

Detailed Content

Preface	V
Content	VII
Detailed Content	IX
Chapter 1 Prices and Returns: Download, Calculation, and Visualization	1
1.1 Prices	1
1.1.1 Adjusted closing prices	2
1.1.2 Yahoo Finance and <i>Yfinance</i> package	3
1.2 Returns	7
1.2.1 Simple returns	7
1.2.2 Logarithmic returns	8
1.2.3 Aggregation of the returns in time	9
1.2.4 Aggregation of the returns in a portfolio	11
1.2.5 Returns calculation in Python	12
1.3 Data visualization	12
1.3.1 <code>plt.show()</code>	17
1.3.2 Multiple plots and shared axes	18
1.3.3 Histograms	19
1.3.4 3D plots	19
1.4 Random variables	21
1.4.1 Variance reduction techniques	23
1.5 Stochastic processes	24
1.5.1 Simulation of stock prices via GBM	25
1.5.2 Simulation of stock returns via ARIMA-GARCH processes	28
Chapter 2 Risk Measurement and Management	33
2.1 Axioms of coherent risk measures	34
2.2 Selected risk measures	35
2.2.1 Value at Risk	35
2.2.2 Conditional Value at Risk	36
2.3 VaR and CVaR estimation methods	37
2.3.1 The analytical method	39
2.3.2 The historical simulation method	41
2.3.3 The Monte Carlo simulation method	43
2.3.4 Example of risk quantification for FAANG stock portfolio	45
2.4 VaR estimation backtest	48
2.4.1 Kupiec's unconditional coverage test	51

2.4.2	Christoffersen's conditional coverage test	52
2.4.3	Example of risk estimation backtesting for FAANG stock portfolio	53
Chapter 3 Portfolio: Optimization and Performance Measurement		57
3.1	Wealth path calculation	57
3.2	Portfolio performance measurements	65
3.2.1	Final wealth and CAGR	66
3.2.2	Risk measures	67
3.2.3	Performance ratios	69
3.2.4	Performance measurement in Python: <i>Pyfolio</i>	73
3.3	Portfolio optimization	75
3.3.1	Mean-variance optimization framework	75
3.3.2	Generalized mean-risk optimization framework	78
3.3.3	Performance ratio maximization	78
3.3.4	Other portfolio optimization approaches	79
3.3.5	Portfolio optimization packages in Python	80
3.4	CAPM model and Fama-French models	85
3.4.1	CAPM model	86
3.4.2	Fama-French factor models	92
3.5	Backtesting of portfolio optimization models	95
3.5.1	Possible biases	96
3.5.2	Simple two-period backtest	97
3.5.3	Rolling-window approach	101
Chapter 4 Technical Analysis and Algorithmic Trading		105
4.1	Basic tools in technical analysis	105
4.1.1	Charts	106
4.1.2	Trends	108
4.1.3	Chart patterns	108
4.1.4	Support and resistance	109
4.1.5	Indicators	109
4.2	Automated trading systems (ATS)	115
4.2.1	Backtesting of automated trading system	116
4.2.2	Parameters optimization	119
4.3	Technical analysis packages in Python	121
4.3.1	<i>Ta-Lib</i> package	121
4.3.2	<i>Ta</i> package	122
4.3.3	<i>Backtrader</i> package	123
Chapter 5 Options		125
5.1	Option introduction	125
5.1.1	Put-Call Parity	127
5.1.2	Risk neutral valuation principle	128
5.2	Black-Scholes valuation formula	128
5.2.1	Option greeks	130
5.2.2	Implied volatility smile and implied volatility surface	132
5.3	Lattice models	133
5.3.1	Binomial option pricing model	134
5.4	Monte Carlo and least squares Monte Carlo	137

5.4.1	Valuation of European options via Monte Carlo simulation	137
5.4.2	Valuation of American options via least squares Monte Carlo	139
Appendices		143
Appendix A: List of Helpful Packages		145
Appendix B: Linear Regression in Python		149
Appendix C: Additional Codes		155
Bibliography		157
List of Figures		163
List of Tables		165
List of Codes		167
List of Questions		169
Index		171
