

# Brief Contents

Chapter 1	Matter, Energy, and Measurement	102
Chapter 2	Atomic Structure and Radioisotopes	143
Chapter 3	Ionic and Covalent Compounds	185
Chapter 4	Molecular Geometry, Polarity, and Intermolecular Forces of Attraction	119
Chapter 5	Chemical Quantities and Introduction to Chemical Reactions	153
Chapter 6	Chemical Reactions: Energy, Rates, and Equilibrium	185
Chapter 7	Changes of State and the Gas Laws	215
Chapter 8	Mixtures, Solution Concentrations, Osmosis, and Dialysis	253
Chapter 9	Acids and Bases, pH, and Buffers	299
Chapter 10	Introduction to Organic Chemistry: Hydrocarbon Structure	341
Chapter 11	Alcohols, Phenols, Thiols, Ethers, and Amines	397
Chapter 12	The Common Carbonyl-Containing Functional Groups	439
Chapter 13	Common Organic Reactions in Biochemistry	479
Chapter 14	Carbohydrates: Structure and Function	523
Chapter 15	Lipids: Structure and Function	567
Chapter 16	Proteins: Structure and Function	599
Chapter 17	Nucleotides and Nucleic Acids	643
Chapter 18	Energy and Metabolism	681
Appendix A	Basic Math Review with Guidance for Using a TI-30Xa Scientific Calculator	A-1
Appendix B	Answers to Odd-Numbered Additional Exercises	B-1
	Glossary/Index	G/I-1

# Contents

Preface	xv
<b>Chapter 1   Matter, Energy, and Measurement</b>	<b>1</b>
<u>Concepts in Context: Osteoporosis and Measurement of Bone Density</u>	1
1.1 Matter and Energy	2
Kinetic and Potential Energy	3
1.2 Units and Measurement	6
Systems of Measurement	7
Units of Length, Mass, and Volume	9
1.3 Significant Figures in Measurements and Calculations	13
Significant Figures in a Measurement	13
Exact Numbers	15
Significant Figures in Calculations	17
1.4 Dimensional Analysis	18
Using Dimensional Analysis in Metric-Metric Unit Conversions	19
English-Metric Conversions	24
Density Calculations	25
Dosage Calculations	28
1.5 Temperature Scales and Conversions	31
The Temperature Scales	31
Temperature Conversions	32
<u>Chemistry in Medicine: Matter, Energy, and Starvation</u>	34
<b>Chapter 2   Atomic Structure and Radioisotopes</b>	<b>43</b>
<u>Concepts in Context: The Micronutrients and Nutrition</u>	43
2.1 Elements and the Structure of the Atom	45
The Structure of the Atom	46
Elements and the Periodic Table	46
Isotopes of an Element	49
Average Atomic Mass	51
2.2 Navigating the Periodic Table of the Elements	52
Groups and Periods	52
Metals, Nonmetals, and Metalloids	53
Important Elements in Biochemistry and Medicine	54
2.3 Electron Arrangement and Valence Electrons	56
Energy Levels and the Arrangement of Electrons	56
Valence Electrons and Periodicity	58
2.4 Radioisotopes: $\alpha$ Decay and $\beta$ Decay	61
$\alpha$ decay	61
$\beta$ decay	63
Half-Life	64
2.5 High-Energy Electromagnetic Radiation	67
Electromagnetic Radiation	67
Radioisotopes that Emit Gamma Rays	68
2.6 The Penetrating Power and Biological Effects of Radiation	70
Penetrating Power of Radiation	70
Radiation Sickness	71
<u>Chemistry in Medicine: Electromagnetic Radiation in Medical Imaging</u>	73
<b>Chapter 3   Ionic and Covalent Compounds</b>	<b>85</b>
<u>Concepts in Context: What Is in Your Morning Coffee?</u>	85
3.1 Ionic Compounds Containing Monatomic Ions	86
Monatomic Cations and Anions	88
Writing the Formula Unit for an Ionic Compound	93
Writing the Name of an Ionic Compound from Its Formula Unit	94
3.2 Ionic Compounds Containing Polyatomic Ions	96
3.3 Covalent Compounds	99
The Covalent Bond	99
The Molecular Formula of a Covalent Compound	100
Naming Simple Binary Covalent Compounds	100

<b>3.4</b> Writing Lewis Dot Structures of Covalent Compounds	102	<b>5.2</b> Writing and Balancing Chemical Equations	161
The Process for Writing Lewis Dot Structures	102	The Law of Conservation of Mass	162
<b>Extension Topic 3-1: Expanded Octets</b>	109	Writing a Chemical Equation	162
<b>Chemistry in Medicine:</b> Blood Chemistry and the Diagnosis of Disease	110	Balancing a Chemical Equation	164
<b>Chapter 4   Molecular Geometry, Polarity, and Intermolecular Forces of Attraction</b>	119	Mole-to-Mole Stoichiometry Calculations	167
<b>Concepts in Context: The Role of Estrogens in Breast Cancer</b>	119	<b>Extension Topic 5-1: Mass-to-Mass Stoichiometry Calculations</b>	169
<b>4.1</b> Three-Dimensional Shapes of Molecules	120	<b>5.3</b> Types of Chemical Reactions	171
Molecular Models	120	Combination Reactions	171
Predicting Electron Geometry and Molecular Geometry	121	Decomposition Reactions	172
Molecular Geometries of the Atom Centers in Larger Molecules	126	Single Replacement Reactions	172
<b>4.2</b> Bond Dipoles and Molecular Polarity	127	Double Replacement Reactions	172
Electronegativity	128	Oxidation-Reduction Reactions	173
Bond Dipoles	129	<b>Chemistry in Medicine:</b> Antacids and the Chemical Reactions That Relieve Acid Indigestion	176
Nonpolar and Polar Molecules	132	<b>Chapter 6   Chemical Reactions: Energy, Rates, and Equilibrium</b>	185
<b>4.3</b> Intermolecular Forces of Attraction in a Compound	136	<b>Concepts in Context: Food and Energy</b>	185
Dispersion Forces	137	<b>6.1</b> Energy and Chemical Reactions	186
Dipole-Dipole Forces	138	Units of Energy: The Nutritional Calorie, Calorie (cal), and Joule (J)	187
Hydrogen Bonding Forces	138	Exothermic and Endothermic Reactions	188
<b>Chemistry in Medicine:</b> Designing Drugs to Treat Breast Cancer	142	The Calorie Content of Foods	192
<b>Chapter 5   Chemical Quantities and Introduction to Chemical Reactions</b>	153	An Overview of Energy and Metabolism in Cells	194
<b>Concepts in Context: A Chemical Reaction That Saves Lives</b>	153	<b>6.2</b> Rates of Chemical Reactions	195
<b>5.1</b> Counting and Weighing Matter: The Mole	155	Activation Energy, $E_A$	196
Molecular Mass and Formula Mass	155	Factors Affecting the Rate of a Reaction	198
The Mole and Avogadro's Number	157	<b>6.3</b> Chemical Equilibrium	201
The Mole and Molar Mass	158	Reversible Reactions and Equilibrium	201
Interconverting between Mass and Number of Particles	160	Le Châtelier's Principle	202
<b>Chemistry in Medicine:</b> The Human Calorimeter and Indirect Calorimetry	206	<b>Chemistry in Medicine:</b> The Human Calorimeter and Indirect Calorimetry	206
<b>Chapter 7   Changes of State and the Gas Laws</b>	215	<b>Concepts in Context: Diver Rescue and the Bends</b>	215
<b>7.1</b> Changes of State	216	Kinetic Energy versus Intermolecular Forces of Attraction	217
Energy Transfer and Changes of State	217	Melting and Boiling Points	218
Melting and Boiling Points	218	Specific Heat	223

<b>7.2 Properties of Gases and the Gas Laws</b>	225	<b>9.1 Acids and Bases</b>	300
Pressure	225	Acids Produce Hydronium Ions and Bases	
The Gas Laws	228	Produce Hydroxide Ions in Aqueous Solution	301
Molar Volume and the Volume-Mole Relationship	238	The Brønsted-Lowry Theory of Acids and Bases	302
		Strengths of Acids and Bases	306
<b>7.3 Gas Mixtures and Partial Pressures</b>	241	<b>9.2 pH</b>	314
Henry's Law	242	Physiological pH	314
<b>Chemistry in Medicine:</b> Hyperbaric Oxygen Therapy (HBOT)	244	$K_w$ and the Autoionization of Water	315
		Calculating Hydroxide or Hydronium Ion Concentrations Using the Ion-Product Constant for Water	315
		Calculating pH from the Hydronium Ion Concentration	318
<b>Chapter 8   Mixtures, Solution Concentrations, Osmosis, and Dialysis</b>	253	<b>9.3 Acid-Base Neutralization Reactions</b>	320
<b>Concepts in Context:</b> How the Kidneys Filter Our Blood	253	Neutralization Reactions with Hydroxide-Ion-Containing Bases	321
<b>8.1 Types of Mixtures</b>	255	Hydrogen Carbonate and Carbonate Ion as Bases	323
Homogeneous and Heterogeneous Mixtures	255		
<b>8.2 Solutions: Dissolving Covalent and Ionic Compounds in a Solvent</b>	259	<b>9.4 Buffers</b>	325
Solvation of Covalent Compounds	260	Components of a Buffer	325
Solvation of Ionic Compounds	263	The Buffer Equilibrium	325
<b>8.3 Solution Concentration</b>	266	The Carbonic Acid/Hydrogen Carbonate Blood Buffer	327
Preparing a Solution with a Given Concentration	267	<b>Chemistry in Medicine:</b> Acid-Base Homeostasis, Acidosis, and Alkalosis	330
Mass/Volume Concentration	268		
% Mass/Volume Concentration	270		
Molar Concentration	274		
<b>8.4 Solution Dosage Calculations in Medicine</b>	275	<b>Chapter 10   Introduction to Organic Chemistry: Hydrocarbon Structure</b>	341
Administering Solutions of Oral Medications	275	<b>Concepts in Context:</b> Good Fats . . . Bad Fats . . . What Does It All Mean?	341
IV Solutions and Flow Rate	276		
<b>8.5 Solution Dilution Calculations</b>	278	<b>10.1 Introduction to Organic Chemistry and Hydrocarbons</b>	343
<b>8.6 Osmosis and Dialysis</b>	280	What Is Organic Chemistry?	343
Diffusion and Crossing the Cell Membrane	281	Introduction to Hydrocarbons	343
Osmosis	283		
Dialysis	286	<b>10.2 Alkanes and Cycloalkanes</b>	345
<b>Chemistry in Medicine:</b> Hemodialysis—Performing the Function of the Kidneys	288	Conformations of Alkanes	346
		Structural Isomers	349
		Writing and Naming Straight-Chain Alkanes	352
		Writing and Naming Cycloalkanes	354
<b>Chapter 9   Acids and Bases, pH, and Buffers</b>	299	<b>10.3 Writing Condensed and Skeletal Line Structures of Alkanes and Cycloalkanes</b>	356
<b>Concepts in Context:</b> Metabolic Acidosis and Blood pH	299	Writing Condensed Structures	356
		Writing Skeletal Line Structures	359

<b>10.4 Alkenes and Alkynes</b>	364
Alkenes	364
Alkynes	370
<b>10.5 Aromatic Hydrocarbons</b>	372
Benzene	372
<b>10.6 Naming Substituted Hydrocarbons</b>	375
Naming Substituted Alkanes	375
Naming Substituted Cycloalkanes	376
Naming Substituted Alkenes and Alkynes	379
Naming Substituted Benzenes	380
Pharmaceuticals: IUPAC, Generic, and Brand Names	382
<b>Chemistry in Medicine: The Chemistry of Vision</b>	382
<b>Chapter 11   Alcohols, Phenols, Thiols, Ethers, and Amines</b>	397
<b>Concepts in Context: Opioids and Their Abuse</b>	397
<b>11.1 Introduction to Functional Groups in Organic Chemistry</b>	399
The Hydrocarbon Functional Groups	399
Writing Skeletal Line and Condensed Structures for Molecules with Carbon-Heteroatom Bonds	400
<b>11.2 Alcohols</b>	402
Naming Alcohols	404
Types of Alcohols	405
Diols, Triols, and Polyols in Nature and Industry	407
Physical Properties of Alcohols	408
<b>11.3 Phenols</b>	410
Phenols in Nature and Industry	410
Naming Phenols	411
<b>11.4 Thiols</b>	413
Naming Simple Thiols	413
Thiols in Nature and in Industry	414
<b>11.5 Ethers</b>	417
Ethers as Anesthetics and Pharmaceuticals	417
<b>11.6 Amines and Their Chemical Reactivity as Bases</b>	420
Types of Amines	421
Physical Properties of Amines	421
Physiological and Pharmacological Activity of Amines	423
Amines Are Weak Organic Bases	425
<b>Chemistry in Medicine: The Role of Dopamine in Schizophrenia</b>	428

## Chapter 12 | The Common Carbonyl-Containing Functional Groups

<b>Concepts in Context: Clean It with Soap!</b>	439
<b>12.1 Introduction to the Carbonyl-Containing Functional Groups</b>	440
<b>12.2 Aldehydes</b>	441
Aldehydes in Nature	442
Naming Aldehydes	443
<b>12.3 Ketones</b>	445
Ketones Found in Nature and in Pharmaceuticals	446
Naming Ketones	447
<b>12.4 Carboxylic Acids</b>	450
Identifying a Carboxylic Acid Functional Group	450
Carboxylic Acids and Carboxylate Ions	452
Carboxylic Acids in Nature and in Pharmaceuticals	452
Naming Carboxylic Acids	455
<b>12.5 Esters</b>	456
Identifying an Ester Functional Group	457
Esters in Nature and in Pharmaceuticals	458
IUPAC Rules for Naming Esters	461
<b>12.6 Amides</b>	462
Amides in Nature and in Pharmaceuticals	464
Naming Amides	466
<b>Chemistry in Medicine: L-Dopa, a Treatment for Parkinson's Disease</b>	468
<b>Chapter 13   Common Organic Reactions in Biochemistry</b>	479
<b>Concepts in Context: How Does the Body Handle Alcoholic Beverages?</b>	479
<b>13.1 Oxidation–Reduction Reactions</b>	481
Oxidation and Reduction Reactions of Organic Substrates	481
Oxidation and Reduction of Common Functional Groups	483
<b>13.2 Esterification, Thioesterification, and Amidation Reactions</b>	492
Formation of Esters and Thioesters	493
Amidation Reactions	498
<b>13.3 Hydrolysis Reactions</b>	500
Applications of Hydrolysis Reactions	504

<b>13.4 Hydration and Dehydration Reactions</b>	505
Hydration Reactions	506
Dehydration Reactions	507

**Chemistry in Medicine:** Are You Getting Your Vitamins? 510

## Chapter 14 | Carbohydrates: Structure and Function 523

<b>Concepts in Context:</b> Dental Caries and the Sweet Tooth	523
<b>14.1 An Overview of Carbohydrates and Their Function</b>	524
Types of Carbohydrates	525
<b>14.2 Stereoisomers</b>	526
Chirality	526
Enantiomers	528
<b>Extension Topic 14-1: Converting from a Skeletal Line Structure to a Fischer Projection</b>	531
Diastereomers: Stereoisomers with More Than One Chirality Center	534

<b>14.3 The Structures of the Common Monosaccharides</b>	537
The Chemical Structures of Monosaccharides	537
The Ring Forms of Monosaccharides	540

<b>14.4 The Structure of Complex Carbohydrates</b>	545
Disaccharides	545
Polysaccharides	549

<b>14.5 The Role of Oligosaccharides as Cell Markers</b>	552
--	-----

**Chemistry in Medicine:** Blood Glucose Levels and Diabetes 554

## Chapter 15 | Lipids: Structure and Function 567

<b>Concepts in Context:</b> Anabolic Steroids and Their Abuse by Professional Athletes	567
<b>15.1 Fatty Acids</b>	569
Types of Fatty Acids	570
Shapes and Physical Properties of Fatty Acids	570
The Delta and Omega Systems	571

<b>15.2 Triacylglycerols: Energy Storage Lipids</b>	573
Triacylglycerols as Energy Storage Molecules	573
The Chemical Structure of Triacylglycerols	574

<b>15.3 Membrane Lipids: Phospholipids and Glycolipids</b>	576
The Chemical Structure of Phospholipids and Glycolipids	576
The Cell Membrane	581

<b>15.4 Cholesterol, Steroids, and Lipoproteins</b>	583
Bile Salts	584
Steroid Hormones	584
Lipoproteins and Cholesterol	585

**Chemistry in Medicine:** Inflammation and the Eicosanoids 587

## Chapter 16 | Proteins: Structure and Function 599

<b>Concepts in Context:</b> Sickle Cell Anemia and the Effect of One Wrong Amino Acid	599
---	-----

<b>16.1 Amino Acids</b>	601
pH and Amino Acid Equilibria	602
Amino Acids and Their Side Chains	603
The Chirality of Amino Acids	607
Essential Amino Acids	609

<b>16.2 Peptides</b>	610
Peptide Bonds	610

<b>16.3 Protein Structure</b>	613
The Primary Structure of a Protein	614
The Secondary Structure of a Protein	615
The Tertiary Structure of a Protein	619
The Quaternary Structure of a Protein	621
The Four Levels of Protein Architecture Applied to Hemoglobin	622
Types of Proteins: Fibrous and Globular	623
Denaturation of a Protein	624

<b>16.4 Enzymes and Enzyme Inhibitors</b>	625
The Enzyme-Substrate Complex	625
pH and Temperature Dependence of Enzymes	626
Enzyme Inhibitors	627

**Chemistry in Medicine:** ACE Inhibitors, a Treatment for High Blood Pressure 629

<b>Chapter 17   Nucleotides and Nucleic Acids</b>	<b>643</b>	<b>18.2 Carbohydrate Catabolism: Glycolysis and Pyruvate Metabolism</b>	<b>688</b>
<b>Concepts in Context: Gene Mutations and Disease</b>	<b>643</b>	Glycolysis	688
<b>17.1 The Chemical Structure of Nucleotides and Polynucleotides</b>	<b>645</b>	The Metabolism of Pyruvate	690
The Monosaccharide	645		
The Nitrogenous Base	646		
The Monophosphate Ester	647		
Constructing Polynucleotides from Nucleotides	650		
<b>17.2 DNA Structure and Replication</b>	<b>653</b>	<b>18.3 The Citric Acid Cycle</b>	<b>692</b>
Double Helix Structure of DNA	653	An Overview of the Citric Acid Cycle	692
Genes, Chromosomes, and the Human Genome	655	A Closer Look at the Steps of the Citric Acid Cycle	694
DNA Replication	658		
<b>17.3 The Role of DNA and RNA in Protein Synthesis</b>	<b>661</b>	<b>18.4 The Electron Transport Chain and Oxidative Phosphorylation</b>	<b>695</b>
Transcription: DNA to mRNA	662	Where It All Happens: The Mitochondria	695
Translation	663	The Electron Transport Chain and the Proton Motive Force	696
Genetic Mutations	668	Oxidative Phosphorylation: Harnessing the Potential Energy of the Proton Motive Force	700
<b>Chemistry in Medicine: The Retrovirus HIV and Its Life Cycle in a T-lymphocyte</b>	<b>669</b>	Net ATP Production from the Complete Oxidation of Glucose	701
<b>Chapter 18   Energy and Metabolism</b>	<b>681</b>	<b>18.5 <math>\beta</math>-Oxidation of Fatty Acids</b>	<b>702</b>
<b>Concepts in Context: Exercise and Weight Loss</b>	<b>681</b>	Activation of a Fatty Acid to Fatty Acyl-CoA	702
<b>18.1 Energy and Metabolism: An Overview</b>	<b>682</b>	$\beta$ -Oxidation	702
		<b>Chemistry in Medicine: Inhibitors of the Electron Transport Chain</b>	<b>705</b>
		<b>Appendix A: Basic Math Review with Guidance for Using a TI-30Xa Scientific Calculator</b>	<b>A-1</b>
		<b>Appendix B: Answers to Odd-Numbered Additional Exercises</b>	<b>B-1</b>
		<b>Glossary/Index</b>	<b>G/I-1</b>

Provides independent practice with *In Achieve*, Cengage's third edition of *Essentials of General, Organic, and Biochemistry*. It ensures students successfully learn chemistry by reinforcing core concepts, math skills, and problem-solving techniques. Bolstering students' abilities in these areas builds confidence and provides the necessary foundation they need to succeed throughout the course.
