Chapter 1	Thermodynamic Measurements: Potentiometry, UV/Vis Spectrometry and Calorimetry	1
	<i>Ryo Kanzaki</i>	
1.1	Introduction	1
1.2	Formation Distribution of Metal Complexes	2
1.2.1	Complexation Equilibria	2
1.2.2	Determination of Complexes Formed	4
1.3	Potentiometric Titration	5
1.3.1	Electrodes and Cells	5
1.3.2	Determination of Stability Constants	6
1.3.3	Complexation and Acid Dissociation	7
1.4	UV/Vis Spectrometry	9
1.4.1	Measurements	9
1.4.2	Determination of Stability Constants and Individual Spectra	10
1.4.3	Coordination Structure	12
1.5	Calorimetric Titration	13
1.5.1	Calorimeter	13
1.5.2	Determination of Reaction Enthalpies	14
1.5.3	Thermodynamic Quantities of Complexation	16
	References	18
Chapter 2	X-ray and Neutron Scattering	20
	<i>Toshio Yamaguchi</i>	
2.1	Introduction	20

Coordination Chemistry Fundamentals Series No. 2

Metal Ions and Complexes in Solution

Edited by Toshio Yamaguchi and Ingmar Persson

© Japan Society of Coordination Chemistry 2024

Published by the Royal Society of Chemistry, www.rsc.org

2.2	Theory of X-ray and Neutron Scattering of Solutions	21
2.3	Experimental Set-up and Data Treatment	24
2.3.1	X-ray Scattering of Solutions	24
2.3.2	Neutron Scattering of Solutions	26
2.4	Methods of Structure Analysis	29
2.4.1	Radial Distribution Function Method	29
2.4.2	Isomorphous Substitution Method	29
2.4.3	Isotopic Substitution Method	32
2.4.4	EPSR Modeling Method	34
	References	38
Chapter 3	X-ray Absorption Spectroscopy	40
	<i>Ingmar Persson</i>	
3.1	Introduction	40
3.2	Theory of EXAFS	41
3.3	Experimental Set-up	41
3.4	Data Collection	42
3.5	EXAFS Data Treatment	43
3.6	Usability of EXAFS	47
	References	48
Chapter 4	Nuclear Magnetic Resonance	49
	<i>Tatsuya Umecky</i>	
4.1	Introduction	49
4.2	One-dimensional Spectra	50
4.3	Relaxation Times	52
4.4	Self-diffusion Coefficients	54
4.5	Two-dimensional Spectra	56
	Abbreviations	59
	Acknowledgements	60
	References	60
Chapter 5	Vibrational Spectroscopy	62
	<i>Hajime Torii</i>	
5.1	General	62
5.2	Mechanism of Frequency Shifts – The Simplest Cases and Beyond	63
5.3	More Specific Example Cases	65
5.4	Noncoincidence Effect of Polarized Raman Spectra	68
5.5	Intermolecular Low-frequency Modes	72
	References	76

Chapter 6	Computational Approach	78
	<i>Satoru Iuchi and Hirofumi Sato</i>	
6.1	Computational Approach	78
6.1.1	Quantum Chemistry	78
6.1.2	Molecular Simulations and Statistical Mechanics	81
6.1.3	Computational Methods for Metal Complexes in Solutions	83
6.1.4	Examples of Advanced Theories and Computations	84
	References	91
Chapter 7	Solvent Properties	92
	<i>Toshio Yamaguchi</i>	
7.1	Introduction	92
7.2	Physicochemical Properties of Solvents	92
7.3	Types of Solvents	93
7.4	Water Characteristics and Anomalies	93
7.5	Ionic Liquids	94
7.6	Deep Eutectic Solvents (DESS)	95
7.7	Solvent Parameters	95
7.7.1	Functional Groups	96
7.7.2	Dielectric Constant	96
7.7.3	Coordination Ability	96
7.7.4	Polarity	97
7.7.5	Intermolecular Forces	97
7.7.6	Protic/Aprotic Solvents and Acidic/Basic Solvents	98
7.7.7	Ionization Power	98
7.7.8	Hydrophilicity–Hydrophobicity	98
7.8	Examples of Solvent Parameters	98
7.8.1	Relative Permittivity (Permittivity)	99
7.8.2	E_T Value	100
7.8.3	Dissolution Parameter δ	101
	Appendix 1	102
	References	104
Chapter 8	Solvent Structures	105
	<i>Toshio Yamaguchi</i>	
8.1	Introduction	105
8.2	Water	105
8.3	Alcohol and Alcohol–Water Mixed Solvents	108

8.4	Amide Solvents	110
8.5	Protic Polar Solvents	111
8.5.1	Dimethyl Sulfoxide (DMSO; $(\text{CH}_3)_2\text{SO}$)	111
8.5.2	Acetonitrile (AN; CH_3CN)	112
8.5.3	Acetone ($(\text{CH}_3)_2\text{CO}$)	112
8.5.4	Chloroform (CHCl_3)	113
8.5.5	Dichloromethane (CH_2Cl_2)	114
8.5.6	Cyclic Ether: Dioxane ($(\text{CH}_2)_4\text{O}_2$) and Tetrahydrofuran (THF; $(\text{CH}_2)_4\text{O}$)	114
8.6	Low Polarity Solvents	114
8.6.1	Benzene (C_6H_6) and Toluene ($\text{C}_6\text{H}_5\text{CH}_3$)	114
8.6.2	Carbon Tetrachloride (CCl_4)	115
8.6.3	Ionic Liquids (ILs)	115
8.6.4	Deep Eutectic Solvents (DESSs)	116
	References	118
Chapter 9	Hydration and Solvation of Metal Ions	120
	<i>Ingmar Persson</i>	
9.1	Introduction	120
9.2	Structures of Hydrated and Solvated Metal Ions in the Solid State and Solution	121
9.2.1	Oxygen Donor Solvents	121
9.2.2	Nitrogen Donor Solvents	130
	Acknowledgements	134
	References	134
Chapter 10	Ion Solvation in Non-aqueous and Mixed Solvents	140
	<i>Yasuhiro Umebayashi and Ingmar Persson</i>	
10.1	Introduction	140
10.2	Bond Length Variation Rule	140
10.3	Ligand Cone Angle	142
10.4	Hammett Rule and Steric Factors	142
10.5	Metal Ion Solvates with Solvents Space-demanding Upon Coordination	143
10.5.1	First Row Transition Metal(II) Ions	143
10.6	Reactivity of Metal Ion Solvates with Low Symmetry	145
10.7	Solvation Structure of Metal Ions in Mixed Solvents	146
10.7.1	Selective Solvation by the Steric Factor	147
10.7.2	Selective Solvation by Liquid Structural Properties	148
	References	149

Chapter 11 Reactions of Metal Complexes in Solution	151
<i>Koji Ishihara and Masahiko Inamo</i>	
11.1 Introduction	151
11.1.1 Solvation Model of Metal Ions	152
11.1.2 Formation Constant of a Metal Complex	152
11.1.3 Conditional Formation Constant of a Metal Complex	154
11.1.4 The Types of Reactions of Metal Ions in Solution	157
11.1.5 Mechanism of the Ligand Substitution Reaction	159
11.1.6 Solvent Exchange Reaction	160
11.2 Complex Formation Reaction	163
11.2.1 Complex Formation Reactions of Aquametal Ions (M^{n+}) and Hydroxo-metal Ions ($M(OH)^{(n-1)+}$)	165
11.2.2 Complex Formation Reaction with a Bidentate Ligand	168
11.2.3 Complexation Reaction of Porphyrins	169
11.2.4 Acid Dissociation Reaction	172
11.2.5 Mechanism of the Ligand Substitution Reaction and Rate Law	174
References	183
Chapter 12 Electron Transfer Reactions in Solution	185
<i>Hideo D. Takagi</i>	
12.1 Introduction	185
12.2 Classical and Semi-classical Marcus Theory for Outer-sphere Electron Self-exchange Reactions in Solution	187
12.2.1 Coulombic Work to Bring Two Reactants to Form the Encounter Complex	188
12.2.2 Outer-sphere Reorganization Energy for Electron Self-exchange Reactions in Solution	190
12.2.3 Inner-sphere Reorganization Energy for Electron Self-exchange Reactions	191
12.2.4 Semi-classical Expression of Outer-sphere Electron Transfer Reactions	192
12.3 Two-state Model and Inverted Region of Cross Reactions	195

12.4	Brønsted Coefficient	196
12.5	Cross Relations	197
12.6	Verification of the Theory	200
12.7	Examinations of the Marcus Theory: Measurements at Elevated Pressures	201
12.7.1	Electron Self-exchange Reactions in Solution at Elevated Pressures	203
12.7.2	Electron Self-exchange Reactions at Electrodes	204
12.8	Some Other Important Physical Concepts for Further Understanding of Electron Transfer Reactions	206
12.8.1	Pekar Factor as a Tool to Analyze the Behavior of Solvent Molecules Around the Contact Pair During the Activation Process	206
12.8.2	Electron Transfer Reactions in Which Inner- and Outer-sphere Reorganizations Appear to Take Place Separately: The Gated Phenomena	207
12.8.3	Concerted but Very Slow Outer-sphere Reactions	209
	Appendix 1. Coordination Bond and Metal Complexes	210
	Appendix 2. Electronic Coupling	212
	Appendix 3. Physical View of Chemical Reactions	213
	Acknowledgements	220
	References	220
Chapter 13	Metal Complexes in Supercritical Fluids	225
	<i>Tatsuya Umecky</i>	
13.1	Introduction	225
13.2	Fundamental Properties of SCFs	226
13.3	Dissolution Characteristics of Substances in SC-CO ₂	227
13.4	Solvation Structure of β -Diketonato Complexes in SC-CO ₂	229
13.5	Entrainer Effects on SC-CO ₂ Extraction	231
13.6	Summary	232
	Abbreviations	234
	References	234

Chapter 14 Reactions and Equilibria of Metal Complexes Under High Pressure	236
<i>K. Ishihara</i>	
14.1 Introduction	236
14.2 Reaction Volume and Activation Volume	237
14.3 Reaction Volumes and Activation Volumes	239
14.3.1 Reaction Volumes	239
14.3.2 Activation Volumes	240
14.4 Volume Changes for the Reactions in Solution	243
References	247
Chapter 15 Metal Complexes in Ionic Liquids	248
<i>Toshiyuki Takamuku and Masayasu Iida</i>	
15.1 Metal Complexes in Ionic Liquids	248
15.1.1 Solvation Structure of Transition Metal Ions in ILs	249
15.2 Complex Formation of Transition Metal Ions with Inorganic Anions in ILs	250
15.3 Complex Formation of Transition Metal Ions with MLs in ILs	252
15.4 Ionic Liquids Having Chelate Amines	256
15.4.1 Metal Complexes of <i>N</i> -alkylethylenediamines (Alkyl-en) and the Formation of ILs	256
15.4.2 PILs of Alkyl-en and of <i>N</i> -alkyldiethylenetriamines (Alkyl-dien)	258
15.4.3 Cu(II) Ion Complexations in the PILs of Hex-en and Hex-dien	259
15.5 Deep Eutectic Solvents (DESSs) and Betainium-based ILs	260
Acknowledgements	264
References	265
Chapter 16 Metal Complexes in Micellar and Liquid Crystalline Solutions	267
<i>Masayasu Iida</i>	
16.1 Metal Complexes in Micellar and Liquid Crystalline Solutions	267
16.1.1 Interactions of Tripositive Metal Complex Ions with Surfactants in Ionic Micellar and Liquid Crystalline Solutions	268

16.1.2	Amphiphiles Comprising Ionic Metal Complexes	272
16.1.3	Formation of Micelles Comprising Amphiphilic Metal Complexes	273
16.1.4	Microemulsions and Lyotropic Liquid Crystals Formed from Alkyl-en Metal Complexes (Type II)	276
16.1.5	Lyotropic Liquid Crystals Composed of Dinuclear Chiral Chromium(III) Complexes (Type III)	281
	References	285
Chapter 17 Inorganic Biochemistry		287
	<i>Akira Odani</i>	
17.1	The Interface Between Inorganic Biochemistry and Solution Coordination Chemistry	287
17.2	Study of Weak Interactions is Important for Substance Recognition	288
17.2.1	Base Selectivity of Nucleic Acid Intercalators	288
17.2.2	Relationship Between Metalloenzyme Reaction Fields and Hydrophobic Fields	290
17.2.3	Study on the Equilibrium System in Blood	291
17.2.4	Study of Reaction Intermediates	292
17.2.5	Nucleic Acid-Cation Interactions	293
17.2.6	Applications for Metal Drugs	294
17.3	Contribution of Solution Coordination Chemistry to Life Science	295
	References	297
Chapter 18 Solvent Extraction		299
	<i>Christian Ekberg</i>	
18.1	Introduction	299
18.2	Extraction with Acidic Extractants	301
18.3	Extraction with Solvating Extractants	302
18.4	Ion Pair Extraction	303
18.5	Determination of Stability Constants Using Solvent Extraction	304
18.6	Separative Extraction	306
18.7	Process	307
18.8	Thermodynamics	308
	References	312

Chapter 19 Complex Formation in Hyperalkaline Solutions	313
<i>Bence Kutus and Pál Sipos</i>	
19.1 Introduction	313
19.2 Studying Complexation Equilibria in Hyperalkaline Media	314
19.2.1 General Scheme of Complex Formation Processes	314
19.2.2 Methods to Probe Complexation Reactions	315
19.2.3 Practical and Theoretical Difficulties and Considerations	316
19.3 Hydroxido Complexes of Some Selected Metal Ions Forming at pH > 13	317
19.3.1 Thallium(I)	317
19.3.2 Calcium(II)	317
19.3.3 Tin(II)	318
19.3.4 Lead(II)	318
19.3.5 Iron(III)	319
19.3.6 Aluminium(III)	319
19.3.7 Gallium(III)	319
19.3.8 Solids	320
19.4 Complexes with O-donor Ligands Forming in Hyperalkaline Solutions	320
19.4.1 Calcium(II)	320
19.4.2 Iron(III)	322
19.4.3 Aluminium(III)	323
19.4.4 Neodymium(III)	323
Acknowledgements	327
References	327
Chapter 20 Resource Separation from Salt Lake Brine	331
<i>Yongquan Zhou, Zhong Liu and Min Wang</i>	
20.1 Salt Lake Brine and Resources	331
20.2 Potassium (K)	332
20.3 Lithium (Li)	335
20.3.1 Solvent Extraction	336
20.3.2 Ion-sieve Adsorption	337
20.3.3 Membrane Separation Technology	339
20.4 Boron (B)	340
20.5 Rubidium (Rb), Cesium (Cs) and Other Rare Dispersion Elements	343

20.6	Prospects and Outlook	345
20.6.1	Advancing the Understanding of Brines	345
20.6.2	Characterizing the Interface of Concentrated Salt Solutions and Understanding the Interfacial Forces	346
20.6.3	Understanding the Physical and Chemical Changes That Result from External Forces	346
20.6.4	Green Chemistry Should be a Consistent Strategy During Salt Lake Resource Exploration	346
