Preface	vii	3.4 Strong and intermediate crystal field	58
1. Symmetry	1	3.5 Crystal field multiplets	62
1.1 Point groups	1	3.6 Programming hints	63
1.1.1 Basic definitions	1	4. Electronic spectra of transition metal complexes	69
1.1.2 Representations	1	4.1 Types of molecular spectra	69
1.1.3 Applications	4	4.2 Physical principles of absorption	71
1.2 Double point groups	6	4.2.1 Shape of spectral lines	72
1.3 Symmetry group	7	4.2.2 Selection rules	72
1.3.1 Basic definitions	7	4.2.3 Vibration assisted electronic transitions	73
1.3.2 Groups related to S_N	9	4.2.4 Franck–Condon principle	75
1.3.3 Symmetry of multi-electron systems	10	4.3 Electronic transitions in coordination compounds	76
1.3.4 Reduction for integral spin	11	4.3.1 Effect of polarization of radiation	77
1.3.5 Reduction for half-integral spin	12	4.3.2 Effect of spin–orbit coupling	78
1.3.6 Symmetry relationships	12	4.3.3 Effect of temperature	79
1.4 Coupling coefficients	13	4.3.4 Effect of the symmetry lowering	80
1.5 Irreducible tensor operators	16	4.3.5 The Jahn–Teller effect	81
1.6 Jahn–Teller effect	18	4.3.6 Solvent effect	82
1.7 Application of the symmetry group	24	4.3.7 Effect of electron repulsion (nephelauxetic effect)	82
2. Electronic levels in a free atom	29	4.3.8 Spectrochemical series	83
2.1 Atomic orbitals	29	4.3.9 Charge transfer spectra	83
2.2 Atomic terms	29	4.3.10 Intervalence charge transfer transitions	83
2.2.1 Basic definitions	29	4.3.11 Ligand–ligand transitions	83
2.2.2 Energies of atomic terms	32	4.3.12 Complexes of 2 nd and 3 rd transition metal series	85
2.2.3 Irreducible tensor approach	33	4.4 Case studies	87
2.3 Atomic multiplets	34	5. Magnetism of transition metal complexes	95
2.4 Zeeman levels	37	5.1 Basic concepts	95
2.5 Computer-aided calculations	41	5.2 Magnetism of mononuclear complexes	97
2.5.1 Atomic terms	41	5.2.1 Statistical thermodynamics of magnetism	97
2.5.2 Atomic multiplets	42	5.2.2 Interactions in magnetism	98
2.5.3 Zeeman levels	42	5.3 Spin Hamiltonian magnetism	99
3. Electronic levels in a crystal field	45	5.3.1 Curie paramagnet	99
3.1 Crystal field orbitals	45	5.3.2 Zero-field splitting systems	100
3.1.1 Basic definitions	45		
3.1.2 One-electron energy levels (orbital energies)	46		
3.2 Crystal field terms	51		
3.2.1 Basic definitions	51		
3.2.2 Energies of crystal field terms	52		
3.3 Hand calculations of weak field terms	54		

5.4	Magnetic angular momentum	103	7.3	X-ray photoelectron spectroscopy	162
5.4.1	Magnetism of T-terms	103	7.4	UV photoelectron spectroscopy	165
5.4.2	Descent of cubic symmetry	110			
5.4.3	Magnetism of atomic multiplets	111	8.	Key properties of d-electron configurations	167
5.4.4	Magnetism of E-term systems	113	8.1	Practical guide to group theory	167
5.4.5	Multireference spin systems	114	8.2	Spin Hamiltonians	169
5.4.6	Spin crossover systems	114	8.3	Practical calculations	171
5.5	Introduction to exchange coupled systems	116			
5.5.1	Dinuclear complexes	116	9.	Properties of d ¹ - and d ⁹ -electron configurations	175
5.5.2	Polynuclear systems	118			
5.6	Single molecule magnets	121	10.	Properties of d ² - and d ⁸ -electron configuration	205
5.7	Magnetic studies	124	11.	Properties of d ³ - and d ⁷ -electron configuration	243
5.8	Molecule-based magnets	131	12.	Properties of d ⁴ - and d ⁶ -electron configurations	281
6.	Electron spin resonance of transition metal complexes	137	13.	Properties of d ⁵ -electron configuration	321
6.1	Principles of electron spin resonance	137	Appendix A:	Point groups of symmetry, character tables, and branching rules	341
6.1.1	Electron spin resonance spectrum	137	Appendix B:	Atomic parameters	367
6.1.2	Hyperfine interaction	138	Appendix C:	Useful matrix elements and coefficients	375
6.1.3	Quadrupole interaction	142	Index		383
6.2	Spin Hamiltonian in electron spin resonance	143			
6.3	Electron spin resonance of zero-field splitting systems	145			
6.3.1	Effective spin concept	146			
6.3.2	High-field/high-frequency electron spin resonance	147			
6.4	Electron spin resonance spectra of coordination compounds	149			
6.5	Ab initio calculations	150			
7.	High energy spectroscopies	157			
7.1	Mössbauer spectroscopy	157			
7.2	X-ray absorption spectroscopy	160
