## Part I

### Theoretical and conceptual evolutions

|   |           |
|---|-----------|
| <b>1. Communication and its relationship with digital and physical mobility patterns—A review</b> | <b>3</b>  |
| Peter van der Waerden, Mike Bérénos, and Geert Wets   |           |
| 1. Introduction   | 4         |
| 2. Literature review  | 6         |
| 3. The communicative system   | 13        |
| 4. First empirical insights   | 17        |
| 5. Conclusions, recommendations and research agenda   | 21        |
| Acknowledgment  | 25        |
| References  | 25        |
| <b>2. Review of international journey planning system to welcoming MaaS</b>                       | <b>29</b> |
| Paulus Aditjandra   |           |
| 1. Introduction   | 30        |
| 2. Journey planning system: A review  | 32        |
| 3. International survey of journey planners   | 37        |
| 4. Conclusion   | 43        |
| Acknowledgment  | 45        |
| References  | 46        |
| <b>3. Weather, travel behavior, and the influence and potential of ICT to improve resilience</b>  | <b>49</b> |
| Hannah Budnitz, Lee Chapman, and Emmanouil Tranos   |           |
| 1. Introduction   | 50        |
| 2. The relevance of weather   | 54        |
| 3. The resilience potential of ICT  | 61        |
| 4. A look to the future: Vision and validate  | 68        |
| References  | 71        |

|  |            |
|--|------------|
| <b>4. Relationships between mobile phone usage and activity-travel behavior: A review of the literature and an example</b> | <b>81</b>  |
| Yihong Wang, Gonalo Homem de Almeida Correia, and Bart van Arem   |            |
| 1. Introduction  | 82         |
| 2. Literature review   | 84         |
| 3. Case study  | 90         |
| 4. Methodology   | 91         |
| 5. Results and discussion  | 95         |
| 6. Conclusions and recommendations   | 99         |
| Acknowledgments  | 100        |
| References   | 100        |
| <b>5. ICT, millennials' lifestyles and travel choices</b>  | <b>107</b> |
| Yongsung Lee and Giovanni Circella   |            |
| 1. Introduction  | 108        |
| 2. Literature review   | 110        |
| 3. Research design   | 114        |
| 4. Results   | 119        |
| 5. Discussion  | 133        |
| 6. Conclusion  | 137        |
| Acknowledgments  | 138        |
| References   | 139        |

## Part II

### Evolution of travel time use

|  |            |
|--|------------|
| <b>6. The wicked problem of travel time use and the effects of ICTs</b>  | <b>145</b> |
| Glenn Lyons  |            |
| 1. Introduction  | 146        |
| 2. Treatment of travel time and its value in economic appraisal of transport                                     | 150        |
| 3. Six considerations of travel time use   | 156        |
| 4. Concluding discussion   | 165        |
| References   | 168        |
| <b>7. Activities while travelling? Travel time perception and travel time use in an era of automated driving</b> | <b>171</b> |
| Viktoria Kolarova, Rita Cyganski, and Barbara Lenz   |            |
| 1. Introduction  | 172        |
| 2. State of the art  | 175        |

|   |     |
|---|-----|
| 3. Conceptualizing "context" as relevant factor influencing alternative travel time perception and time use | 186 |
| 4. Outlook  | 198 |
| References  | 202 |
| Further reading   | 206 |

## Part III

### Socio-technical and methodological evolutions

|  |            |
|--|------------|
| <b>8. Triggering behavior changes with information and incentives: An active traffic and demand management-oriented review</b> | <b>209</b> |
| Qing Tang and Xianbiao Hu  |            |
| 1. Introduction  | 210        |
| 2. Systems development and current practices   | 213        |
| 3. Departure time choice behavior  | 222        |
| 4. Route choice behavior   | 230        |
| 5. Mode choice and destination choice behavior   | 237        |
| 6. Driving behavior  | 241        |
| 7. Conclusions and discussions   | 245        |
| References   | 245        |
| <b>9. Travel modeling under foreseeable communications-and-mobility technologies: Part I (short-term view)</b>                 | <b>251</b> |
| Yupo Chan  |            |
| 1. Scope   | 253        |
| 2. Instant information   | 254        |
| 3. Urban traffic incident management   | 255        |
| 4. Regional traffic management   | 263        |
| 5. Urban activity-based demand modeling  | 270        |
| 6. Modeling implications of connected (and automated) vehicles   | 280        |
| 7. Summary   | 284        |
| Acknowledgments  | 286        |
| References   | 286        |
| Further reading  | 289        |
| <b>10. Travel modeling under emerging communications and mobility technologies: Part II (long-term view)</b>                   | <b>291</b> |
| Yupo Chan  |            |
| 1. Scope   | 293        |
| 2. Methods for managing deep uncertainty   | 295        |

|  |     |
|--|-----|
| 3. Traffic management for connected and automated vehicles | 296 |
| 4. Regional demand modeling                                | 302 |
| 5. General demand modeling                                 | 312 |
| 6. Emerging urban and regional development models          | 318 |
| 7. Synthetic population data                               | 320 |
| 8. Adapting a strategic and visioning approach             | 328 |
| 9. Conclusions   | 331 |
| 10. Prospects  | 333 |
| Acknowledgments  | 335 |
| References   | 335 |
| Further reading  | 337 |
