Preface to second edition	xiii
Preface to first edition	xv
CHAPTER 1 Historical context	1
1.1 Background	2
1.2 Vannevar Bush's "As We May Think" (1945)	3
1.3 Ivan Sutherland's Sketchpad (1962)	5
1.4 Invention of the Mouse (1963)	6
1.5 Xerox Star (1981)	11
1.6 Birth of HCI – 1983	15
1.6.1 First ACM SIGCHI Conference (1983)	15
1.6.2 The Psychology of Human-Computer Interaction (1983)	17
1.6.3 Launch of the Apple Macintosh (1984, January)	22
1.7 Growth of HCI and graphical user interfaces	24
1.8 Empirical research in HCI	25
1.8.1 Conferences – the backbone of HCI	26
1.9 Other readings	28
1.10 Resources	28
Student exercises	29
CHAPTER 2 The human factor	31
2.1 Time scale of human action	32
2.2 Human factors	33
2.3 Sensors	34
2.3.1 Visual (seeing)	34
2.3.2 Auditory (hearing)	37
2.3.3 Tactile (touch)	41
2.3.4 Olfactory (smell) and gustatory (taste)	42
2.3.5 Other senses	43
2.4 The brain	43
2.4.1 Perception	43
2.4.2 Cognition	46
2.4.3 Memory	48
2.5 Responders	50
2.5.1 Limbs	50
2.5.2 Voice	55
2.5.3 The eye as a responder	56
2.5.4 The brain as a responder	59
2.6 Language	59

2.6.1	Redundancy in language	61
2.6.2	Entropy in language	63
2.6.3	Language modelling for text creation	64
2.7	Human performance	65
2.7.1	Reaction time	66
2.7.2	Visual search	70
2.7.3	Skilled behaviour	72
2.7.4	Attention	75
2.7.5	Human error	76
2.7.6	Outliers	83
2.7.7	Accidents	85
	Student exercises	85
CHAPTER 3	Interaction elements	93
3.1	Techniques	94
3.1.1	Pointing	95
3.1.2	Selecting	96
3.1.3	Point-select improvements	96
3.1.4	Alternate inputs	99
3.1.5	Single-switch scanning	103
3.1.6	Gesture input	108
3.2	Hard controls and soft controls	110
3.3	Control-display relationships	112
3.3.1	Spatial relationships	113
3.3.2	CD gain and transfer function	118
3.3.3	Latency	120
3.3.4	Property sensed and order of control	122
3.4	Mental models and metaphor	125
3.5	Modes	130
3.5.1	Mode switching	132
3.5.2	Feedback and mode errors	133
3.5.3	Graphics and 3D	135
3.6	More about degrees of freedom	140
3.7	Mobile context	144
3.8	Interaction errors	147
3.8.1	Lost information	148
3.8.2	Caps_Lock error	149
3.8.3	Hyper-scrolling	149
3.8.4	Focus uncertainty	151
3.8.5	Little errors linger	152
	Student exercises	155
CHAPTER 4	Scientific foundations	161
4.1	What is research?	161
4.1.1	Research must be published	163

4.1.2	Citations, references, impact	164
4.1.3	Research must be replicable	166
4.1.4	Research vs. engineering vs. design	167
4.1.5	The nature of research	169
4.2	What is empirical research?	171
4.3	Research methods	172
4.3.1	Observational method	172
4.3.2	Experimental method	173
4.3.3	Correlational method	174
4.3.4	Precision and relevance in experimental methodology	175
4.3.5	User study vs. usability evaluation	176
4.4	Observe and measure	177
4.4.1	Observation	177
4.4.2	Measurement scales	178
4.5	Research questions	183
4.6	Internal validity and external validity	185
4.7	Comparative evaluations	188
4.8	Relationships: causal and circumstantial	190
4.9	Research topics	192
4.9.1	Ideas	193
4.9.2	Finding a topic	195
	Student exercises	199
CHAPTER 5	Designing HCI experiments	203
5.1	What methodology?	204
5.2	Ethics approval	205
5.3	Experiment design	206
5.4	Independent variables	207
5.5	Dependent variables	210
5.6	Other variables	213
5.6.1	Control variables	213
5.6.2	Random variables	214
5.6.3	Confounding variables	214
5.7	Task and procedure	217
5.8	Participants	219
5.9	Questionnaire design	221
5.9.1	Demographics and experience	221
5.9.2	Participant opinions	223
5.10	Within-subjects, between-subjects	226
5.11	Order effects, counterbalancing, and Latin squares	228
5.12	Group effects and asymmetric skill transfer	233
5.13	Longitudinal studies	237
5.14	Running the experiment	240
	Student exercises	241

CHAPTER 6	Hypothesis testing	243
6.1	Utility software: GoStats	245
6.2	Analysis of variance	245
6.2.1	Why analyse the variance?	246
6.2.2	Non-significant ANOVA results	251
6.2.3	More than two test conditions	253
6.2.4	Post hoc comparisons	253
6.2.5	Between-subjects designs	255
6.2.6	Two-way analysis of variance	257
6.2.7	Doing an ANOVA with GoStats	260
6.2.8	Testing for a group effect	262
6.3	Chi-square test	264
6.3.1	Example 1	264
6.3.2	Chi-square calculations	265
6.3.3	Chi-square in GoStats	266
6.3.4	Example 2	267
6.3.5	Example 3	268
6.4	Lilliefors test for normality	269
6.4.1	Example 1	270
6.4.2	Example 2	271
6.4.3	Example 3	272
6.5	Non-parametric tests for ordinal data	274
6.5.1	Mann-Whitney U test	275
6.5.2	Wilcoxon Signed-Ranks test	276
6.5.3	Kruskal-Wallis test	278
6.5.4	Friedman test	279
6.6	Discussion	281
6.7	Parametric vs. non-parametric tests	282
	Student exercises	285
CHAPTER 7	Modelling interaction	293
7.1	Descriptive models	293
7.1.1	Delineating a problem space	294
7.1.2	Quadrant model of groupware	295
7.1.3	Key-action model (KAM)	296
7.1.4	Bimanual control model	299
7.1.5	Circumplex model of affect	303
7.1.6	Three-state model of graphical input	305
7.2	Predictive models	308
7.2.1	Linear regression model	309
7.2.2	Fitts' law	312
7.2.3	Choice reaction time	319
7.2.4	The keystroke-level model	322
7.2.5	Skill acquisition	339
7.2.6	More than one predictor	343

7.3	A model continuum model	347
	Student exercises	348
CHAPTER 8	Writing and publishing a research paper	361
8.1	Conference papers, journal papers	361
8.2	Parts of a research paper	362
8.2.1	Title	363
8.2.2	Abstract	364
8.2.3	Keywords	366
8.2.4	Introduction	366
8.2.5	Method	367
8.2.6	Results and discussion	370
8.2.7	Conclusion	373
8.2.8	References	373
8.3	Preparing the manuscript	373
8.3.1	Environment	374
8.3.2	Formatting	375
8.3.3	Citations and references	376
8.3.4	Visual aids	379
8.3.5	Writing for clarity	382
	Student exercises	385
	Bibliography	391
	Glossary	431
	Index	437
