distribution Between Ground and Excited States	109
7.5	Instrumentation of FES	111
7.6	Interferences in Flame Photometry	113
7.7	Evaluation of Results	114
7.8	Advantages of Flame Photometry	114
7.9	Plasma Emission Spectroscopy	115
	7.9.1 Inductively Coupled Plasma Source (ICP)	116
	7.9.2 ICP Instrumentation	118
	7.9.3 Application of ICP-AES	119
8	Thermal Methods	121
8.1	Introduction to Thermal Methods of Analysis and Its Instrumentation	121
8.2	Instrumentation of TG	122
8.3	Applications of Thermogravimetry	125
8.4	Differential Thermal Analysis (DTA)	127

8.5	Applications of DTA	128
8.6	Differential Scanning Calorimetry (DSC)	128
8.7	Applications of DSC	129
9	Electroanalytical Methods	131
9.1	Introduction	131
9.2	Classification of Electroanalytical Methods	131
9.3	Electrochemical Cells	133
9.4	Electrode Potential	134
9.5	The Nernst Equation	137
9.6	Potentiometry for Quantitative Analysis	141
9.7	Types of Electrodes	142
9.8	Potentiometric Titrations	150
9.9	Types of Potentiometric Titrations	154
9.10	Advantages of Potentiometric Titrations	159
10	Coulometry	161
10.1	Basic Principle of Coulometric Method of Chemical Analysis	161
10.2	Types of Coulometric Methods	163
10.3	Coulometric Titrations	167
10.4	Applications of Coulometric Titrations	169
10.5	Advantages of Coulometric Titrations	172
11	Conductometric Methods	175
11.1	Introduction	175
11.2	Important Principles of Conductometric Methods	175
11.3	Measurement of Conductance	177
11.4	Applications of Conductance Measurements	179
11.5	Types of Conductometric Titrations	182
11.6	Advantages and Disadvantages of Conductometric Titrations	189
11.7	High-Frequency Titration	189
12	Solvent Extraction	193
12.1	Basic Principle and Classification	193
12.2	Sequence and Mechanism of Extraction	195
12.3	Methods of Solvent Extraction	197
12.4	Extraction by Solvation	201
12.5	Applications of Solvent Extraction	202
13	Chromatography	205
13.1	Introduction to Chromatography	205
13.2	Classification of Chromatographic Methods	206
13.3	Chromatographic Theory	208
13.4	Factors Affecting Chromatographic Separations	213

13.5	Applications of Chromatography to Qualitative and Quantitative Analysis	214
13.6	Paper Chromatography	215
13.7	Theoretical Aspect of Paper Chromatography	215
13.8	Experimental Measures for Qualitative and Quantitative Analysis	219
13.9	Visualising the Chromatogram	221
13.10	Uses and Applications of Paper Chromatography	221
14	Thin Layer Chromatography	223
14.1	Basics of Thin Layer Chromatography	223
14.2	TLC Procedure	225
14.3	Qualitative and Quantitative Evaluation	228
14.4	High Performance Thin Layer Chromatography (HPTLC)	229
14.5	Applications of Thin Layer Chromatography (TLC)	230
15	Column Chromatography	235
15.1	Principle of Column Chromatography	235
15.2	Experimental Methods	236
15.3	Factors Governing Column Chromatography	239
15.4	Applications of Column Chromatography	241
16	Gas Chromatography	243
16.1	Principles of Gas Chromatographic Method of Separation	244
16.2	Instrumentation	248
16.3	The GC Chromatogram and Its Evaluation	255
16.4	Retention Index	257
16.5	Factors Affecting Separation in Gas Chromatography	257
16.6	Applications of Gas Chromatography	260
17	High Performance Liquid Chromatography	263
17.1	Principles Involved in HPLC	264
17.2	Components of HPLC	265
17.3	Principle of Reversed Phase Chromatography	271
17.4	Instrumentation	272
17.5	Applications of HPLC	279
18	Ion Exchange Chromatography	283
18.1	Basic Principles of Ion Exchange Chromatography	284
18.2	Cation Exchangers	288
18.3	Anion Exchangers	290
18.4	Ion Exchange Equilibria	291
18.5	Factors Affecting Ion Exchange Equilibria	294
18.6	Experimental Conditions	295
18.7	Applications of Ion Exchange Chromatography (IEC)	296

19	Exclusion Chromatography	301
19.1	Principle	302
19.2	Mechanism of Size Exclusion Chromatography	304
19.3	Column Dimensions and Column Packings	306
19.4	Instrumentation	307
19.5	Application of Size Exclusion Chromatography	308
19.6	Advantages and Disadvantages of Size Exclusion Chromatography	308
20	Electrophoresis	311
20.1	Introduction	311
20.2	Types of Electrophoresis	312
20.3	General Principles	314
20.4	Factors Affecting Electrophoresis	316
20.5	Isoelectric Focussing	317
20.6	Applications of Electrophoresis	319
21	Role of Computers in Instrumental Methods of Analysis	321
21.1	Introduction	321
21.2	Role of Computers in Instrumentation	323
21.3	Computer Basics	324
21.4	Interfacing Instruments with Computers	326
21.5	Advantages of Microprocessors in Analytical Instruments	330
	National Ambient Air Quality Standards (NAAQS)	333
	Index	337
