THE DEVELOPMENTAL CHARACTERS AND THEIR VARIABILITY IN NATURAL POPULATIONS OF *ARABIDOPSIS THALIANA* (L.) HEYNH.

I. CETL – J. DOBROVOLNÁ – E. EFFMERTOVA

Department of Genetics,
Natural Science Faculty, J. E. Purkyně University,
Brno

CONTENTS

Introduction	5
Material and Methods	7
1 Material	7
2 Methods	8
Results and discussion	13
1 The general developmental character of populations	13
2 The relation of the developmental character of populations to the geographical-climatic conditions	14
3 The variability within populations exemplified by the variation in the character "number of days to appearance of the flower primordia" in the generative plant fraction	23
4 The heritability of the character "number of days to appearance of the flower primordia"	28
5 The within-progeny variability in the character "number of days to appearance of the flower primordia"	31
6 The within-progeny variability in a vegetative population	35
General conclusions	36
Summary	39
Literature	41
