Preface to the fourth edition	page ix
1 Start with a plan	1
Ask fundamental questions first	1
Communication format: the message determines the medium	3
So, where <i>should</i> this paper be published?	8
2 Conduct a comprehensive literature search	14
Adapt to new ways	15
Search many information channels	20
Keep track of your resources	25
3 Prepare for the challenge	28
Take charge of the task	28
Manage your message	31
Work with (and around) your natural inclinations	34
Build momentum and keep it	37
4 Begin well	41
Assess whether your research is ready for publication	41
Deal early with authorship	42
Master the practical mechanics of writing	46
5 Compose the IMRAD core of a strong first draft	55
Tackle the Introduction	55
Write your recipe: Materials, Methods, and variants	60
Marshal your results	62
Develop the Discussion and Conclusions	65
6 Assemble the rest of the first draft	68
Compile a careful and complete reference list	68
Generate a title and other front matter	71
Develop a suitable Abstract or Summary	75

Identify effectual keywords	76
Acknowledge the help of others	78
Be transparent about potential conflicts	79
7 Compile tables to develop, clarify, and support your story	81
Use tables appropriately	81
Revise tables thoughtfully	83
Watch the details	88
Mesh your graphics with your text	89
8 Include figures for evidence, efficiency, or emphasis	92
Match figure to function	93
Prepare simple, honest figures	94
Illustrate relationships with graphs	96
Document with photographs and other illustrations	100
Develop explanatory artwork when needed	102
Employ symbols and notations with care	103
Highlight your story with effective figure legends	104
9 Report numbers clearly and responsibly	106
Determine how to express numbers in the text	106
Handle percentages properly	113
Report statistics correctly	114
Present probabilities clearly and fairly	119
10 Revise for coherence	123
Start with organization and logic	123
Rework for clarity of style	125
Improve readability	128
Condense for brevity	131
Recognize when short might be too short	136
11 Improve style and syntax	141
Use verb tense rules to show the status of work	143
Know when to use active and passive voice	145
Check for subject–verb agreement	147

Attend to the mischief of multiples	148
Watch for strange linkages	152
12. Improve word choice	155
Recognize and minimize jargon	155
Use bias-free, inclusive language	159
Choose the right word	162
Energize the verbs	167
13 Attend to punctuation, capitalization, and other mechanics	170
Punctuate for clarity	170
Capitalize consistently	177
Treat scientific names properly	180
Be careful with other non-English words and phrases	184
14 Address your ethical and legal responsibilities	187
Value ethical concerns	187
Ensure against plagiarism	189
Adhere to guidelines for human and animal research	192
Protect yourself from potential libel and slander charges	193
Handle trade names responsibly	193
Understand copyright and patents	196
Know when and how to request permissions	199
Verify that you have addressed all potential concerns	203
15 Oral presentations: adapt the text and visuals	204
Choose your design tools	204
Investigate electronic alternatives	206
Present text effectively	208
Adapt and simplify the supporting graphics	212
Employ an effective slide presentation style	215
16 Share your story in public: presenting talks and posters	221
The human factor	221
Murphy was an optimist	225

	Deliver a successful speech or presentation	225
	Present a poster, the happy hybrid	230
	Handle questions with respect and assurance	234
17	Publication: the rest of the story	236
	Get it all together – then send it off!	236
	Understand the process of editorial review	241
	Tips for international publication	246
	Thirty exercises to improve anyone's scientific writing skills	251
	Selected resources	283
	Index	291
