
OBSAH

1. Introduction to microscopy (Ľuboš Danišovič)	12
1.2 Types of microscopes	13
1.2.1 Stereomicroscope	14
1.2.2 Inverted microscope	14
1.2.3 Fluorescence microscope	14
1.2.4 Confocal microscope	14
1.2.5 Polarized microscope	14
1.3 Construction of light microscope	15
1.4 Recommended procedure for microscopic observation	17
1.4.1 Orientation in the microscopic view	18
1.4.2 The most common errors and causes in microscopy	18
1.5 Types of slide preparations	19
2. The cell (Ľuboš Danišovič, Daniel Böhmer)	20
2.1 Prokaryotic cell	21
2.2 Eukaryotic cell	23
2.2.1 Shape and size of cells	23
2.2.2 Molecular structure of cell membranes	24
2.2.2.1 Intercellular junctions	27
2.2.2.2 Membrane receptors	28
2.2.2.3 Transport of substances through the membrane	29
2.2.2.4 Endocytosis and exocytosis	31
2.2.3 Intracellular communication	32
2.3 Cell organelles	33
2.3.1 Nucleus	34
2.3.1.1 Nuclear envelope	34
2.3.1.2 Nuclear matrix	35
2.3.1.3 Chromatin	36
2.3.1.4 Nucleolus	36
2.3.2 Mitochondria	37
2.3.3 Chloroplasts	38
2.3.4 Endoplasmic reticulum	38
2.3.5 Golgi apparatus	39
2.3.6 Lysosomes and other vesicles	39
2.3.7 Cytoskeleton	40
2.3.8 Centrosome	41
2.3.9 Ribosomes	41

3. Reproduction of cells (Daniel Böhmer, Ľuboš Danišovič).....	44
3.1 Cell cycle of eukaryotic cells	44
4. Cell and tissue cultures (Ľuboš Danišovič)	50
4.1 Brief history of cell and tissue cultures	50
4.2 Biology of cultivated cells.....	51
4.2.1 Conditions for cultivation of cells <i>in vitro</i>	53
4.2.2 Phases of cell cultures	54
4.3 Types of cell cultures	55
4.4 Utilization of cell and tissue cultures	55
5. Relationship between microorganism and macroorganism (Daniel Böhmer)	58
5.1 Bacteria	59
5.2 Parasitic protozoa.....	61
5.2.1 Protozoa parasitizing in cavities.....	62
5.2.2 Protozoa parasitizing in intestine	63
5.2.3 Blood and tissue parasitic protozoa	64
6. Nucleic Acids (Vanda Repiská).....	68
6.1 Nucleic acids and their function.....	68
6.2 Primary structure of nucleic acids	69
6.3 Secondary and tertiary structure of the nucleic acids	70
6.3.1 Secondary and tertiary structure of DNA	70
6.3.2 Types of DNA.....	73
6.3.2.1 Chromosomal DNA.....	73
6.3.2.2 Mitochondrial DNA (mtDNA).....	74
6.3.2.3 Plasmids.....	77
6.4.1 Secondary and tertiary structure of RNA.....	78
6.4.1.1 Messenger RNA	78
6.4.1.2 Ribosomal RNA	78
6.4.1.3 Transfer RNA	80
6.4.1.4 Non-coding RNA.....	82
7. Replication (Vanda Repiská)	84
8. Protein synthesis (Vanda Repiská).....	92
8.1 Gene	92
8.2 The central dogma of molecular biology	94
8.3 Transcription	95
8.3.1 Post-transcriptional modification of RNA	98
8.4 Genetic code	100

8.5	Translation	102
8.5.1	Amino acid activation and its binding to tRNA.....	103
8.5.2	The formation of the initiation complex	104
8.5.3	The lengthening of the peptide chain – elongation.....	105
8.5.4	The termination of the synthesis of the polypeptide.....	105
8.5.5	Posttranslational modifications of the proteins.....	106
8.6	The mechanism of the effect of antibiotics on protein synthesis in bacteria ..	106
9.	Laboratory methods in molecular genetics (Vanda Repiská).....	108
9.1	Obtaining of biological material (samples) for DNA analysis	108
9.2	Processing of biological material	109
9.3	Methods of the isolation of the nucleic acids.....	110
9.4	Gel electrophoresis	111
9.5	Restriction endonucleases	113
9.6.	Principles of DNA polymorphism and DNA-DNA hybridization	115
9.6.1	Restriction Fragment Length Polymorphism (RFLP).....	116
9.7	Polymerase Chain Reaction (PCR)	118
9.7.1.	Quantitative PCR.....	124
9.7.2	Methylation-specific PCR	125
9.7.3	MLPA.....	125
9.8	DNA sequencing.....	126
9.9	Biochips	129
10.	Introduction to the genetics of viruses (Daniel Böhmer).....	132
10.1	Types of virus reproduction.....	133
10.1.1	Lytic cycle.....	134
10.1.2	Lysogenic cycle	134
10.2	Classification of Viruses	135
10.2.1	Classification of viruses according to genome	135
10.2.1.1	RNA viruses.....	136
10.2.1.1.1	Viruses with double stranded RNA (dsRNA-viruses).....	136
10.2.1.1.2	Viruses with positive single stranded RNA (+ssRNA viruses)	136
10.2.1.1.3	Viruses with negative single stranded RNA (-ssRNA viruses)	136
10.2.1.1.4	RNA Retroviruses	137
10.2.1.2	DNA viruses	138
10.2.1.2.1	Viruses with a double stranded DNA (dsDNA viruses).....	138
10.2.1.2.2	Viruses with a single stranded DNA (ssDNA viruses)	138

10.2.1.2.3	DNA retroviruses.....	139
10.3	Mutations and recombinations of viruses	139
11.	Human Genome (Vanda Repiská).....	142
11.1	History of the “Human Genome” project	142
11.2	Objectives of “Human Genome” project	145
11.3	Results of “Human Genome” project.....	145
11.4	Ethical problems of “Human Genome” project.....	149
12.	Basic methods of human genetics (Vanda Repiská, Daniela Klimová)	152
12.1	Gemellological method (survey of twins).....	152
12.2	Genealogical method	153
12.3	Population genetics.....	155
12.4	Cytogenetics and its analysis.....	158
12.4.1	Classical cytogenetics.....	158
12.4.1.1	Cytogenetics analysis methods in mitosis	158
12.4.1.2	Interphase cytogenetics analysis	163
12.4.2	Molecular cytogenetics	165
12.4.2.1	Types of probes for FISH.....	166
12.4.2.2	FISH Modifications	167
13.	Monogenic normal and pathological traits, autosomal inherited (Vanda Repiská, Daniela Klimová).....	170
13.1	Basic terms used in monogenic inheritance	170
13.2	Autosomal dominant inheritance	173
13.2.1	Normal autosomal dominant hereditary traits	173
13.2.2	Autosomal dominant inheritance of diseases and pathological features.....	175
13.2.2.1	Examples of diseases with the autosomal dominant type of inheritance	176
13.2.2.1.1	Huntington’s chorea.....	176
13.2.2.1.2	Neurofibromatosis type 1	177
13.2.2.1.3	Neurofibromatosis type 2.....	177
13.2.2.1.4	Achondroplasia (Chondrodystrophy)	177
13.3	Autosomal recessive inheritance of pathological signs and diseases.....	178
13.3.1	Examples of diseases with autosomal recessive inheritance type... ..	178
13.3.1.1	Alkaptonuria.....	179
13.3.1.2	Cystic fibrosis	180
13.3.1.3	Phenylketonuria.....	180
14.	Normal and pathological X-linked monogenic conditioned traits (Vanda Repiská, Daniela Klimová).....	180

14.1	Pathological traits (diseases) with X-linked dominant type of inheritance	183
14.1.1	Examples of diseases with X-linked gonosome-dominant type of inheritance	183
14.1.1.1	Vitamin D-resistant hypophosphatemic rickets	183
14.1.1.2	Rett syndrome.....	184
14.2	Pathological traits and diseases with X-linked recessive type inheritance..	184
14.2.1	Examples of diseases with X-linked recessive type inheritance	185
14.2.1.1	Hemophilia A.....	185
14.2.1.2	Hemophilia B	186
14.2.1.3	Duchenne muscular dystrophy.....	186
14.2.1.4	Becker muscular dystrophy.....	187
14.2.1.5	Daltonism	187
14.2.1.6	Adrenoleukodystrophy.....	187
14.2.1.7	Fabry disease	188
15.	Multifactorial inheritance (Daniel Böhmer, Daniela Klimová)	190
15.1	Quantitative traits with multifactorial type of inheritance	191
15.2	Heritability	192
15.3	Qualitative traits with a multifactorial type of inheritance	192
15.4	Inborn defects with multifactorial type of inheritance.....	194
15.4.1	Cleft lips and palate	195
15.4.2	Neural tube defect.....	197
15.4.3	Pylorostenosis.....	199
15.4.4	Pes equinovarus	200
15.4.5	Congenital heart defects	201
16.	Mutagenesis and testing of potential mutagens (Vanda Repiská).....	204
16.1	Mutagenesis	206
16.2	Classification of mutations	207
16.3	Role of mutagenesis in discovering the gene function	212
16.4	Potential mutagens testing	213
17.	Gametogenesis (Daniel Böhmer, Daniela Klimová)	216
17.1	Meiosis.....	217
17.1.1	Meiosis disorders.....	220
17.1.2	Comparison of the process of mitosis and meiosis.....	221
17.1.3	Spermatogenesis	222
17.3	Oogenesis.....	223
18.	Chromosomal aberrations (Daniela Klimová)	228
18.1	Numerical chromosomal aberrations	228

18.1.1	Polyploidy.....	229
18.1.2	Aneuploidy	229
18.1.2.1	The most common numerical aberrations of autosomes....	231
18.1.2.2	Numerical aberrations of gonosomes	234
18.2	Structural chromosomal aberrations.....	235
19.	Reparation mechanisms and syndromes with spontaneous instability of chromosomes (Vanda Repiská)	244
19.1	DNA reparation.....	244
19.1.1	DNA repair during and immediately after replication	245
19.1.2	DNA repair outside the replication period and repair mechanisms....	246
19.1.2.1	Direct damage repair – photoreactivation.....	247
19.1.2.2	Excision repair.....	248
19.1.2.3	Tolerance of DNA damage – SOS repair.....	248
19.2	Syndromes with spontaneous instability of chromosomes.....	249
19.2.1	Xeroderma pigmentosum	249
19.2.2	Fanconi anemia.....	250
19.2.3	Bloom syndrome	250
19.2.4	Ataxia telangiectasia (Henner-Louis-Bar syndrome)	250
19.2.5	Cockayne syndrome	251
20.	Regulation and deregulation of a cell cycle (Daniel Böhmer).....	252
20.1	Principles of cell cycle regulation	252
20.2	Course and check points of cell cycle	259
20.2.1	Check points of cell cycle phases	261
20.3	Protooncogenes and tumor suppressor genes – their role in regulation and deregulation of the cell cycle	267
20.3.1	Tumor suppressor genes.....	267
20.3.2	Protooncogenes.....	271
21.	Introduction to genetics of development (Daniel Böhmer)	280
21.1	Stages of intrauterine development.....	280
22.	Introduction to experimental teratology (Daniel Böhmer)	288
23.	Apoptosis (Daniel Böhmer).....	294
24.	Gene therapy (Vanda Repiská).....	298
24.1	Diseases treated by gene therapy.....	298
24.2	Basic requirements for successful gene therapy	301
24.3	Basic methods of gene therapy.....	302
24.4	Advantages and limitations of gene therapy	303
