Preface	v
Acknowledgments	vii
Using the CD-ROM	ix
1. Introduction to Medical Research.	1
The Scope of Biostatistics & Epidemiology 1	
Biostatistics in Medicine 1	
The Design of This Book 3	
The Organization of This Book 4	
Additional Resources 5	
2. Study Designs in Medical Research	7
Classification of Study Designs 7	
Observational Studies 8	
Experimental Studies or Clinical Trials 15	
Meta-Analysis & Review Papers 18	
Advantages & Disadvantages of Different Study Designs 18	
Summary 20	
3. Summarizing Data & Presenting Data in Tables & Graphs	23
Purpose of the Chapter 25	
Scales of Measurement 26	
Summarizing Numerical Data with Numbers 27	
Displaying Numerical Data in Tables & Graphs 32	
Summarizing Nominal & Ordinal Data with Numbers 40	
Tables & Graphs for Nominal & Ordinal Data 46	
Describing Relationships Between Two Characteristics 47	
Graphs for Two Characteristics 53	
Examples of Misleading Charts & Graphs 54	
Computer Programs 56	
Summary 56	
4. Probability & Related Topics for Making Inferences About Data	61
Purpose of the Chapter 63	
The Meaning of the Term "Probability" 63	
Populations & Samples 68	
Random Variables & Probability Distributions 72	
Sampling Distributions 80	
Estimation & Hypothesis Testing 88	
Summary 90	
5. Research Questions About One Group	93
Purpose of the Chapter 95	
Mean in One Group When the Observations Are Normally Distributed 96	
Hypothesis Testing 104	
Research Questions About a Proportion in One Group 110	
Means When the Same Group Is Measured Twice 114	
Proportions When the Same Group Is Measured Twice 118	
What to Do When Observations Are Not Normally Distributed 121	
Mean Differences When Observations Are Not Normally Distributed 124	
Finding the Appropriate Sample Size for Research 125	
Summary 131	
6. Research Questions About Two Separate or Independent Groups	134
Purpose of the Chapter 135	
Decisions About Means in Two Independent Groups 136	
Decisions About Proportions in Two Independent Groups 146	
Finding Sample Sizes for Means and Proportions in Two Groups 154	
Summary 158	
7. Research Questions About Means in Three or More Groups	162
Purpose of the Chapter 164	
Intuitive Overview of ANOVA 164	
Traditional Approach to ANOVA 168	
Multiple-Comparison Procedures 171	
Additional Illustrations of the Use of ANOVA 175	
Nonparametric ANOVA 182	
Comparing Frequencies or Proportions in More than Two Groups 182	
Sample Sizes for ANOVA 185	
Summary 186	

8. Research Questions About Relationships Among Variables	190
An Overview of Correlation & Regression 192	
Correlation 192	
Comparing Two Correlation Coefficients 196	
Other Measures of Correlation 198	
Linear Regression 202	
Use of Correlation & Regression 210	
Sample Sizes for Correlation & Regression 214	
Summary 215	
9. Analyzing Research Questions About Survival	221
Purpose of the Chapter 223	
Why Specialized Methods Are Needed to Analyze Survival Data 224	
Actuarial, or Life Table, Analysis 225	
Kaplan—Meier Product Limit Method 227	
Comparing Two Survival Curves 229	
The Hazard Function in Survival Analysis 237	
Interpreting Survival Curves from the Literature 238	
The Intention-to-Treat Principle 239	
Summary 241	
10. Statistical Methods for Multiple Variables	245
Purpose of the Chapter 247	
Multiple Regression 248	
Controlling for Confounding 257	
Predicting Nominal or Categorical Outcomes 260	
Predicting a Censored Outcome: Cox Proportional Hazard Model 264	
Meta-Analysis 267	
Methods for Classification 271	
Multiple Dependent Variables 273	
Summary of Advanced Methods 274	
11. Survey Research	280
The Research Questions 282	
Questionnaire Layout 286	
Reliability and Validity of Survey Instruments 287	
Administration of Surveys 289	
Selecting the Sample & Determining <i>N</i> 291	
Analysis of Survey Results 296	
Summary 298	
12. Methods of Evidence-Based Medicine and Decision Analysis	302
Introduction 304	
Evaluating Diagnostic Procedures with the Threshold Model 305	
Measuring the Accuracy of Diagnostic Procedures 306	
Using Sensitivity & Specificity to Revise Probabilities 307	
ROC Curves 314	
Decision Analysis 315	
Using Decision Analysis to Compare Strategies 320	
Using Decision Analysis to Evaluate Timing & Methods 321	
Computer Programs for Decision Analysis 325	
Summary 326	
13. Reading the Medical Literature	332
Purpose of the Chapter 332	
Review of Major Study Designs 332	
The Abstract & Introduction Sections of a Research Report 333	
The Method Section of a Research Report 334	
The Results Section of a Research Report 342	
The Discussion & Conclusion Sections of a Research Report 343	
A Checklist for Reading the Literature 343	
Appendix A: Tables	362
Appendix B: Answers to Exercises	372
Appendix C: Flowcharts for Relating Research Questions to Statistical Methods	398
Glossary	403
References	415
Index	423
