

Keynotes.....	11
Czech National Semiconductor Cluster and Development of Semiconductor Ecosystem in the Czech Republic	12
Wide Band Gap (WBG) Semiconductor for Power Electronic – Status and Forecast	14
AI-Based Reliability Solutions for Semiconductor Devices	15
Microprocessors with Open Architecture RISC-V	17
Tackling semiconductor technology inflections and challenges by electron microscopy and adjacent analytical techniques	20
High temperature processes in silicon and silicon-carbide semiconductor technology	22
High-Power Semiconductors	24
Light sources for wavelength driven fibre optic sensors	26
Semiconductor and Passive Components Challenges in AI Power Management	30
Analytical Study of STM32F303CCT6 Microcontroller Samples	33
Water-based cleaning in microelectronics	35
Current trends of EDA software	41
Electron Beam Lithography and Functional Nanostructures	43
Abstracts	46
The Role of Computer Simulations in SiC Crystal Growth by the PVT Method	47
Predictive maintenance in semiconductor manufacturing – a case of Fault Detection Control for CVD process	50
Magnetic Properties of BiFeO ₃ PLD Thin Films Deposited over Ti/Si Substrates	51
Analysing Geometrical Effects on Electric Field Distribution in Silicon-Based Pyramid for Cold Field Emission	53
Vapour phase soldering.....	55
Use of energy harvesting for thermally stressed GaN semiconductor structures	58
