Philosophy of Mathematics in Antiquity and in Modern Times

»*Philosophy of Mathematics*« is understood, in this book, as an effort to clarify such questions that mathematics itself raises but cannot answer with its own methods. These include, for example, questions about the ontological status of mathematical objects (e.g., what is the nature of mathematical objects?) and the epistemological status of mathematical theorems (e.g., from what sources do we draw when we prove mathematical theorems?). The answers given by Plato, Aristotle, Euclid, Descartes, Locke, Leibniz, Kant, Cantor, Frege, Dedekind, Hilbert and others will be studied in detail. This will lead us to deep insights, not only into the history of mathematics, but also into the conception of mathematics as it is commonly held in the present time.

The book is a translation from the German, however revised and considerably expanded. Various chapters have been completely rewritten.

Introduction	1
Part I. Philosophy of Mathematics in Antiquity	9
Chapter 1 The Concept of Mathematics	11
1.1 The discovery of incommensurable quantities	11
1.2 The concept of ' <i>mathematics</i> '	17
1.3 The occurrence of ontological problems	19
References	21
Chapter 2 PLATO's Philosophy of Mathematics	23
2.1 PLATO's views on the teaching of mathematics: <i>mathesis</i> as <i>anamnesis</i>	24
2.2 The Platonic doctrine of ' <i>ideas</i> '	26
2.3 The world of mathematical objects	28
2.4 The construction of a mathematical theory according to PLATO	30
2.5 Of ' <i>ideas</i> ', ' <i>notions</i> ' and ' <i>concepts</i> '	31
2.6 Concluding remarks	33
References	33
Chapter 3 The Aristotelian Conception of Mathematics	35
3.1 The Aristotelian concept of a scientific theory	36
3.2 The Aristotelian Apodeixis	38
3.3 The ontological status of mathematical objects	39
3.4 Aphairesis (Ἀφαίρεσις)	40
3.5 Chôrismós (Χωρισμός)	43
3.6 The foundation of Arithmetic according to ARISTOTLE	44
3.7 The foundation of Geometry according to ARISTOTLE	45
References	48
Chapter 4 The Axiomatic Method of EUCLID	51
4.1 The ' <i>Elements</i> ' (Στοιχεῖα) of EUCLID	52
4.2 The terminology in the ' <i>Elements</i> ' of EUCLID	53
4.3 What should the ' <i>definitions</i> ' achieve?	54
4.4 What should the ' <i>common notions</i> ' achieve?	55
4.5 What should the ' <i>postulates</i> ' (aitemata) achieve?	56
4.6 ' <i>Axioms</i> ', ' <i>postulates</i> ', ' <i>hypotheses</i> ' and ' <i>lambanomena</i> '	57
4.7 The representation of Geometry in the ' <i>Elements</i> ' of EUCLID	59
4.8 The arguments in the problems, resp. theorems I,1 and I,2 and I,4	60
4.9 Discussion	63
References	64

Chapter 5 Finitism in Greek Mathematics	67
5.1 Actual and potential infinity (ARISTOTLE)	68
5.2 Drawing perpendicular straight lines in the ' <i>Elements</i> ' of EUCLID	69
5.3 The concept of parallelism (EUCLID)	71
5.4 The number of grains of sand (' <i>The Sand-Reckoner</i> ' of ARCHIMEDES)	72
5.5 The existence of infinitely many prime numbers (EUCLID)	75
5.6 The exhaustion method (EUDOXOS)	76
5.7 Proofs of irrationality (HIPPASOS)	77
5.8 The exclusion of the 'unlimited'	77
References	79

Chapter 6 The Paradoxes of ZENO	81
6.1 The Zenonian Paradoxes	82
6.2 The effect of ZENO's paradoxes in the Middle Ages	85
6.3 The question of the existence of actual infinite quantities is examined	86
6.4 BURIDAN's treatment of the infinity problem according to the method of <i>sic et non</i>	88
6.5 Concluding remarks	92
References	93

Part II Philosophy of Mathematics in the 16th, 17th and 18th Century 95

Chapter 7 On Certainty in Mathematics	97
7.1 The publication of the works of EUCLID and PROCLUS in the original Greek	97
7.2 The differences between Aristotelian <i>apodeixis</i> and Euclidean <i>demonstration</i>	99
7.3 The dispute over the question as to whether Euclidean geometry is a science in the Aristotelian sense, or not	100
7.4 ARISTOTLE's own argument	103
7.5 Discussion	105
References	107

Chapter 8 The Cartesian nativism, The Prometheus Myth, Augustinian Illuminism & Cartesian Rationalism	109
8.1 The Divine Origin of Mathematics	109
8.2 The Greek and Roman Stoics	110
8.3 Mathematical objects as thoughts of God (AUGUSTINUS)	111
8.4 RENÉ DESCARTES: Mathematical laws as edicts of a deity	112
8.5 DESCARTES' nativism	114
8.6 The <i>ideas</i> of mathematical objects	116
8.7 DESCARTES' concept of ' <i>intuition</i> '	117
8.8 DESCARTES' Essay ' <i>La Géométrie</i> '	119

8.9	Discussion	121
	References	122
Chapter 9	JOHN LOCKE's thoughts on Mathematics	125
9.1	LOCKE's doctrine of ' <i>Ideas</i> '	126
9.2	Abstraction and general ideas	128
9.3	The abstract idea of a triangle	129
9.4	LOCKE's comments on the concept of the number	130
9.5	LOCKE's comments on some geometrical theorems	131
9.6	Psychologism in LOCKE's work	132
9.7	Discussion	133
	References	134
Chapter 10	Rationalism	135
10.1	The problem of definitions in geometry	136
10.2	On refraining from definitions of the basic concepts (DESCARTES, PASCAL, ARNAULD)	137
10.3	The attempt to define the basic concepts with ' <i>genetic definitions</i> '	139
10.4	The contributions of HOBBS (1655) and BARROW (1664)	140
10.5	The contribution of LEIBNIZ (ca. 1676)	141
10.6	LEIBNIZ's ' <i>Dialogue for an Introduction to Arithmetic and Algebra</i> ' (ca. 1676)	142
10.7	Proof of the axioms of equality	143
10.8	The concept of axiomatics in TSCHIRNHAUS (1687)	144
10.9	' <i>The Method of teaching Mathematics</i> ' according to CHRISTIAN WOLFF	146
10.10	Discussion	147
	References	148
Chapter 11.	Empiricism in mathematics	151
11.1	BERKELEY's critique	151
11.2	DAVID HUME's scepticism	153
11.3	JOHN STUART MILLS critique	154
11.4	Discussion	157
	References	158
Chapter 12	KANT's Conception of Mathematics	161
12.1	KANT's curriculum vitae	161
12.2	KANT's ' <i>Critique of Pure Reason</i> '	162
12.3	The distinction: <i>a priori</i> - <i>a posteriori</i>	164
12.4	The distinction: <i>analytic</i> - <i>synthetic</i>	164
12.5	The synthetic character of geometric propositions	167
12.6	The synthetic character of arithmetic theorems	167
12.7	Of ' <i>pure intuition</i> ' and ' <i>empirical intuition</i> '	171
12.8	The a priori character of geometrical judgments	172

12.9	The a priori character of arithmetical judgments	173
12.10	Discussion	173
	References	175

Part III Philosophy of Mathematics in the 19th and early 20th Century 177

Chapter 13 Psychologism in Mathematics 179

13.1	Psyche, anima, mind and soul	180
13.2	The role of the psyche in ancient mathematics	181
13.3	The emergence of psychologism in the modern age	182
13.4	DEDEKIND's creation of irrational numbers	183
13.5	On the creation of natural numbers	185
13.6	On definition by abstraction	187
13.7	Concluding remarks	188
	References	189

Chapter 14 Logicism 191

14.1	FREGE's logicism	193
14.2	FREGE's foundation of arithmetic from the point of view of logicism	196
14.3	The appearance of antinomies	198
	References	202

Chapter 15 The Concept of a "Set" 203

15.1	The concept of a 'set' in classical antiquity	203
15.2	The BOLZANO concept of a 'set' ('Menge')	205
15.3	Cantorian set theory	209
15.4	The occurrence of set-theoretical antinomies	211
15.5	The Cantorian concept of a 'set' ('Menge')	213
15.6	An implicit definition of the concept of a 'set' (ZERMELO, QUINE et al.)	217
	References	218

Chapter 16 Contemporary Platonism 221

16.1	BOLZANO's Platonism	222
16.2	The usefulness of Platonism	223
16.3	The restricted (or weak) Platonism	225
16.4	GÖDEL's Platonism	225
16.5	GÖDEL's vindication of Platonism	227
16.6	Discussion	229
	References	230

Chapter 17 The Problem of non-constructive Proofs of Existence 231

17.1	The ' <i>existence</i> ' of transcendental real numbers	231
17.2	The ' <i>existence</i> ' of roots of polynomials	233

17.3	Proofs of existence in ancient mathematics	234
17.4	GAUSS: <i>notio</i> or <i>notatio</i> ?	236
17.5	The HILBERTian basis theorem	239
17.6	Fast primality tests	240
17.7	Discussion	242
	References	244
Chapter 18	The formal and the contentual Position	247
18.1	The contentual and the formal point of view	248
18.2	'Symbols' and 'empty signs'	250
18.3	The dispute over the introduction of negative numbers	251
18.4	Combining the contentual and the formal standpoints	254
18.5	FREGE's polemics against HANKEL's formal standpoint	257
18.6	Résumé	260
	References	261
Chapter 19	DEDEKIND and the emergence of Structuralism	263
19.1	The traditional concepts of the number	264
19.2	DEDEKIND's simply infinite systems	265
19.3	Properties of simply infinite systems	267
19.4	The different concepts of ' <i>abstraction</i> '	269
19.5	The problem of the existence of infinite systems	272
19.6	The axiomatization of Arithmetic (DEDEKIND, PEANO)	274
19.7	The emergence of Structuralism	276
19.8	A new approach to ' <i>abstraction</i> '	279
19.9	The ' <i>abstract</i> ' direction in Algebra	280
19.10	Final considerations	281
	References	281
Chapter 20	HILBERT's critical philosophy	283
20.1	HILBERT's Philosophy of Mathematics	284
20.2	HILBERT's Axiomatization of Geometry	286
20.3	HILBERT's critical study of Geometry	289
20.4	HILBERT's concept of an Axiomatic Theory and his Metamathematics	291
