Part I Linear Algebra for Quantum Computing

1	The Most Important Step to Understand Quantum Computing	3
1.1	Introduction	3
1.1.1	Learning Outcomes	3
1.1.2	Teaching Videos	3
1.2	How to Learn Quantum Computing	4
2	First Impression	5
2.1	Introduction	5
2.1.1	Learning Outcomes	5
2.1.2	Teaching Videos	5
2.2	What Is Quantum Computing?	6
2.3	Summary	11
	Problems	11
3	Basis, Basis Vectors, and Inner Product	13
3.1	Introduction	13
3.1.1	Learning Outcomes	13
3.1.2	Teaching Videos	13
3.2	A Romantic Story	14
3.3	Vectors in Quantum Computing	15
3.4	Vector Space	17
3.5	Inner Products of Vectors	18
3.6	Higher Dimensional Vector Space	20
3.7	Summary	21
	Problems	22
4	Orthonormal Basis, Bra–Ket Notation, and Measurement	23
4.1	Introduction	23
4.1.1	Learning Outcomes	23
4.1.2	Teaching Videos	23
4.2	Orthonormal Basis	24

4.3	Bra-ket Notation	26
4.4	Quantum Mechanical State, Superposition, and Measurement	28
4.5	Summary	31
	Problems	31
5	Changing Basis, Uncertainty Principle, and Bra-Ket Operations	33
5.1	Introduction	33
5.1.1	Learning Outcomes	33
5.1.2	Teaching Videos	33
5.2	Basis and Uncertainty Principle	34
5.3	More Bra-Ket Operations	37
5.4	Summary	39
5.5	More About Python	40
	Problems	41
6	Observables, Operators, Eigenvectors, and Eigenvalues I	43
6.1	Introduction	43
6.1.1	Learning Outcomes	43
6.1.2	Teaching Videos	43
6.2	Observables and Operators	44
6.3	Eigenvalues and Eigenvectors	45
6.4	Eigenvalues and Eigenvectors Finding and Phase Factor	48
6.5	Remarks on Eigenvectors, Basis, and Measurement	49
6.6	Summary	50
	Problems	51
7	Pauli Spin Matrices, Adjoint Matrix, and Hermitian Matrix	53
7.1	Introduction	53
7.1.1	Learning Outcomes	53
7.1.2	Teaching Videos	53
7.2	Pauli Spin Matrices	54
7.3	Commutation and Anti-commutation	55
7.4	Spin Operator in Arbitrary Direction	57
7.5	Relationship Between Spin Direction and Real 3D Space	60
7.6	Adjoint and Hermitian Matrices	60
7.7	Summary	62
	Problems	62
8	Operator Rules, Real Eigenvalues, and Projection Operator	63
8.1	Introduction	63
8.1.1	Learning Outcomes	63
8.1.2	Teaching Videos	63
8.2	Operator Rules in the Bra-ket Notation	64
8.3	Eigenvalues of Hermitian Matrix	67
8.4	Copenhagen Interpretation/Born Rule and Projection Operator ...	67
8.5	Summary	70
	Problems	70

9	Eigenvalues II, Matrix Diagonalization and Unitary Matrix	73
9.1	Introduction	73
9.1.1	Learning Outcomes	73
9.1.2	Teaching Videos	73
9.2	Eigenvalues and Matrix Diagonalization	74
9.3	Unitary Matrix	77
9.4	Summary	80
	Problems	80
10	Unitary Transformation, Completeness, and Construction of Operator	81
10.1	Introduction	81
10.1.1	Learning Outcomes	81
10.1.2	Teaching Videos	81
10.2	Unitary Transformation	82
10.3	Construction of Unitary Transformation Matrices	84
10.4	Completeness of Basis	86
10.5	Construct Operator from Eigenvalues and Eigenvectors	88
10.6	Summary	88
	Problems	89
11	Hilbert Space, Tensor Product, and Multi-Qubit	91
11.1	Introduction	91
11.1.1	Learning Outcomes	91
11.1.2	Teaching Videos	91
11.2	Hilbert Space	92
11.3	Expansion of Hilbert Space and Tensor Product	93
11.4	Multi-Qubits	95
11.5	More About Tensor Product in Hilbert Space	98
11.6	Summary	98
	Problems	99
12	Tensor Product of Operators, Partial Measurement, and Matrix Representation in a Given Basis	101
12.1	Introduction	101
12.1.1	Learning Outcomes	101
12.1.2	Teaching Videos	102
12.2	Tensor Product of Vectors in General Form	102
12.3	Tensor Product of Operators	104
12.4	Partial Measurement	106
12.5	Matrix Representation in a Given Basis	107
12.6	Summary	109
	Problems	110

Part II Quantum Computing: Gates and Algorithms

13 Quantum Register and Data Processing, Entanglement, the Bell States, and EPR Paradox	113
13.1 Introduction	113
13.1.1 Learning Outcomes	113
13.1.2 Teaching Videos	114
13.2 Quantum Register	114
13.3 Quantum Data Processing	116
13.4 Entanglement and Bell States	117
13.5 Einstein–Podolsky–Rosen (EPR) Paradox	121
13.6 Summary	121
Problems	122
14 Concepts Review, Density Matrix, and Entanglement Entropy	123
14.1 Introduction	123
14.1.1 Learning Outcomes	123
14.1.2 Teaching Videos	123
14.2 Concepts Review Using Entanglement	124
14.3 Pure State, Mixed State, and Density Matrix	127
14.4 Measurement of Entanglement	128
14.5 Summary	131
Problems	131
15 Quantum Gate Introduction: NOT and CNOT Gates	133
15.1 Introduction	133
15.1.1 Learning Outcomes	133
15.1.2 Teaching Videos	133
15.2 Basic Quantum Gate Properties	134
15.3 NOT (X) Gate	136
15.3.1 Definition	136
15.3.2 Matrix	137
15.3.3 Circuit and Properties	137
15.4 XOR (CNOT) Gate	139
15.4.1 Definition	139
15.4.2 Matrix	140
15.4.3 Circuit and Properties	140
15.5 Summary	141
Problems	141
16 SWAP, Phase Shift, and CCNOT (Toffoli) Gates	143
16.1 Introduction	143
16.1.1 Learning Outcomes	143
16.1.2 Teaching Videos	143
16.2 SWAP Gate	144
16.2.1 Definition	144
16.2.2 Matrix	144

16.2.3 Circuit and Properties	145
16.3 Phase Shift Gate	145
16.3.1 Definition	145
16.3.2 Matrix	146
16.3.3 Circuit and Properties	146
16.4 Controlled Phase Shift Gate	148
16.4.1 Definition	148
16.4.2 Matrix	148
16.4.3 Circuit and Properties	149
16.5 Toffoli (CCNOT) Gate	149
16.5.1 Definition	149
16.5.2 Matrix	150
16.5.3 Circuit and Properties	151
16.6 Summary	152
Problems	153
17 Walsh–Hadamard Gate and Its Properties	155
17.1 Introduction	155
17.1.1 Learning Outcomes	155
17.1.2 Teaching Videos	155
17.2 Walsh–Hadamard Gate	156
17.2.1 Definition	156
17.2.2 Matrix	156
17.2.3 Circuit	157
17.3 Properties of the Hadamard Gate	158
17.3.1 Inverse of Hadamard Gate	158
17.3.2 Multiple-Qubit Hadamard Gate	159
17.3.3 Properties of n -Qubit Hadamard Gate	160
17.4 Summary	164
Problems	164
18 Two Quantum Circuit Examples	165
18.1 Introduction	165
18.1.1 Learning Outcomes	165
18.1.2 Teaching Videos	165
18.2 Quantum Circuit for Rotating Basis	166
18.2.1 Run on IBM-Q	169
18.3 Quantum Circuit for Implementing a SWAP Gate	170
18.3.1 Run on IBM-Q	172
18.4 Summary	172
Problems	173
19 No-Cloning Theorem and Quantum Teleportation I	175
19.1 Introduction	175
19.1.1 Learning Outcomes	175
19.1.2 Teaching Videos	176
19.2 No-Cloning Theorem	176

19.3	Quantum Teleportation.....	178	23.2.1	Computational Complexity	222
19.3.1	A Simplified Version	178	23.2.2	The Problem	222
19.3.2	Measurement in the $ +\rangle / -\rangle$ Basis	182	23.2.3	An Overview of Grover's Algorithm	224
19.3.3	Run on IBM-Q.....	183	23.2.4	Implementation of Grover's Algorithm.....	226
19.4	Summary.....	184	23.2.5	Circuit for Grover's Algorithm.....	229
Problems		184	23.3	Summary.....	230
20	Quantum Teleportation II and Entanglement Swapping	187	Problems		230
20.1	Introduction.....	187	24	Grover's Algorithm: II	231
20.1.1	Learning Outcomes	187	24.1	Introduction.....	231
20.1.2	Teaching Videos	187	24.1.1	Learning Outcomes	231
20.2	Quantum Teleportation: The Full Version.....	188	24.1.2	Teaching Videos	231
20.2.1	Run on IBM-Q.....	190	24.2	Numerical Example for Grover's Algorithm.....	232
20.3	Entanglement Swapping	192	24.2.1	Construction of Quantum Oracle	232
20.3.1	Run on IBM-Q.....	195	24.2.2	Construction of the Grover Diffusion Operator	234
20.4	Summary.....	195	24.2.3	Evolution of the Wavefunction.....	235
Problems		196	24.3	Simulation on IBM-Q.....	237
21	Deutsch Algorithm	199	24.4	Implementation Using XOR Quantum Oracle	238
21.1	Introduction.....	199	24.5	Summary.....	240
21.1.1	Learning Outcomes	199	Problems		240
21.1.2	Teaching Videos	200	25	Quantum Fourier Transform I.....	243
21.2	Deutsch Algorithm	200	25.1	Introduction.....	243
21.2.1	The Problem	200	25.1.1	Learning Outcomes	243
21.2.2	Classical Algorithm	202	25.1.2	Teaching Videos	243
21.2.3	Quantum Computing Solution	203	25.2	The N -th Root of Unity	244
21.2.4	The Quantum Circuit	206	25.3	Discrete Fourier Transform	246
21.2.5	Run on IBM-Q.....	208	25.4	Quantum Fourier Transform	248
21.3	Summary.....	208	25.5	Inverse Quantum Fourier Transform	252
Problems		209	25.6	Summary.....	253
22	Quantum Oracles and Construction of Quantum Gate Matrices	211	Problems		253
22.1	Introduction.....	211	26	Quantum Fourier Transform II.....	255
22.1.1	Learning Outcomes	211	26.1	Introduction.....	255
22.1.2	Teaching Videos	211	26.1.1	Learning Outcomes	255
22.2	Quantum Oracle	212	26.1.2	Teaching Videos	255
22.2.1	XOR Quantum Oracle.....	212	26.2	Another Definition of QFT and IQFT	256
22.2.2	Phase Quantum Oracle	214	26.3	Many-Qubit SWAP Gate.....	257
22.3	Construction of Quantum Gates and Oracles	215	26.4	QFT Circuit.....	258
22.4	Summary.....	219	26.4.1	Implementation of a 3-Qubit QFT Circuit.....	261
Problems		219	26.5	Implementation of IQFT	262
23	Grover's Algorithm: I	221	26.6	General Circuit of QFT	263
23.1	Introduction.....	221	26.7	Summary.....	263
23.1.1	Learning Outcomes	221	Problems		264
23.1.2	Teaching Videos	221			
23.2	Grover's Algorithm.....	222			

27 Bloch Sphere and Single-Qubit Arbitrary Unitary Gate	265
27.1 Introduction	265
27.1.1 Learning Outcomes	265
27.1.2 Teaching Videos	265
27.2 Bloch Sphere	266
27.3 Expectation Values of Pauli Matrices	269
27.4 Single-Qubit Arbitrary Unitary Rotation	270
27.5 Summary	274
Problems	274
28 Quantum Phase Estimation	277
28.1 Introduction	277
28.1.1 Learning Outcomes	277
28.1.2 Teaching Videos	278
28.2 General Controlled Unitary Gate	278
28.3 Quantum Phase Estimation	280
28.3.1 QPE for a 2×2 Matrix	281
28.3.2 Implementation on IBM-Q	285
28.3.3 General QPE Circuit	285
28.4 Summary	287
Problems	287
29 Shor's Algorithm	289
29.1 Introduction	289
29.1.1 Learning outcomes	289
29.1.2 Teaching Videos	290
29.2 Background	290
29.2.1 Encryption	290
29.2.2 Period Finding	290
29.2.3 Prime Integer Factorization	291
29.3 Shor's Algorithm	292
29.4 Summary	297
Problems	298
30 The Last But Not the Least	299
30.1 Introduction	299
30.1.1 Learning Outcomes	299
30.1.2 Teaching Videos	299
30.2 The End of the Beginning	300
30.3 Quantum Programming	300
30.4 Harrow–Hassidim–Lloyd (HHL) Quantum Algorithm	303
30.5 Next Steps	304

A Resources of This Book	305
B Extra Exercises	307
C Suggested Solutions	319
Index	349
