Introduction 3

PHYSICAL CHEMISTRY

CHAPTER 1 PATTERNS IN CHEMISTRY

- 1.1 An introduction to chemistry 12
- 1.2 Elements: the search for patterns 14
- 1.3 Mendeleev's periodic table 16
- 1.4 The modern periodic table 18

CHAPTER 2 THE NUCLEAR ATOM

- 2.1 Ideas about atoms 20
- 2.2 The discovery of the electron 22
- 2.3 The nucleus and protons 24
- 2.4 The nucleus and neutrons 26

CHAPTER 3 MASSES OF ATOMS AND THE MOLE

- 3.1 Finding the masses of atoms 28
- 3.2 The mass spectrometer 30
- 3.3 The mole 32
- 3.4 Finding molar masses 34

CHAPTER 4 ELECTRONS IN ATOMS

- 4.1 Using light to find out about atoms 38
- 4.2 The hydrogen spectrum and shells 40
- 4.3 The sodium spectrum and subshells 42
- 4.4 Wave mechanics 44
- 4.5 Visualizing atomic orbitals 46
- 4.6 Atoms with more than one electron 48
- 4.7 Electronic structure and the periodic table 50
- 4.8 More evidence for shells and subshells:
ionization energies 52
- 4.9 Solving the Schrödinger equation 54

CHAPTER 5 CHEMICAL BONDING

- 5.1 Bonding revision 58
- 5.2 Lewis structures for covalent molecules – 1 60
- 5.3 Lewis structures for covalent molecules – 2 62
- 5.4 The shapes of molecules – 1 64
- 5.5 The shapes of molecules – 2 66
- 5.6 Molecular orbital theory – 1 68
- 5.7 Molecular orbital theory – 2 70
- 5.8 Bond polarity – 1 72
- 5.9 Bond polarity – 2 74
- 5.10 Ionic bonding revisited 76
- 5.11 Covalent or ionic bonds? 78

CHAPTER 6 SOLIDS

- 6.1 Metallic solids: bonding and properties 82
- 6.2 Ionic solids: bonding and properties 84
- 6.3 Giant covalent solids 86
- 6.4 Delocalization 88
- 6.5 Metallic solids: structures 90
- 6.6 Ionic solids: structures 92
- 6.7 More about crystal structures 94

CHAPTER 7 CHANGES OF STATE AND INTERMOLECULAR FORCES

- 7.1 States of matter 98
- 7.2 Changes of state and the forces between particles 100
- 7.3 Polar molecules and dipole-dipole forces 102
- 7.4 Dispersion forces 104
- 7.5 Hydrogen bonding 106
- 7.6 Further effects of intermolecular forces 108
- 7.7 Phase diagrams 110

CHAPTER 8 GASES

- 8.1 Gases: three basic ideas 114
- 8.2 Ideal gases 116
- 8.3 Molar volume of an ideal gas 118
- 8.4 The movement of gas molecules 120
- 8.5 Real gases 122

CHAPTER 9 REACTING MASSES AND VOLUMES

- 9.1 Calculating masses involved in reactions 126
- 9.2 Further mass-to-mass calculations 128
- 9.3 Finding empirical formulae 130
- 9.4 Calculations involving gases 132
- 9.5 Solution concentrations 134
- 9.6 Using titration to measure concentration 136
- 9.7 Acid-base titration calculations 138

CHAPTER 10 THERMOCHEMISTRY

- 10.1 Chemical reactions and energy 142
- 10.2 Enthalpy changes 144
- 10.3 Enthalpy changes examined in detail 146
- 10.4 Calorimeters: measuring enthalpy changes 148
- 10.5 Standard enthalpy changes and Hess's law 150
- 10.6 Hess's law examples 152
- 10.7 Some important enthalpy changes 154
- 10.8 Born-Haber cycles 156
- 10.9 Bond enthalpy 158
- 10.10 Bond enthalpies and bonding 160

CHAPTER 11 CHEMICAL EQUILIBRIUM

- 11.1 The nature of dynamic equilibrium - 1 164
- 11.2 The nature of dynamic equilibrium - 2 166
- 11.3 Le Chatelier's principle - 1 168
- 11.4 Le Chatelier's principle - 2 170
- 11.5 The equilibrium constant K_c 172
- 11.6 An experimental determination of K_c 174
- 11.7 The equilibrium constant and yield 176
- 11.8 Gas mixtures and the equilibrium constant K_p 178
- 11.9 Heterogeneous equilibria 180
- 11.10 Solubility products and precipitates 182

CHAPTER 12 ACID-BASE EQUILIBRIUM

- 12.1 Acids and bases and their properties 186
- 12.2 Acids and bases and proton transfer 188
- 12.3 Aqueous hydrogen ion concentration and pH 190
- 12.4 Strong acids 192
- 12.5 Weak acids 194

12.6	Strong bases	196
12.7	Weak bases	198
12.8	Acid–base titrations – 1	200
12.9	Acid–base titrations – 2	202
12.10	Buffer solutions	204
12.11	Buffer solutions: calculations	206
12.12	Lewis acids and bases	208

CHAPTER 13 REDOX EQUILIBRIUM

13.1	Redox: oxidation and reduction	212
13.2	Oxidation numbers – 1	214
13.3	Oxidation numbers – 2	216
13.4	Redox reactions and titrations	218
13.5	Oxidants and reductants	220
13.6	Redox and electrochemical cells	222
13.7	Standard electrode potentials – 1	224
13.8	Standard electrode potentials – 2	226
13.9	Non-standard conditions	228
13.10	Using redox reactions: galvanic cells	230
13.11	Using redox reactions: electrolytic cells	232
13.12	Rusting	234
13.13	Principles of metal extraction	236

CHAPTER 14 SPONTANEOUS CHANGE TOWARDS EQUILIBRIUM

14.1	Spontaneity and spreading	240
14.2	Entropy – 1	242
14.3	Entropy – 2	244
14.4	Standard Gibbs energy change	246
14.5	Gibbs energy and chemical equilibrium	248
14.6	Gibbs energy and metal extraction	250

CHAPTER 15 CHEMICAL KINETICS

15.1	Reaction rate	254
15.2	Some practical techniques	256
15.3	Instantaneous reaction rate	258
15.4	Reaction rate and collision theory	260
15.5	Rate equations and order of reaction	262
15.6	Using order to find reaction mechanisms	264
15.7	Using calculus to find order	266
15.8	Activation energy and the Arrhenius equation	268
15.9	Catalysis	270
15.10	Heterogeneous catalysis	272
15.11	Homogeneous catalysis	274

INORGANIC CHEMISTRY

CHAPTER 16 THE S-BLOCK ELEMENTS

16.1	Group I and Group II metals: an overview	280
16.2	Some group trends	282
16.3	Reactions with water and oxygen	284
16.4	The s-block oxides and hydroxides	286
16.5	The s-block halides	288
16.6	Carbonates and hydrogencarbonates	290
16.7	The s-block nitrates and sulphates	292
16.8	Anomalous behaviour of lithium and beryllium	294
16.9	The s-block elements: flame tests and living systems	296

CHAPTER 17 Trends across a period

- 17.1 Period 3: sodium to argon 300
- 17.2 Melting points, bonding, and structure 302
- 17.3 Effects of atomic size 304
- 17.4 Reactions with oxygen 306
- 17.5 Acid–base character of the oxides 308
- 17.6 The oxoacids 310
- 17.7 The chlorides of Period 3 312
- 17.8 The hydrides: from ionic to covalent 314

CHAPTER 18 THE HALOGENS

- 18.1 Group VII elements: an overview 318
- 18.2 Manufacture and uses 320
- 18.3 Halogens and halides: redox behaviour 322
- 18.4 Halogens in solution 324
- 18.5 The hydrogen halides 326
- 18.6 Some ionic halides 328

CHAPTER 19 THE P-BLOCK ELEMENTS

- 19.1 The p-block elements to be studied 332
- 19.2 Group III: boron and aluminium 334
- 19.3 Group III: the acidity of aluminium compounds 336
- 19.4 Group IV: carbon to lead 338
- 19.5 Group IV: the chemistry of the elements – 1 340
- 19.6 Group IV: the chemistry of the elements – 2 342
- 19.7 Group V: nitrogen and phosphorus – 1 344
- 19.8 Group V: nitrogen and phosphorus – 2 346
- 19.9 Three important industrial processes 348
- 19.10 Group VI: oxygen and sulphur – 1 350
- 19.11 Group VI: oxygen and sulphur – 2 352
- 19.12 Group VIII: the noble gases 354

CHAPTER 20 THE TRANSITION METALS

- 20.1 The elements titanium to copper 358
- 20.2 Iron and steel 360
- 20.3 Manufacture and uses of four transition metals 362
- 20.4 Variable oxidation states – 1 364
- 20.5 Variable oxidation states – 2 366
- 20.6 Catalytic activity 368
- 20.7 Transition metal complexes: key facts 370
- 20.8 Transition metal complexes: some reactions 372
- 20.9 Isomerism in transition metal complexes 374
- 20.10 Other reactions of complex ions 376
- 20.11 Coloured ions 378

ORGANIC CHEMISTRY

CHAPTER 21 INTRODUCTION TO ORGANIC CHEMISTRY

- 21.1 Organic chemistry and the carbon atom 384
- 21.2 Organic molecules 386
- 21.3 Structural isomerism 388
- 21.4 Functional groups 390
- 21.5 The reactions of organic compounds – 1 392
- 21.6 The reactions of organic compounds – 2 394

CHAPTER 22 ALKANES AND ALKENES

- 22.1 The oil industry: fractionation 396
- 22.2 Fractional distillation and Raoult's law 398
- 22.3 The oil industry: cracking 400
- 22.4 The alkanes 402
- 22.5 Pluses and minuses of combustion 404
- 22.6 Bonding in alkenes 406
- 22.7 Alkenes and addition – 1 408
- 22.8 Alkenes and addition – 2 410
- 22.9 Converting alkenes to alcohols 412
- 22.10 The polymerization of ethene 414
- 22.11 The mechanism of polymerization 416
- 22.12 Bonding in methane 418

CHAPTER 23 ARENES

- 23.1 The unique character of benzene 422
- 23.2 Halogenation of arenes 424
- 23.3 Nitration and nitrobenzene 426
- 23.4 The effect of an existing functional group 428
- 23.5 The Friedel–Crafts reaction 430
- 23.6 Sulphonation of benzene 432

CHAPTER 24 ORGANIC HALOGENO COMPOUNDS

- 24.1 Polar carbon–halogen bonds 436
- 24.2 Reactions with hydroxide, cyanide, and ammonia 438
- 24.3 Rates and reaction mechanisms 440
- 24.4 Elimination reactions and uses of halogeno compounds 442

CHAPTER 25 ALCOHOLS

- 25.1 An introduction to alcohols 446
- 25.2 Polarity in alcohols 448
- 25.3 Primary, secondary, and tertiary alcohols and dehydration 450
- 25.4 Oxidation of alcohols 452
- 25.5 Phenols and ethers 454
- 25.6 Alcohols with more than one —OH group 456

CHAPTER 26 ALDEHYDES AND KETONES

- 26.1 Introduction to the carbonyl group 460
- 26.2 Reduction of aldehydes and ketones 462
- 26.3 Condensation reactions 464
- 26.4 Oxidation of aldehydes 466
- 26.5 Some worked examples from analysis 468
- 26.6 The triiodomethane (iodoform) reaction 470

CHAPTER 27 CARBOXYLIC ACIDS AND THEIR DERIVATIVES

- 27.1 An introduction to carboxylic acids 474
- 27.2 Acyl chlorides and acylation 476
- 27.3 Esters – 1 478
- 27.4 Esters – 2 480
- 27.5 Amides 482
- 27.6 Condensation polymerization: polyesters 484
- 27.7 Condensation polymerization: polyamides 486
- 27.8 Reduction of acid derivatives 488

CHAPTER 28 AMINES AND AMINO ACIDS

- 28.1 Organic nitrogen compounds 492
- 28.2 Aliphatic amines 494
- 28.3 Aromatic amines 496
- 28.4 Phenylamine and diazotization 498
- 28.5 Amino acids 500
- 28.6 Amino acids and optical activity 502
- 28.7 Some advanced ideas 504

CHAPTER 29 ORGANIC SYNTHESIS: CHANGING THE CARBON SKELETON

- 29.1 The synthesis of ibuprofen 508
- 29.2 Grignard reagents and other organometallics 510
- 29.3 The Diels–Alder reaction 512
- 29.4 Revisiting polymerization – 1 514
- 29.5 Revisiting polymerization – 2 516

CHAPTER 30 BIOCHEMISTRY

- 30.1 Lipids 520
- 30.2 Carbohydrates: monosaccharides 522
- 30.3 Carbohydrates: disaccharides 524
- 30.4 Carbohydrates: polysaccharides 526
- 30.5 Proteins 528
- 30.6 Enzymes – 1 530
- 30.7 Enzymes – 2 532
- 30.8 Nucleic acids – 1 534
- 30.9 Nucleic acids – 2 536
- 30.10 Nucleic acids – 3 538
- 30.11 Metabolism 540

CHAPTER 31 TECHNIQUES OF PREPARATION, SEPARATION, AND IDENTIFICATION

- 31.1 Using simple apparatus 544
- 31.2 Electrophoresis 546
- 31.3 Chromatography – 1 548
- 31.4 Chromatography – 2 550
- 31.5 Mass spectrometry 552

CHAPTER 32 SPECTROSCOPY AND STRUCTURE

- 32.1 Atomic spectroscopy 556
- 32.2 Ultraviolet and visible spectroscopy 558
- 32.3 Infrared spectroscopy – 1 560
- 32.4 Infrared spectroscopy – 2 562
- 32.5 Nuclear magnetic resonance (NMR) – 1 564
- 32.6 Nuclear magnetic resonance (NMR) – 2 566
- 32.7 Nuclear magnetic resonance (NMR) – 3 568

APPENDICES

- A.1 Standard form, uncertainty, and significant figures 572
- A.2 Equations and graphs 574
- A.3 Logarithms and exponentials 576
- B.1 The uses of computers in chemistry 578
- C.1 The periodic table 580
- C.2 Thermodynamic properties 582
- D.1 Answers to practice and exam questions 584
