PERIODIC TABLE OF THE ELEMENTS	xxvi

Chapter 1 An Introduction to Soil Mineralogy **1**

D. G. SCHULZE

I. Chemical and Structural Classification of Minerals	1
A. Halide, Sulfate, and Carbonate Minerals	3
B. Sulfides	3
C. Oxides, Hydroxides, and Oxyhydroxides	4
D. Silicates	6
II. Phyllosilicate Minerals in Soils	6
A. Basic Structural Concepts	9
B. Structure and Properties of Phyllosilicate Minerals Common in Soils	16
III. Aluminosilicate Minerals with Short-Range Order: Allophane and Imogolite	24
IV. Some Crystallographic Concepts	25
A. Periodicity in Crystals	25
B. The Unit Cell	26
C. Miller Indices	27
D. X-ray Diffraction	29
V. Summary	33
VI. Problems and Exercises	33
ACKNOWLEDGMENTS	34
REFERENCES	34

Chapter 2 Surface Chemistry of Soil Minerals **35**

M. B. MC BRIDE

I. Nature of Mineral Surfaces	35
A. Diffuse Double-layer Model of Permanent-charge Minerals	35
B. Structure of the Layer Silicate–Solution Interface	40
C. Point of Zero Charge Concept for Variable-charge Minerals	44
D. Diffuse Double-layer Model of Variable-charge Minerals	47
E. Discrete-site Bonding Model of Variable-charge Minerals	49
F. Specifically Adsorbed Ions on Variable-charge Minerals	53
II. Processes at Mineral Surfaces	55
A. Ion Exchange Equations and the Problem of Surface Activity ..	55
B. A Statistical Mechanical Description of Ion Exchange	59
C. Difficulties with Ion Exchange Models	63
D. General Rules of Cation Exchange	65
E. Chemisorption of Cations and Anions	67
F. Clay Surface Acidity	70
G. Electron Transfer	72
H. Clay Swelling Behavior	75
I. The Covolume Model of Particle Interaction	80
III. Summary	81
IV. Appendix	82
REFERENCES	84

J. M. OADES

I.	The Nature of Organic Substances	92
A.	Plant Materials	92
B.	Humic Materials	94
C.	Nonhumic Substances—Carbohydrates	107
D.	Microbial Biomass	112
II.	The Persistence of Organic Substances	118
A.	The Use of ¹⁴ C as a Tracer	118
B.	Dating Techniques for Organic Matter	123
III.	Reactions of Well-Defined Chemicals with Clays	127
A.	Small Molecules	128
B.	Macromolecules or Polymers	131
C.	Predicted Behavior of Biopolymers in Soils	134
IV.	Natural Organo-Mineral Associations	135
A.	Density Fractionations	135
B.	Fractionations by Sedimentation	137
C.	Physical Disaggregation of Soils	138
D.	Associations of Organic Matter with Hydrous Oxides	145
V.	Conclusions	151
VI.	Acknowledgments	152
VII.	Problems and Exercises	152
VIII.	Supplemental Reading—Texts on Organic Matter	152
	REFERENCES	153

DHANPAT RAI AND JAMES A. KITTRICK

I.	Fundamentals of Mineral Equilibria	163
A.	Phase Rule	163
B.	Enthalpy, Entropy, and Free Energy	167
C.	Thermochemical Data Base	173
D.	Role of Solubility Measurements in Understanding the Soil System	177
II.	Use of Thermochemical Data in Understanding Soil Mineral Equilibria	179
A.	Soil Mineral Weathering Sequences	179
B.	Mechanisms That Control Aqueous Concentrations	185
C.	Geochemical Groundwater Modeling	189
D.	Selection of Appropriate Experiments or Experimental Parameters	189
III.	Past, Present, and Future	191
IV.	Study Problems	192
	REFERENCES	194

B. L. ALLEN AND B. F. HAJEK

I.	Soil Taxonomy: Soil Mineralogy Relationships	200
A.	Orders	201
B.	Suborders	201
C.	Great Groups	204
D.	Subgroups	205
E.	Families	205
F.	Series	209

II. Quartz and Other Silica Minerals	209
III. Feldspars	210
IV. Olivine, Amphiboles, Pyroxenes	213
A. Olivine	213
B. Amphiboles	214
C. Pyroxenes	215
V. Micas	215
A. Biotite	216
B. Muscovite	217
C. Clay Mica	218
VI. Vermiculite	220
VII. Chlorite	225
VIII. Smectite	228
A. Inheritance	229
B. Formation by Pedogenesis and Alteration	229
C. Alteration to Other Minerals	231
D. Distribution	231
IX. Talc and Pyrophyllite	232
X. Kaolinite and Halloysite	233
A. Kaolinite	233
B. Halloysite	236
XI. Serpentine	239
XII. Palygorskite and Sepiolite	240
XIII. Zeolites	242
XIV. Allophane and Imogolite	243
A. Allophane	244
B. Imogolite	245
XV. Carbonates, Sulfates, Sulfides, and Chlorides	246
A. Carbonates	246
B. Sulfates	247
C. Sulfides	249
D. Chlorides	250
XVI. Aluminum Oxides	250
XVII. Iron Oxides	252
A. Magnetite and Ilmenite	252
B. Goethite	253
C. Lepidocrocite and Akaganeite	254
D. Hematite	255
E. Maghemite	256
F. Ferrihydrite	256
G. Iron Oxides and Soil Families	256
XVIII. Manganese Oxides	256
XIX. Titanium and Zirconium Minerals	258
XX. Phosphate Minerals	260
XXI. Summary	261
XXII. Problems and Exercises	263
REFERENCES	264

Chapter 6 Carbonate, Halide, Sulfate, and Sulfide Minerals 279

HARVEY E. DONER AND WARREN C. LYNN

I. Calcite, Magnesium-Calcite, and Dolomite	279
A. Natural Occurrence	280
B. Crystallography	285
C. Formation and Stability	287
D. Identification	294
E. Impact on Soils	295
II. Gypsum and Other Moderately Soluble Sulfates	296
A. Natural Occurrence	296

B. Crystallography	297
C. Formation and Stability	297
D. Identification	300
E. Impact on Soils	301
III. Pyrite and Jarosite	302
A. Natural Occurrence	303
B. Crystallography	303
C. Formation and Stability	305
D. Identification	307
E. Impact on Soils	309
IV. Soluble Minerals	309
A. Natural Occurrence	309
B. Crystallography	313
C. Formation and Stability	314
D. Identification	319
E. Impact on Soil	320
V. Summary	320
VI. Problems and Exercises	323
REFERENCES	324

Chapter 7 Aluminum Oxides and Oxyhydroxides 331

PA HO HSU

I. Nomenclature and Structural Properties	331
II. Methods of Identification and Determination	338
A. X-ray Diffraction Analysis	338
B. Thermal Analysis	340
C. Infrared Absorption Analysis	343
D. Selective Dissolution	345
III. Mechanism of Aluminum Hydroxide Formation	346
A. Composition and Structure of OH-Al Polymers	347
B. Hydrolysis and Polymerization	351
C. Crystallization of Aluminum Hydroxides	353
D. Polymorphs of Aluminum Hydroxides	357
IV. Gibbsite in Soils	358
A. Occurrence	358
B. Genesis of Gibbsite in Soils	359
V. Formation of Aluminum Oxyhydroxides in Soils	362
VI. Reactions of Aluminum "Hydroxide" in Soils	363
A. Reaction with Anions	364
B. Adsorption of Cations	366
C. Stabilization of Soil Aggregates	369
VII. Problems and Exercises	371
REFERENCES	371

Chapter 8 Iron Oxides 379

U. SCHWERTMANN AND R. M. TAYLOR

I. Forms and Characteristics of Soil Iron Oxides	380
A. General	380
B. Goethite	382
C. Hematite	387
D. Lepidocrocite	390
E. Magnetite and Maghemite	391
F. Ferrihydrite	392
G. Other Minerals	394
II. Occurrence and Formation of Iron Oxides	395
A. General Processes	395

B. Thermodynamic Stability vs. Kinetics	396
C. Occurrence and Modes of Formation in Soils	398
III. Properties Relevant to Soils	407
A. Surface Structure	407
B. Surface Charge	407
C. Ion Adsorption	408
D. Adsorption of Organics	415
E. Aggregation and Cementation	416
IV. Iron Oxides and Microorganisms	419
A. Reduction of Iron Oxides by Microorganisms	419
B. Biotic Formation of Iron Oxides	420
V. Determination	421
A. General	421
B. Goethite	423
C. Hematite	424
D. Lepidocrocite	425
E. Maghemite-Magnetite	425
F. Ferrihydrite-Feroxyhite	426
VI. Acknowledgment	426
VII. Problems and Exercises	426
VIII. Supplemental Reading	427
REFERENCES	427

Chapter 9 Manganese Oxides and Hydroxides

439

R. M. MC KENZIE

I. The Manganese-Oxide Minerals	439
A. Tunnel Structures	440
B. Layer Structures	444
C. The Lower Oxides	446
D. Relation Between Tunnel and Layer Structures	447
II. Mineral Identification	449
A. X-ray Diffraction	449
B. Infrared Spectroscopy	449
III. Occurrence of the Minerals in Soils	451
IV. Oxidation of Manganese and Growth of Nodules	452
V. Formation of Manganese Minerals in Soils	455
VI. Chemical Properties	456
A. Chemical Composition	456
B. Surface Charge	457
C. Adsorption	457
VII. Summary	460
VIII. Problems and Exercises	460
REFERENCES	461

Chapter 10 Kaolin and Serpentine Group Minerals

467

J. B. DIXON

I. Structural Properties of Kaolin Minerals	468
A. Kaolinite	468
B. Halloysite	474
II. Morphological Characteristics of Kaolinite and Halloysite	474
A. Kaolinite	474
B. Halloysite	477
III. Formation of Kaolin	481
A. Rapid Synthesis of Kaolinite	481
B. Equilibrium Environment and Conditions for Synthesis	482
C. Kaolinite Formation Induced by Plant Growth	485

D. Kaolinite Formation from Hydroxy-Al-Interlayered Montmorillonite	485
E. Isotopic Composition of Kaolins Formed at Different Temperatures	486
F. Summary	486
IV. Occurrence of Kaolin Minerals in Soils, Rocks, and Sediments	486
A. Stability of Kaolinite in Weathering Environments	486
B. Kaolinite in Young Soils	487
C. Soils with Abundant Kaolinite Content	488
D. Rocks Containing Abundant Kaolinite	489
E. Formation and Distribution of Halloysite in Soils	489
F. Soil Kaolinite—A Major Source of Ocean Sediments	493
V. Order-Disorder in Kaolins	495
VI. Interstratification of Kaolinite and 2:1 Minerals	496
VII. Isomorphous Substitution in Kaolinite and Halloysite	497
VIII. Chemical Properties of Kaolinite	499
A. Cation Exchange	499
B. Anion Exchange	501
C. Flocculation and Dispersion	503
IX. Physical Properties of Kaolinite and Halloysite	506
X. Identification of Kaolinite and Halloysite	508
XI. Quantitative Analysis of Kaolinite and Halloysite	510
XII. Serpentine Minerals	511
A. Structure	511
B. Composition	512
C. Morphological Properties	512
D. Thermal Properties	514
E. Stability and Weathering	515
F. Synthesis	517
XIII. Problems and Exercises	518
XIV. Supplemental Reading	518
REFERENCES	519

Chapter 11 The Pyrophyllite-Talc Group 527

L. W. ZELAZNY AND G. N. WHITE

I. Structural Properties and Mineral Identification	527
A. Structures and Formulas	527
B. X-ray Diffraction	531
C. Thermal Analysis	533
D. Infrared Analysis	537
E. Optical Properties	539
II. Natural Occurrences	539
A. Geologic Extent	539
B. Soil Environment	542
III. Equilibrium Environment and Conditions for Synthesis	543
IV. Chemical Properties	545
V. Physical Properties	545
VI. Quantitative Determinations	546
VII. Problems and Exercises	546
REFERENCES	547

Chapter 12 Micas 551

DELVIN S. FANNING, VISSARION Z. KERAMIDAS, AND
MOHAMED A. EL-DESOKY

I. Structural Properties and Mineral Identification	552
A. Structures, Formulas, and Nomenclature	552

B. X-Ray Diffraction (XRD)	567
C. Differential Thermal Analysis (DTA)	571
D. Thermogravimetry (TG)	577
E. Infrared Spectroscopy (IR)	578
F. Electron Microscopy	580
G. Mössbauer Spectroscopy	581
H. Nuclear Magnetic Resonance (NMR)	582
II. Weathering and Synthesis Relationships	583
A. General Principles	583
B. Physical Weathering	583
C. Simple Transformation to Expansible 2:1 Minerals	584
D. Mica–Vermiculite–Kaolinite Stability Diagram and Complex Transformations	597
E. Pedogenic Mica	601
F. Illitization in Geologic Columns	603
G. Glauconite Formation and Weathering	605
III. Natural Occurrence	608
A. Occurrence in Soil Parent Materials	608
B. Occurrence in Soils	609
IV. Chemical Properties	611
A. Properties Related to Ion Exchange	611
B. Chemical Composition	618
V. Physical Properties	618
VI. Quantitative Determination	619
VII. Conclusions	620
VIII. Acknowledgments	622
IX. Problems and Exercises	622
X. Supplemental Reading	623
REFERENCES	624

Chapter 13 Vermiculites

635

LOWELL A. DOUGLAS

I. Distribution in Soils	635
II. Structure and Composition	639
III. Formation of Vermiculite	645
A. Release of Potassium	646
B. Oxidation of Iron	646
C. Hydroxyl Orientation	647
D. Total Charge	647
E. Stability of Vermiculites	650
IV. Identification of Vermiculites	652
A. X-ray Diffraction	653
B. Infrared Spectroscopy	657
C. Thermal Analysis	658
D. Electron Microscopy	659
E. Total Charge	660
F. Quantitative Determination of Vermiculite	661
V. Ion Exchange	662
A. Cation Exchange Capacity	662
B. Cation Exchange	662
C. Ion Fixation	664
VI. The Soil–Clay–Vermiculite Problem	667
VII. Problems and Exercises	668
REFERENCES	668

GLENN BORCHARDT

I. Structural Properties and Mineral Identification	675
A. X-Ray Diffraction (XRD)	677
B. Electron Optical Properties (TEM & SEM)	679
C. Thermal Analysis	682
D. Infrared (IR) Spectroscopy	683
E. Elemental Analysis (EA)	685
F. Selective Dissolution Analysis (SDA)	686
G. Mössbauer Spectroscopy (MS)	687
H. Other Methods of Smectite Identification	687
II. Natural Occurrence	689
A. Geographic Extent	689
B. Soil Environment	691
C. Sedimentary Occurrence	694
III. Equilibrium Environment and Conditions for Synthesis	697
A. Conditions for Laboratory Synthesis	697
B. Transformation and Formation in Soils	697
C. Smectite Weathering	701
IV. Chemical Properties	703
A. Cation Exchange	703
B. Anion Exchange	707
C. Reaction Kinetics	707
D. Molecular Sorption	708
E. Other Chemical Properties	708
F. Smectites and Soil Fertility	708
V. Physical Properties	709
A. Shrink-Swell	709
B. Water Retention	711
C. Cohesion and Adhesion	712
D. Particle Size Distribution	713
VI. Quantitative Determination	713
A. X-Ray Diffraction Methods	713
B. Surface Area Methods	714
C. Cation Exchange Capacity Methods	715
D. Other Methods of Quantitative Determination	715
VII. Conclusions	716
VIII. Problems and Exercises	716
IX. Supplementary Reading	718
REFERENCES	718

Chapter 15 Chlorites and Hydroxy-Interlayered Vermiculite and Smectite 729

RICHARD I. BARNHISEL AND PAUL M. BERTSCH

I. Origin and Sources of Chlorite	730
II. Structural Properties and Mineral Identification of Chlorite	731
A. Idealized Structures	731
B. X-ray Diffraction Properties	733
C. Chemical Properties	736
D. Thermal Properties	738
E. Infrared and Mössbauer Properties	740
III. Weathering of Chlorite Minerals	742
IV. Structural Properties and Mineral Identification of Hydroxy- Interlayered Vermiculite (HIV) and Smectite (HIS)	744
A. Idealized Structure and Generalizations	744
B. Identification by X-ray Diffraction (XRD)	746
C. Identification by Thermal Analysis	748

D. Identification by Infrared Analysis	749
E. Characterization of Hydroxy-interlayer Materials by Conductometric and Potentiometric Titrimetry	749
V. Origin, Sources, Distribution, and Weathering of Hydroxy Interlayered Materials	750
A. Origin and Sources	750
B. Distribution and Weathering	753
VI. Physicochemical Properties of Hydroxy-Interlayered Vermiculite (HIV) and Hydroxy-Interlayered Smectite (HIS)	756
A. Physical Properties	756
B. Chemical Properties	757
C. Removal of Hydroxy Interlayers	761
VII. Laboratory Synthesis of Hydroxy-Interlayered Vermiculite (HIV) and Smectite (HIS)	763
A. Synthesis Methodology	764
B. Type of Clay Mineral Structure	769
C. Nature of Hydroxy-Interlayer Material	771
D. Comparison of Synthetic and Naturally Interlayered Clays	774
VIII. Problems and Exercises	777
ACKNOWLEDGMENTS	778
REFERENCES	779

Chapter 16 Interstratification in Layer Silicates 789

BRIJ L. SAWHNEY

I. Regular Interstratification	789
A. Characterization of Regularly Interstratified Layers	790
B. Examples of Regularly Interstratified Minerals and Interpretation of Their X-ray Diffraction Patterns	790
II. Random Interstratification	797
A. Characterization of Randomly Interstratified Layers	797
B. Examples of Randomly Interstratified Minerals and Interpretation of Their XRD Patterns	807
III. Formation of Interstratified Minerals	812
A. Mica-Vermiculite	812
B. Mica-Smectite	813
C. Mechanism of Regular Interstratification	815
IV. Recent Developments	816
V. Summary	819
VI. Appendix—Sample Calculation for One-Dimensional Diffraction Profile	820
REFERENCES	824

Chapter 17 Palygorskite and Sepiolite Group Minerals 829

ARIEH SINGER

I. Basic Characteristics	830
A. Structure	830
B. Chemical Composition	832
C. Morphology	835
D. Surface Properties	838
II. Mineral Identification	843
A. Field and Optical Identification	843
B. X-ray Identification	843
C. Thermal Analysis	845
D. Transmission- and Scanning-Electron Microscopy (TEM and SEM)	846

E. Infrared and Mössbauer Spectroscopy	847
III. Formation of Palygorskite and Sepiolite	849
A. Synthesis	849
B. Equilibrium Conditions	852
C. Environments of Occurrence	854
D. Pedogenic Formation of Palygorskite	860
IV. Problems and Exercises	866
REFERENCES	866

Chapter 18 Zeolites in Soils 873

DOUGLAS W. MING AND FREDERICK A. MUMPTON

I. Structure and Composition	874
A. Definition	874
B. Composition	874
C. Crystal Structure	875
II. Properties and Applications	879
A. Mineralogical Properties	879
B. Cation-exchange Properties	880
C. Adsorption and Molecular Sieving Properties	882
III. Natural Occurrences	883
A. Geologic Occurrences	883
B. Pedogenic Occurrences	887
IV. Formation of Zeolites	890
A. Equilibrium Environments and Conditions for Formation	890
B. Synthesis under Hydrothermal Conditions	892
V. Mineral Identification	893
A. X-ray Diffraction	893
B. Morphology	895
C. Optical Microscopy	896
D. Thermal Analyses	900
E. Elemental Analysis	901
F. Other Analytical Methods	902
VI. Quantitative Determinations	904
A. X-ray Diffraction Methods	904
B. Cation-Exchange Methods	904
C. Adsorption Methods	905
VII. Problems and Exercises	906
VIII. Acknowledgments	906
IX. Supplemental Reading	906
REFERENCES	907

Chapter 19 Silica in Soils: Quartz and Disordered Silica Polymorphs 913

L. RICHARD DREES, LARRY P. WILDING, NEIL E. SMECK, AND
ABU L. SENKAYI

I. Structure and Chemical Composition	914
A. Crystal Structure	914
B. Chemical Composition	918
II. Mineral Identification	921
A. Physical Properties	921
B. Light Optical Properties	932
C. X-ray Diffraction	934
D. Thermal Properties	937
E. Infrared Spectroscopy	939
III. Quantitative Determination	941
A. Quartz	941

B. Opal-CT and Cristobalite	942
C. Opal-A	943
IV. Formation and Solubility of Silica Minerals	943
A. Formation of Silica Minerals	943
B. Solubility of Silica Minerals	948
C. Soil Factors Influencing Dissolution Kinetics	950
V. Natural Occurrence	954
A. Quartz	954
B. Opal-CT and Cristobalite	956
C. Opal-A	957
VI. Pedological Implications	959
A. Impact on Soil Properties	959
B. Quartz as a Stable Reference Mineral	961
C. Silica as an Indicator of Provenance	961
D. Silica as an Index of Environmental History	963
VII. Problems and Exercises	964
REFERENCES	965

Chapter 20 Feldspars, Olivines, Pyroxenes, and Amphiboles 975

P. M. HUANG

I. Structural Properties and Mineral Identification	976
A. Feldspars	976
B. Olivines, Pyroxenes, and Amphiboles	997
II. Natural Occurrence and Equilibrium Environment	1003
A. Feldspars	1003
B. Olivines, Pyroxenes, and Amphiboles	1013
III. Physicochemical Properties	1016
A. Feldspars	1016
B. Olivines, Pyroxenes, and Amphiboles	1029
IV. Quantitative Determination	1034
A. Feldspars	1034
B. Olivines, Pyroxenes, and Amphiboles	1037
V. Summary and Conclusions	1038
VI. Problems and Exercises	1038
VII. Supplementary Reading	1039
REFERENCES	1039

Chapter 21 Allophane and Imogolite 1051

KOJI WADA

I. Structural Properties and Mineral Identification	1052
A. X-ray Diffraction	1052
B. Electron Microscopy	1053
C. Electron Diffraction	1054
D. Chemical Analyses	1056
E. Infrared Spectroscopy	1059
F. X-ray Fluorescence Spectroscopy	1060
G. Nuclear Magnetic Resonance Spectroscopy	1060
H. Thermal Analyses	1061
I. Density and Surface-Area Measurement	1062
J. Structure Models	1062
II. Natural Occurrence	1064
A. Geographic Extent	1064
B. Soil Environment	1064
C. Sedimentary Occurrence	1068
III. Equilibrium Environment and Conditions for Synthesis	1068
IV. Chemical Properties	1070

A. Ion Exchange	1070
B. Surface Acidity	1072
C. Specific Adsorption of Cations and Anions	1073
D. Interaction with Organic Compounds	1076
V. Physical and Engineering Properties	1077
VI. Quantitative Determination	1080
VII. Conclusion	1080
VIII. Problems and Exercises	1081
REFERENCES	1081

Chapter 22 Phosphate Minerals 1089

WILLARD L. LINDSAY, PAUL L. G. VLEK, AND SEN H. CHIEN

I. Classification and Structure of Phosphate Minerals	1089
II. Occurrence of Phosphate Minerals in Soils	1102
A. Naturally Occurring Phosphate Minerals in Soils	1103
B. Reaction Products of Phosphate Fertilizers in Soils	1103
C. Surface Reactions of Phosphate on Soil Minerals	1107
III. Phosphate Mineral Equilibria in Soils	1109
A. Phosphate Species in Soil Solution	1109
B. A Unified Phosphate Solubility Diagram	1111
C. Effect of Redox on Phosphate Stability	1114
D. Polyphosphate Equilibria in Soil	1115
E. Equilibria of Trace Element Phosphates	1115
IV. Physical Characterization of Phosphate Minerals in Soils	1117
V. Conclusions	1124
VI. Problems and Exercises	1125
REFERENCES	1126

Chapter 23 Titanium and Zirconium Minerals 1131

A. R. MILNES AND R. W. FITZPATRICK

I. Geological and Geochemical Background: Titanium and Zirconium in Parent Materials	1132
A. Titanium	1132
B. Zirconium	1140
II. Forms and Occurrence of Titanium and Zirconium in Soils	1144
A. Residual Minerals	1147
B. Minerals Formed Through Weathering or Alteration	1153
C. Authigenic Minerals	1157
III. Chemical and Physical Properties of the Minerals Commonly Reported in Soils	1162
A. Crystal Structures and Chemistry	1162
B. Stability Relationships	1166
C. Charge Characteristics	1167
D. Magnetic Properties	1171
E. Techniques of Identification	1174
F. Influence on Soil Structure and Induration	1180
IV. Formation and Weathering of the Minerals	1183
A. Evidence for Titanium and Zirconium Mobility	1183
B. Synthesis of the Minerals	1186
C. Use of Titanium and Zirconium in Studies of Soil Formation	1190
V. Problems and Exercises	1194
ACKNOWLEDGMENTS	1194
REFERENCES	1194

Subject Index 1207
